# Preface

Industrial structure optimization is a process of coordinating the development of different industries and meeting the increasing demand of the society by better combining and allocating resources. The practice of economic development and industrial transfer has proved that continuously promoting and rationalizing industrial structure has two advantages: accelerating the speed of economic development and realizing more economic benefits.

This book is based on several scientific research projects on optimizing and upgrading industrial structure and many case studies. Briefly speaking, it is the result of the authors' long efforts in the field of industrial structure optimization and its applications. The book contains two parts divided into 12 chapters. The first part (Chapters 1 through 8) is a brief theoretical introduction of regional industrial structure optimization, including the production and development of industrial structure theory, evolution laws of industrial structure, rationalization and upgrading of industrial structure, main factors of industrial structure upgrading, input-output analysis of industrial structure, regional industrial structure and selection of regional leading industries, and the mathematical model of regional industrial structure. The second part (Chapters 9 through 12) includes four case studies. They are approaches and measures of China's industrial structure upgrading during the "11th five-year plan"; the key points, ideas,

measures of Jiangsu Province's industrial structural adjustment; main paths and strategies of Jiangsu Province's industrial structural adjustment; and a study on optimization and an upgrading of the industrial structure in M City, respectively.

This book mainly applies grey systems theory to analyze problems on the basis of traditional methods of industrial structure optimization, which combines a new subject—grey systems theory and the theory of industrial structure optimization. We also bring out several models of grey regional industrial structure, including grey correlation priority analysis, an industrial structure order degree measurement model, a regional leading industries grey assessment model and turnpike model—an industrial structure adjustment model. These models not only develop application fields of grey systems theory, but also enrich the theories of industrial structure optimization.

Readers are welcome to point out and correct any errors and omissions in this book.

**Yaoguo Dang**

## Acknowledgments

The relevant researches done in the book were supported by the National Natural Science Foundation of China (No. 90924022 and No. 70901041), the Key Project of Philosophic and Social Sciences of China (No. 08AJY024), the Key Project of the Soft Science Foundation of China (2008GXS5D115), the Foundation for Doctoral Programs (200802870020), the Foundation for Humanities and Social Sciences of the Chinese National Ministry of Education (No. 08JA630039), the Key Project of the Soft Science Foundation of Jiangsu Province (No. BR2008081), and the Foundation for Humanities and Social Sciences of Jiangsu Province (No. 07EYA017). The authors would like to acknowledge the partial support of the Science Foundation for the Excellent and Creative Group in Science and Technology of Nanjing University of Aeronautics and Astronautics and Jiangsu Province (No. Y0553-091). The authors appreciate and thank Professor Yi Lin for his help and Sheng Zhu, Yanyu Wang, Rui Ji, Wenting Wang, and Yu Chen for their assistance.

## Authors

**Dr. Yaoguo Dang** received a bachelor's degree in mathematics from Henan University in 1986, China. In 1991, he received a master's degree in applied mathematics from Zhengzhou University, China and a PhD in management science and engineering from Nanjing University of Aeronautics and Astronautics in 2005.

Dr. Dang is the director of the Department of Management Science and Engineering at the College of Economics and Management, Nanjing University of Aeronautics and Astronautics. He is the vice director of the Institute for Grey Systems Studies and also of the Post-Evaluation Center in Jiangsu Province. He also serves as the vice president of the Grey Systems Society of China. He is the secretary-general of the Chinese Agricultural Systems Engineering Youth Seminar. He is also an advisor for doctoral students in management science and engineering disciplines.

Dr. Dang has directed and participated in more than 30 research projects at provincial and national levels. He has published more than 100 research papers in national and international journals and more than 9 books. Over the years, he has been awarded national and provincial prizes nine times for his outstanding achievements in scientific research and applications. He has won many accolades for his excellent achievements. He was selected as the excellent young scholar of Henan Province in 1998, and was recognized as

the best trainer by the “Qing Lan project” of Jiangsu Province in 2004. In 2006, he was selected as the trainer by the “333 high-level talents project” of Jiangsu Province. He was selected as the young leader in science and technology of “333 high-level talents” of Jiangsu Province in 2007.

