This CD and the software included on it have been designed to run on both Macintosh and Windows systems using a Web browser. System requirements vary depending on what you download from the CD. Please review all software readme files before installing or running any of the software included on this CD.

For more information about this CD please refer to the CD appendix at the back of this book.

Minimum System Requirements, Macintosh Platform

- ▶ Computer: 68030
- ▶ Memory: 8MB of RAM
- ▶ Platform: System 7.0 or higher
- ▶ Software: Web browser
- ▶ Hardware: 2X CD-ROM drive

Windows System Requirements

0054133

- ▶ Computer: 386 IBM PC-compatible
- ▶ Memory: 8MB of RAM
- ▶ Platform: Windows 3.1, NT, or 95
- ▶ Software: Web browser
- ▶ Hardware: 2X CD-ROM drive

CD Start Instructions

- 1** Place the CD-ROM in your CD-ROM drive.
- 2** Launch your Web browser.
- 3** From your Web browser, select Open File from the File menu. Select the CD-ROM (usually drive D for PCs and the desktop for Macs), then select the file called Welcome.htm.

PLEASE NOTE—USE OF THE DISC AND THE PROGRAMS INCLUDED ON THE DISC PACKAGED WITH THIS BOOK AND THE PROGRAM LISTINGS INCLUDED IN THIS BOOK IS SUBJECT TO AN END-USER LICENSE AGREEMENT (THE "AGREEMENT") FOUND AT THE BACK OF THE BOOK. PLEASE READ THE AGREEMENT CAREFULLY BEFORE MAKING YOUR PURCHASE DECISION. PURCHASE OF THE BOOK AND USE OF THE DISC, PROGRAMS, AND PROGRAM LISTINGS WILL CONSTITUTE ACCEPTANCE OF THE AGREEMENT.

**Dedicated to Dr. Jones and
Dr. Driscoll, two educators
who gave me the gift of
freedom to create.**

Acknowledgments

Writing a book takes the contribution of many voices, even if one author appears on the cover. I want to thank the people I worked with over the years who sharpened my thoughts about building and design in computer media. I am grateful to San Francisco State University and my students for the encouragement to develop courses around my twin loves of characters and communities, from which the outline of this book was formed. To Simon Hayes, my acquisitions editor and first contact at Ziff-Davis Press, thank you for everything from shaping the early material into a book outline to calling software vendors for inclusion on the CD—help beyond the call of duty. Angela Allen, my editor who started at ZD Press the same day I did, for continual encouragement through the months of writing. Special thanks to Richard Bartle for historical information about early MUDs and to Keith Elkin for kindly making screen snapshots from videos of his Habitat experiences.

As anyone who has tackled a large project knows, one's own community sees less and less of them over the months, especially as deadlines approach. I am looking forward to seeing more of my friends and supporting them as they have supported me, especially Lisa, Drew, Eli, and Ashia—thanks for café conversation and cappuccinos throughout the writing process.

I would also like to thank my parents for the many phone calls when I needed encouragement.

Introduction

The World Wide Web is in the early stages of an incredible transformation into the World Wide *Community*. No longer is the delivery of information or services the primary value on the Web: Sites are now struggling to form a bond with the people who visit their site to transform them from mere casual visitors into loyal, returning inhabitants. The people are becoming the real value of the Web. With the accelerated rate of change that we know as “Internet time,” this sweeping change will transform the Web in a very short time. Right now, Web travelers are searching for places to call home, and right now the popular sites are providing attractive communities where travelers are settling. Right now, your site can become one of these home spaces, developing a loyal following of repeat customers.

If you are involved in development, design, or management of Web sites on the Internet, then this book is for you. You already know that Web sites need every edge in attracting visitors and in keeping them interested in a site. A virtual community will create that attraction, build that loyalty, and give your site that edge. With *How to Program a Virtual Community* you’ll learn not only the practical, hands-on skills for running your community software, but also the design skills you need to create a truly attractive and interesting community.

How to Program a Virtual Community is the first comprehensive book that reveals the history, building blocks, and design principles for building and managing a virtual community. It is a hands-on guide to the construction of livable virtual communities using affordable software available today. While there are a few books in the marketplace that describe virtual communities, none give Web authors a construction guide for building human-friendly places using easy-to-learn, commercially available tools. This book shows you how to extend your one-way Web site into a dynamic, effective, ~~active~~ *active* community—even if you don’t know how to program.

Part 1 of this book is the foundation material that will give you an overview of virtual community design principles, history, and software. Here you will decide which community style is right for your site, and what software you will use to build it. The CD-ROM that accompanies this book contains everything you need to build your community.

Parts 2–7 lead you through the process of designing and creating your virtual community. One by one, the building blocks of community design are described in detail. Each part focuses on a single aspect of your community, taking you from concept to design to implementation in your chosen software package. Once you’ve chosen the software you will use, you can easily find the chapters that apply to you, and the extensive examples that are included on the CD-ROM. In Part 8 you’ll publish your virtual community on the Internet and connect it to your Web site.

In Part 9 you’ll find an overview of the fast-paced developments surrounding virtual community software and design, as well as projections about how trends, new features, and new ideas will affect your community. This information will prove invaluable to you as you steer your new community through the rapid developments on the Internet.

