An International conference such as the Modeling and Simulation Conference owes its success to many people. To list each of those who helped and the manner in which he helped would likely require a volume the size of the PROCEEDINGS. But we can mention some who have been of particular help.

First, our special thanks to the Instrument Society of America, and in particular, Mr. Fred Cushing, for help in many ways during the past year, and particularly for editorial help.

The editors wish to express sincere thanks to Professor R. G. Colclaser, Chairman of the Department of Electrical Engineering, University of Pittsburgh, for his support of this Conference in many ways.

The School of Engineering of the University of Pittsburgh has supported the Modeling and Simulation Conference in a variety of ways. Accordingly, the editors wish to thank Dean Max Williams.

A special thanks also to Nima Heagy, Annette Earl, and Sandy Adams, each of whom helped with enthusiasm and grace. An extra special thanks to Betty Victor for help in many ways.

A final thanks goes to all the others who organized sessions, chaired sessions, operated audio-visual equipment, made signs, helped with registration and handled efficiently those many situations and problems, some of which could have meant disaster to the Conference, but each of which were satisfactorily handled in a truly professional spirit.