Dr. Dang serves as a member of the editorial board of some professional journals such as *Journal of Grey System* (Taiwan), *Grey Systems: Theory and Applications* (USA).

**Dr. Sifeng Liu** received a bachelor's degree in mathematics from Henan University, China in 1981, an MS degree in economics, and a PhD in systems engineering from Huazhong University of Science and Technology, China, in 1986 and 1998, respectively. He was a visiting professor at Slippery Rock University in Slippery Rock, Pennsylvania and Sydney University in Sydney, New South Wales, Australia. At present, Professor Liu is the founding director of the Institute for Grey Systems Studies and the dean of the College of Economics and Management of Nanjing University of Aeronautics and Astronautics. He is also a distinguished professor and guide for doctoral students in the management science and systems engineering disciplines.

Dr. Liu's main research activities are in grey systems theory and regional technical innovation management. He has directed more than 50 projects at the national, provincial, and ministerial levels, has participated in international collaboration projects, and has published over 200 research papers and 16 books. Over the years, he has been awarded 18 provincial and national prizes for his outstanding achievements in scientific research and applications. In 2002, he was recognized by the World Organization of Systems and Cybernetics. Dr. Liu has won several awards such as the “National Excellent Teacher” in 1995, “Excellent Expert of Henan Province” in 1998, “Excellent Science and Technology Staff in Jiangsu Province” in 2002, “Expert Enjoying Government's Special Allowance” in 2000, “National Expert with Prominent Contribution” in 1998, “National Advanced Individual for Returnee” and “Achievement Award for Returnee” in 2003, and “Outstanding Managerial Personnel of China” in 2005.

Dr. Liu is a member of the evaluation committee of the Natural Science Foundation of China (NSFC), a member of the standing

committee for teaching in management science and engineering of the Ministry of Education, China. He also serves as an expert on soft science at the Ministry of Science and Technology, China. Professor Liu currently serves as the chair of the Technical Committee of the IEEE SMC on Grey Systems; as the president of Grey Systems Society of China (GSSC); as vice president of Chinese Society for Optimization, Overall Planning and Economic Mathematics (CSOOPEM); as co-chair of the Beijing Chapter and Nanjing Chapter of IEEE SMC; as vice president of the Econometrics and Management Science Society of Jiangsu Province (EMSSJS); and as vice president of the Systems Engineering Society of Jiangsu Province (SESJS); and as a member of the Nanjing Decision Consultancy Committee. He serves as the editor-in-chief of *Grey Systems: Theory and Application*, a member of the editorial board of over 10 professional journals, including *The Journal of Grey System* (UK); *Scientific Inquiry* (USA); *the Journal of Grey Systems* (Taiwan); *Chinese Journal of Management Science, Systems Theory and Applications*; *Systems Science and Comprehensive Studies in Agriculture*; and *the Journal of Nanjing University of Aeronautics and Astronautics*.

**Dr. Yuhong Wang** received a master's degree and PhD in management science from the College of Economics and Management, Nanjing University of Aeronautics and Astronautics in 2006 and 2010, respectively. He is currently with the School of Business, Jiangnan University, China. He was in the Department of Industrial Engineering, University of Arkansas, Fayetteville, Arkansas from August 2008 to August 2009 in a joint training PhD student program between the University of Arkansas and the Nanjing University of Aeronautics and Astronautics sponsored by China Scholarship Council.

Yuhong's research interests focus mainly on grey systems theory, evidential reasoning, and their applications in industrial economics and reliability engineering. He has participated in research projects and published research papers in international journals such as *Expert Systems with Applications*, *the International Journal of Computational Intelligence Systems*, *the Journal of Grey Systems*, *System Engineering Theory and Practice*. He also has participated in international conferences such as *IEEE SMC*, *RAMS*, and *IEEE GSIS*.