As you read this book, keep in mind that any text that is in **red** will be commands for you to type. The other colors of text are simply used to highlight parts of code or commands to make them easier for you to read. In program listings, words in **boldface** are keywords for you to type exactly as shown. Words in *italics* are placeholders that you should replace with the appropriate value indicated.

At <http://www.insideout.net/community/> you’ll find links to new virtual community companies as well as additions to the scripts included on the CD. If you have technical questions regarding the use of the CD software, contact techsupport@mcp.zdp.com. I would be very interested to hear about the community you built using this book, so send your comments to me at mpowers@insideout.net. Enjoy the book and your new community!

Part 1

What Is a Virtual Community?

Chapter 1: Meeting Your Neighbors in Cyberspace

Chapter 2: Three Types of Communities

Chapter 3: A (Very) Brief History of Virtual Community

Chapter 4: The Five Building Blocks of Virtual Community

Chapter 5: Unique Ideas for Virtual Communities

Table of Contents

Introduction	xvi	Exploring Three-Dimensional Spaces	15
Part 1		What Exactly Is a 3-D Space?	15
What Is a Virtual Community?		Is a 3-D Space Right for Your Web Site?	16

Running the Sony CP Browser Plug-in	60
How to Edit the World Description in Sony CP	61

Part 3

Avatars: Creating Costumes

Chapter 8: Making Avatars 64

Naming Avatars: Creating an Identity	67
Moving an Avatar	68
Creating a Costume	70
Acting in the Community: Using Props	71
Summary	72

Table of Contents

Chapter 9 Putting Avatars Together in perlMUD 74

Creating an Avatar	75
The <i>@pcreate</i> , <i>@password</i> , and <i>@name</i> Commands	75
The <i>look</i> and <i>@describe</i> Commands	77
Setting the Sex of the Avatar	78
Moving an Avatar	80
Moving Through Exits	80
Using the <i>examine</i> and <i>@teleport</i> Commands	81
Avatar Verbs: Using Props in perlMUD	82
Using the <i>get</i> and <i>drop</i> Commands	82
Seeing What You Are Carrying: The <i>inventory</i> Command	84

Chapter 10 Putting Avatars Together in The Palace 86

Creating an Avatar	87
Naming an Avatar Using Preferences	87
Using Avatar Expressions	87
Using the Face Palette	88
Typing in a Facial Expression	88
Moving an Avatar	88
Traveling within a Room	89
Using Doorways	90
Teleporting to Palaces and Rooms	90
Avatar Verbs: Using Prop Objects in The Palace	91
Getting and Dropping Props in a Room	91
Adding Costume Props to an Avatar	91
Creating Props	92
Saving Costumes Using the Macro Command	93

Chapter 11 Putting Avatars Together in Sony Community Palace 94

Using Avatars	95
Naming an Avatar Using Preferences	95
Choosing an Avatar from the Menu	96
Using Avatar Expressions	96
Moving an Avatar	97
Traveling within a Room	97
Walking, Flying, and Floating	98
Using Doorways	99
Teleporting to Other Worlds	99
Creating Avatars	100
Setting Up the Directories	100
Making a Body File	102

Part 4 Places to Go: Making Great Locations 106

Chapter 12 Developing Locations: Virtual Architecture 108

Choosing a Theme	110
The Purpose of Your Community	110
The World in a Mall: Borrowing from Real Life	111
Alternative Themes: Entertainment	112
Architecture for Avatars	112
Avatar Ergonomics	113
Navigation: Getting from Here to There	114
Connecting Rooms with Doors and with Other Rooms	115
Traveling Distances	115
Maps	116

Handling Traffic and Crowding	117
Making Areas Large Enough	118
Providing More than One Commons Area	119
Avatar Limits	119

Making a Home in the Virtual Community	119
Homesteading	120
Knowing Where Other People Are	120
Summary	121

Chapter 13 Putting Locations Together in perLMUD 122

Choosing a Theme	123
Know Your Tools	123
Setting the Message of the Day	124
Using the welcome.txt File to Provide Log-in Instructions	125
How to Build Places	126
Using <i>@dig</i> to Create Rooms	126
Using <i>@describe</i> to Describe a Room	127
Setting the Ownership of a Room	
Using <i>@chown</i>	128
Setting the <i>linkok</i> , <i>buildok</i> , and <i>jumpok</i> Flags	128
Design for Navigation	130
Creating an Exit with <i>@open</i> and <i>@describe</i>	130
Handling Traffic	132
Creating Homes	133
Using <i>@link</i> to Give an Avatar a Home	133
Setting the <i>abode</i> Flag to Make a Home	134

Chapter 14 Putting Locations Together in The Palace 136

Choosing a Theme	
Setting the Entrance Room	137
How to Script a Welcome Message	139
How to Build Places	141
Avatar Sizes	141
Creating Rooms Using the Client Editor	141
Design for Navigation	143
Making Doors Using the Client Editor	144
Common Door Layouts	145
Creating a Panorama	145
Moving Inside Buildings	145
Traveling Outside	147
Handling Traffic	148
Setting Preferences for Maximum Server and Room Occupants	148
Setting Maximum Occupants for a Single Room	149
Getting a Daily Report of Use	150
Creating Homes	150

Chapter 15 Putting Locations Together in Sony Community Place 152

Knowing the Material	153
How to Build Places	154
Creating Rooms and Areas	154
Doors and Archways for Navigation	156
Getting a Daily Report of Use	157
