# Table of contents

<b>Editor's Preface</b> . . . . .	11
<b>Directory of Contributors</b> . . . . .	13
<b>Abbreviations</b> . . . . .	17
<b>Part I AN OVERVIEW</b>	
<b>1 Process possibilities for plant-cell cultures</b>	
M. W. Fowler	
1.1 Introduction . . . . .	21
1.2 Cell cultures in the synthesis of plant natural products . . . . .	22
1.3 Process approaches . . . . .	29
1.4 The future for plant-cell culture . . . . .	31
1.5 References . . . . .	31
<b>2 Process possibilities for animal-cell culture</b>	
R. E. Spier	
2.1 Introduction . . . . .	33
2.2 Tomorrow's technology . . . . .	34
2.3 Cells of the future . . . . .	35
2.4 Product areas . . . . .	36
2.5 Cells as products . . . . .	38
2.6 Beyond the year 2000 . . . . .	38
2.7 Animate meets the inanimate and vice versa . . . . .	39
2.8 Conclusions . . . . .	40
2.9 Suggestions for further reading . . . . .	40

**Part II CULTURE TECHNIQUES****3 Capsaicin biosynthesis in cell cultures of *Capsicum frutescens***

M. A. Holden, R. D. Hall, K. Lindsey and M. M. Yeoman

3.1	Introduction . . . . .	45
3.2	The capsaicin biosynthetic pathway . . . . .	46
3.3	Capsaicin production in developing fruit . . . . .	47
3.4	Capsaicin production in freely suspended cell culture. . . . .	48
3.5	The effects of cell immobilisation on capsaicin production . . . . .	49
3.6	Further treatments affecting capsaicin production . . . . .	50
3.7	Fate of radioactively labelled precursors to capsaicin . . . . .	55
3.8	Role of the cell wall . . . . .	58
3.9	Conclusions . . . . .	60
3.10	Acknowledgements . . . . .	61
3.11	References . . . . .	61

**4 The use of microcarriers in animal-cell cultures**

M. Butler, T. Hassell and A. Rowley

4.1	Development of microcarriers . . . . .	64
4.2	Theoretical capacity of microcarriers . . . . .	65
4.3	Kinetics of cell growth on microcarriers . . . . .	66
4.4	Nutrient limitations . . . . .	68
4.5	Accumulation of growth inhibitors . . . . .	70
4.6	Perfusion . . . . .	72
4.7	Conclusions . . . . .	73
4.8	References . . . . .	74

**Part III BIOREACTOR DESIGN****5 The effect of scale-up on plant-cell culture performance**A. H. Scragg, P. Morris, E. J. Allan, P. Bond, P. Hegarty,  
N. J. Smart and M. W. Fowler

5.1	Introduction . . . . .	77
5.2	Effect of the medium on plant-cell activity . . . . .	78
5.3	Cell line stability . . . . .	79
5.4	Effect of scale-up on cell line stability . . . . .	81
5.5	Conclusions . . . . .	86
5.6	References . . . . .	89

**6 Characteristics of immobilised plant-cell reactors**

F. Mavituna, J. M. Park, A. K. Wilkinson and P. D. Williams

6.1	Introduction . . . . .	92
6.2	General materials and methods. . . . .	94
6.3	Immobilisation of plant cells in a reticulated foam matrix . . . . .	94
6.4	Mass transfer . . . . .	95
6.5	Comparison of metabolic activity of freely suspended and immobilised plant cells . . . . .	104

6.6	Bioreactor configuration . . . . .	105
6.7	Bioreactor operation . . . . .	107
6.8	Bioreactor performance . . . . .	108
6.9	Conclusions . . . . .	113
6.10	Acknowledgements . . . . .	114
6.11	Nomenclature . . . . .	114
6.12	References . . . . .	114
<b>7</b>	<b>Reactor requirements for animal cells</b>	
	C. A. Lambe and A. G. Walker	
7.1	Introduction . . . . .	116
7.2	Hollow-fibre reactors . . . . .	117
7.3	Membrane sheet factors . . . . .	119
7.4	Ceramic matrices . . . . .	120
7.5	Encapsulation techniques . . . . .	120
7.6	Discussion . . . . .	121
7.7	References . . . . .	123
<b>8</b>	<b>Bioreactor design for growth of shear-sensitive insect cells</b>	
	J. Tramper, D. Joustra and J. M. Vlak	
8.1	Introduction . . . . .	125
8.2	Theory . . . . .	126
8.3	Experiments . . . . .	130
8.4	Conclusions . . . . .	134
8.5	Acknowledgements . . . . .	134
8.6	Nomenclature . . . . .	135
8.7	References . . . . .	136
<b>9</b>	<b>Large-scale hybridoma culture</b>	
	A. N. Emery, M. Lavery, B. Williams and A. Handa	
9.1	Introduction . . . . .	137
9.2	Basic cell-culture requirements . . . . .	138
9.3	'Shear' effects in agitation and aeration . . . . .	141
9.4	Design for process intensification . . . . .	143
9.5	Conclusions . . . . .	145
9.6	Acknowledgements . . . . .	146
9.7	References . . . . .	146
<b>Part IV PRODUCT POSSIBILITIES</b>		
<b>10</b>	<b>Bulk production of anchorage-dependent animal cells — comparative studies</b>	
	J. B. Griffiths, D. R. Cameron and D. Looby	
10.1	Introduction . . . . .	149