<b>PREFACE</b>	xvii
<b>ACKNOWLEDGMENTS</b>	xix
<b>AUTHORS</b>	xxi
<b>CHAPTER 1 ORIGIN AND DEVELOPMENT OF INDUSTRIAL STRUCTURE THEORY</b>	1
1.1 Meaning of Industrial Structure	1
1.2 Origin of Industrial Structure Theory	4
1.2.1 Ideological Origin of Industrial Structure Theory	4
1.2.2 Formation of the Industrial Structure Theory	5
1.3 Development of the Industrial Structure Theory	6
1.4 Research Field and Theoretical System of Industrial Structure	14
1.4.1 Research Field of Industrial Structure	14
1.4.2 Theoretical System of the Industrial Structure	16
<b>CHAPTER 2 EVOLUTION AND LAWS OF INDUSTRIAL STRUCTURE</b>	19
2.1 Related Theories on Industrial Structure Evolution	19
2.1.1 Conceptions of Three Industries	19
2.1.2 Law of Three Industrial Structure Changes: Petty–Clark Theorem	20
2.1.3 Kuznets Laws	21
2.1.4 Chenery and Others across National Models	23
2.2 General Trend in the Evolution of Industrial Structure	28
2.2.1 Stage of Industrialization Development	28

2.2.2	Conversion Process of Leading Industries	29
2.2.3	Internal Changes of Three Industries	31
2.2.4	Order of the Evolution of Industrial Structure	31
2.3	Empirical Analysis of the Typical Countries	32
<b>CHAPTER 3</b>	<b>RATIONALIZATION OF INDUSTRIAL STRUCTURE</b>	<b>41</b>
3.1	Meaning and Content of Industrial Structure Rationalization	41
3.1.1	Meaning of Industrial Structure Rationalization	41
3.1.2	Content of Industrial Structure Rationalization	44
3.2	Judging Benchmark for Industrial Structure Rationalization	46
3.2.1	Benchmark of International Standard Structure	46
3.2.2	Benchmark of Demand Structure	48
3.2.3	Benchmark of Balanced Ratio among Industries	50
3.3	Comparison and Determination of Industrial Structure Rationalization	51
3.4	Adjustment of Industrial Structure Rationalization	53
3.4.1	Process of Adjustment	53
3.4.2	Mechanism and Drive of Adjustment	54
<b>CHAPTER 4</b>	<b>ADVANCEMENT OF INDUSTRIAL STRUCTURE</b>	<b>57</b>
4.1	Dynamic Reasons of the Advancement of Industrial Structure	57
4.2	Functioning Mechanism of the Advancement of Industrial Structures	60
4.3	Judgment Standard of the Advancement of Industrial Structure	62
4.3.1	International Standard Structure of the Advancement of Industrial Structure	62
4.3.1.1	Standard Structure That Takes Production Values as Indicators	62
4.3.1.2	Standard Structure That Takes the Structures of Labor Force as Indicators	63
4.3.2	Relative Comparison and Discretion of the Advancement of Industrial Structure	64
4.3.2.1	Similarity Discretion Method	66
4.4	Economic Development Stage and the Level of Advancement of Industrial Structure	68
4.4.1	Industry Stage Theory of W.G. Hoffman	68
4.4.2	Economic Growth Stage Theory of Rostow	69
4.4.3	Economic Development Stage Theory of H.B. Chenery and M. Syrquin	71
4.5	Main Influencing Factors of the Advancement of Industrial Structure	71
4.5.1	Development Level of National Economy	72

4.5.2	Natural Resources Condition	72
4.5.3	Science and Technology Progress	73
4.5.4	Supply of Labor Force	74
4.5.5	Trade	75
4.5.6	Structure of Market Demand	76
4.5.7	Investment Structure	77
4.5.8	Industrial Policy	78
<b>CHAPTER 5</b>	<b>RELATIONAL ANALYSIS FOR INDUSTRIAL OUTPUT</b>	<b>81</b>
5.1	Fundamental Tools of the Industrial Structure	
	Relation Analysis	81
5.1.1	Input-Output Table	81
5.1.1.1	Physical Input-Output Table	82
5.1.1.2	Valuable Type Input-Output Table	83
5.1.2	The Input-Output Model	87
5.1.2.1	Calculation and Determination of Various Coefficients	87
5.1.2.2	Two Basic Input-Output Models	89
5.2	Analysis of the Relational Effect of the Industrial Structure	90
5.2.1	Analysis of Intermediate Demand and Intermediate Input	91
5.2.1.1	Intermediate Demand Rate	91
5.2.1.2	Intermediate Input Rate	92
5.2.1.3	Effects of the Intermediate Demand Rate and the Intermediate Input Rate	92
5.2.2	Breadth and Depth of Industry-Related Effects	95
5.3	Inter-Industry Effect Results Analysis	96
5.3.1	Industrial Sensitivity Coefficient and Influence Coefficient	96
5.3.1.1	Influence Coefficient	97
5.3.1.2	Sensitivity Coefficient	97
5.3.2	Industrial Production-Induced Coefficient and Final Demand-Dependent Coefficient	98
5.3.2.1	Production-Induced Coefficient	98
5.3.2.2	Industrial Final Demand-Dependent Coefficient	98
5.3.2.3	Comprehensive Employment and Capital Coefficient	99
<b>CHAPTER 6</b>	<b>REGIONAL INDUSTRIAL STRUCTURE</b>	<b>103</b>
6.1	Conception and Characteristic of Region	103
6.1.1	Regional Classification	103
6.1.1.1	Homogeneous Region	103
6.1.1.2	Nodes Region	104

	6.1.1.3	Planning Region	104
	6.1.2	Characteristics of Regions	104
6.2		Optimization of Regional Industrial Structure and Economic Development	105
	6.2.1	Meaning of Regional Industrial Structure	105
	6.2.2	Characteristics of Regional Industrial Structure	107
	6.2.3	Optimizing Regional Industrial Structure and Economic Development	108
6.3		Influence Factors of Regional Industrial Structure	111
	6.3.1	Regional Factor Endowment	111
	6.3.2	Demand-Oriented Structure	111
	6.3.3	Inter-Regional Economic Relation	112
	6.3.4	Regional Concentration Degree of Production	112
6.4		Economic Indicators to Analyze the Regional Industrial Structure	113
	6.4.1	Economic Indicators Reflecting the Specialization of Regional Industrial Structure	113
	6.4.1.1	Location Quotient	113
	6.4.1.2	Per Capita Output Coefficient and Per Capita Production Value Coefficient	114
	6.4.1.3	Regional and Inter-Regional Commodity Rate	114
	6.4.1.4	Coefficient of Regional Industrial Output	115
	6.4.2	Economic Indicators Reflecting the Convergence of Regional Industrial Structure	115
6.5		Regional Industrial Structure Policy	117
<b>CHAPTER 7</b>	<b>SELECTION OF REGIONAL LEADING INDUSTRY</b>		121
7.1		Summarization of Selection	121
	7.1.1	Conception and Function of Leading Industry	121
	7.1.2	General Properties of the Leading Industry	122
	7.1.2.1	Quick Growth Rate of Production	122
	7.1.2.2	High Location Quotient	123
	7.1.2.3	Good Market Prospect	123
	7.1.2.4	Great Industrial Correlation	124
	7.1.3	Realization of Leading Industry	124
	7.1.3.1	Self-Regulation of Market	124
	7.1.3.2	Active Intervention of the Government	125
	7.1.4	Evolution Process and Characteristics of Leading Industries	125
	7.1.4.1	Leading Industry Having Regional Nature	125
	7.1.4.2	Natural Process of Development of Leading Industry	126