10.2	Productivity of animal cells . . . . .	150
10.3	Scaling-up of cell culture systems. . . . .	151
10.4	Requirements of a unit-process system . . . . .	152
10.5	Scale-up methods. . . . .	152
10.6	Bulk culture systems for anchorage-dependent cells . . . . .	153
10.7	Conclusions . . . . .	157
10.8	References. . . . .	159
<b>11</b>	<b>The large-scale production of monoclonal antibodies in airlift fermenters</b>	
	J. R. Birch, P. W. Thompson, R. Boraston, S. Oliver and K. Lambert	
11.1	Introduction . . . . .	162
11.2	Process plant . . . . .	163
11.3	Process requirements and operations . . . . .	165
11.4	Characterisation of growth and antibody synthesis . . . . .	167
11.5	Product recovery . . . . .	168
11.6	Future possibilities. . . . .	169
11.7	References. . . . .	170
<b>12</b>	<b>Alkaloid production by plant cells</b>	
	L. A. Anderson, J. D. Phillipson and M. F. Roberts	
12.1	Introduction . . . . .	172
12.2	Ornithine-derived alkaloids . . . . .	173
12.3	Tryptophan-derived alkaloids. . . . .	173
12.4	Phenylalanine-derived alkaloids . . . . .	180
12.5	Conclusions . . . . .	186
12.6	References. . . . .	187
<b>13</b>	<b>Ammonia production by immobilised cyanobacteria</b>	
	M. Brouers and D. O. Hall	
13.1	Introduction . . . . .	193
13.2	Material and methods. . . . .	195
13.3	Results and discussion . . . . .	196
13.4	Conclusions . . . . .	200
13.5	Acknowledgement . . . . .	201
13.6	References. . . . .	201
	<b>Part V PRODUCT RECOVERY AND SPECIAL TECHNIQUES</b>	
<b>14</b>	<b>Purification of protein products from cell cultures by fixed-bed adsorption</b>	
	H. A. Chase	
14.1	Introduction . . . . .	205
14.2	Fixed-bed adsorption as a unit operation in the downstream processing of proteins . . . . .	206
14.3	Factors important in the choice of adsorbent . . . . .	206

14.4 Apparatus for fixed-bed adsorption separations . . . . .	209
14.5 Optimisation of fixed-bed adsorption separations . . . . .	210
14.6 Disadvantages of a fixed-bed adsorption process. . . . .	213
14.7 Conclusion . . . . .	213
14.8 References . . . . .	214

## **15 Multiple purification of plant enzymes**

L. Jervis and E. R. Robertson

15.1 Introduction . . . . .	216
15.2 Purification of glycolytic enzymes . . . . .	218
15.3 Conclusions . . . . .	224
15.4 Acknowledgements . . . . .	225
15.5 References . . . . .	225

## **16 Release of secondary metabolites by plant-cell cultures**

A. J. Parr, R. J. Robins and M. J. C. Rhodes

16.1 Introduction . . . . .	229
16.2 Natural release mechanisms . . . . .	229
16.3 Products normally stored within the cell . . . . .	233
16.4 Conclusions . . . . .	235
16.5 References . . . . .	235

## **17 Electrical control of growth in plant-tissue cultures**

A. Goldsworthy and K. S. Rathore

17.1 Introduction . . . . .	238
17.2 Materials and methods . . . . .	239
17.3 Results . . . . .	239
17.4 Discussion . . . . .	242
17.5 Conclusions . . . . .	246
17.6 References . . . . .	247

## Editors' preface

Early in 1986 the Institution of Chemical Engineers published *Process Engineering Aspects of Immobilised Cell Systems*, a book which arose from a conference of the same name held in March 1984, at the University of Manchester Institute of Science and Technology (UMIST). The last paper at that meeting discussed the possible future applications of immobilised plant and animal tissue cells and provided the idea for a further conference to discuss, more broadly, the Process Possibilities for Plant and Animal Cell Cultures. This book is based on papers presented at the conference, which was held in Manchester in March 1986, and sponsored jointly by the North Western Branch of the Institution of Chemical Engineers and UMIST.

A range of new products is becoming available as a direct result of scientific and technological developments in the field of animal and plant cell culture. Some of these products are reaching the scale-up stage of their development and are therefore ripe for commercial exploitation. Many others, however, have not, as yet, been explored beyond the research laboratory. Nevertheless, it is timely to bring together the knowledge and experience of those working in the field, both at laboratory and pilot scales, in order to assess the long term possibilities for, and impediments to, the development of industrial processes which exploit the special properties of plant and animal cells.

This book is concerned primarily with those aspects of plant and animal cell cultures which will influence the future realisation of commercial processes. It is arranged in six parts to highlight various process aspects, rather than to concentrate on either plant or animal cell science, since many aspects of process development are common to all biotechnological systems. Each section has therefore been arranged to give a balance between plant cell and animal cell topics. As such it is hoped that this book will provide a sound basis for future developments and act as a guide to those entering either field.

The Institution of Chemical Engineers and UMIST express their thanks to all those who contributed to the conference and the publication of this book particularly the authors, session chairmen and Dr Jong Park and Mr Andy Wilkinson of UMIST for their help at the time of the conference. Thanks are also due to Mr Julio Faria (April Computing Executive) for his contribution to the technical organisation of the conference.

Finally, special thanks are extended to Dr Paul Williams of UMIST for his organisation of the poster session at the conference and for his contribution to the preparation of this book, and to Miss Angela Oates for the enthusiastic and efficient way in which she carried out the job of conference secretary.

COLIN WEBB  
FERDA MAVITUNA