7.1.4.3	Stage Property of Leading Industries	126
7.1.4.4	Sequence Succession of Evolution for Leading Industry	127
7.1.4.5	Multilevel of Leading Industries	128
7.2	Related Theories of Selection Benchmark of Regional Leading Industries	128
7.2.1	Hirschman Benchmark	128
7.2.2	Rostow Benchmark	129
7.2.3	Shinohara Benchmark	130
7.2.4	Too Dense Environment Benchmark and Rich Labor Benchmark	131
7.3	Principle of Selecting Regional Leading Industry	132
7.3.1	Maximization Principle of Income Elasticity of Demand	132
7.3.2	Maximization Principle of Rising Degree of Productivity	132
7.3.3	Maximization Principle of Industrial Correlation	133
7.3.4	Principle of Labor Force Employment	133
7.3.5	Principle of Dynamic Comparative Advantage	134
7.4	Measuring Indexes of Selecting Regional Leading Industry	135
7.4.1	Index of Industrial Correlation	135
7.4.2	Index of Income Elasticity of Demand	136
7.4.3	Index of Technological Progress	136
7.4.4	Index of Growth	137
7.4.5	Index of Employment	137
7.4.6	Index of GDP Proportion	137
<b>CHAPTER 8</b>	<b>OPTIMIZATION MODEL OF REGIONAL INDUSTRIAL STRUCTURE</b>	139
8.1	Model of Estimating the Order Degree of Industrial Structure	139
8.2	“Fast Track” Model of Industrial Structure Adjustment	141
8.3	Grey Dynamic Linear Programming Model of Industrial Structure Adjustment	145
8.4	Grey Clustering Decision-Making Model of the Selection of Regional Leading Industries	148
<b>CHAPTER 9</b>	<b>RESEARCH ON INDUSTRIAL STRUCTURE OPTIMIZATION AND UPGRADING IN M CITY, W PROVINCE DURING THE PERIOD OF “11TH FIVE-YEAR PLAN”</b>	155
9.1	Status Quo and Problems in the Industrial Structure of M City	156

9.1.1	Analysis of the Internal Structure of the Three Major Industries in M City	156
9.1.1.1	Analysis of the Internal Structure of the Primary Industry	156
9.1.1.2	Analysis of the Internal Structure of the Secondary Industry	157
9.1.1.3	Analysis on the Internal Structure of the Tertiary Industry	158
9.1.2	Problems in the Industrial Structure of M City	158
9.1.2.1	High Proportion of Employment in the Primary Industry	159
9.1.2.2	Single Internal Industrial Structure	159
9.1.2.3	Serious Lack of Development in the Tertiary Industry	159
9.1.2.4	Low Industrial Technology Level and Added Value	160
9.2	Main Influence Factors of the Industrial Structure Upgrading in M City	160
9.2.1	Impact of Science and Technology	160
9.2.2	Impact of Investment Structure	161
9.2.3	Impact of Labor Force	163
9.2.4	Impact of Industrial Policies	164
9.2.5	Impact of Natural Resources	165
9.2.6	Impact of Changes in Demand	166
9.3	Selection of Leading Industries in M City	167
9.3.1	Index System of the Selection of Leading Industries in M City	167
9.3.2	Selection of Leading Industries in M City	169
9.4	Industrial Structure Optimization of M City	175
9.4.1	Optimization of the Industrial Structure and Employment Structure of Three Major Industries in M City during the Period of 11th Five-Year Plan	175
9.4.2	Internal Structure Optimization Program of the Primary Industry in M City	181
9.4.3	Internal Structure Optimization Program of the Secondary Industry in M City	185
9.4.4	Internal Structure Optimization Program of the Tertiary Industry in M City	190

<b>CHAPTER 10 KEYSTONES AND IDEAS OF THE INDUSTRIAL STRUCTURE ADJUSTMENT IN S PROVINCE</b>	<b>195</b>
10.1 Current Situation and Problems in the Industrial Structure in S Province	195
