SYSTEMATIC OUTLINE OF THE ENCYCLOPEDIA

The Systematic Outline of the Encyclopedia, which is supplementary to the Subject Index, groups the contents of the Encyclopedia by article title under the main subject headings used in commissioning the Encyclopedia. These headings, which are summarized in the Classified List of Contents below, are further subdivided into appropriate subheadings as each subject dictates. The reader is thus presented with a general overview of the contents of the Encyclopedia. Some articles inevitably relate equally well to more than one heading. Rather than make an arbitrary decision as to which section they belong, each article has been listed wherever appropriate.

Article titles can be located by two methods: (a) by referring to the Classified List of Contents below and then looking up the appropriate Subject Area in the main part of the Analytical List of Contents, or (b) by consulting the Alphabetical List

of Contents given overleaf.

The publisher wishes to thank Professor Singh for help in overseeing the collation of the Systematic Outline which was prepared by Danny Dicks, Debbie Puleston and other members of the editorial staff of the Encyclopedia from the original commissioning plans of the Subject Editors.

CLASSIFIED LIST OF CONTENTS

1. THEORY

A. Modelling and Simulation

- (i) Physical Systems Modelling
- (ii) Identification
- (iii) Estimation Theory
- (iv) Signal Processing
- (v) Simulation Techniques
- (vi) Model Simplification

B. Systems and Control Theory

- (i) Fuzzy Systems
- (ii) Pattern Recognition
- (iii) General Systems Theory
- (iv) Stability Theory
- (v) Realization Theory for Linear and Nonlinear Systems
- (vi) Classical Control
- (vii) Computer-Aided Design of Control Systems
- (viii) Multivariable Control
- (ix) Distributed Parameter Systems
- (x) Discrete Systems
- (xi) Self-Tuning Regulators and Adaptive Control

C. Optimization and Operations Research

- (i) Static Optimization
- (ii) Dynamic Optimization
- (iii) Optimal Control
- (iv) Game Theory
- (v) Stochastic Systems
- (vi) Robustness and Sensitivity

D. Complex Systems Theory

- (i) Hierarchical Optimization and Control
- (ii) Decentralized Control
- (iii) Model Simplification for Complex Systems
- (iv) Singular Perturbations
- (v) Stability of Interconnected Systems
- (vi) Team Theory

2. TECHNOLOGY

(i) Technology of Actuators

- (ii) Special Actuators Required in Communications, Power Generation, Nuclear Industry, etc.
- (iii) Measurements in the Control Area
- (iv) Intelligent Instrumentation
- (v) Measurements in the Biological Area
- (vi) Environmental Measurements
- (vii) Measurements in Chemistry
- (viii) Database Management
- (ix) Distributed Control

3. APPLICATIONS

A. Technological Applications

- (i) Process Control in Chemical Industries (Paper, Cement, Sugar, etc.)
- (ii) Control of Power Generation and Distribution
- (iii) Control in Aeronautics and Space
- (iv) Robotics

B. Semitechnological Applications

- (i) Road Traffic Control
- (ii) Air Traffic Control
- (iii) Other Transportation Systems
- (iv) Manufacturing Systems
- (v) Building Systems
- (vi) Utility Systems (Gas, Electricity, Water)
- (vii) Communication Systems
- (viii) Management Systems
- (ix) Health Care Systems
- (x) Social Effects of Automation

C. Nontechnological Applications

- (i) Modelling and Control of Biological Systems
- (ii) Biomedical Engineering
- (iii) Environmental Systems
- (iv) Agricultural Systems

4. HISTORY

- (i) History of Theoretical Techniques
- (ii) History of Applications
- (iii) History of Organizations

ALPHABETICAL LIST OF CONTENTS

This list enables the reader to locate all the headings and subheadings in the Systematic Outline. Major subdivisions of the Outline are indicated by capitals.

Actuator Technology	2.i
Adaptive Control and Self-Tuning Regulators .	1.B.xi
Aerospace Control	
Agricultural Systems	3.C.iv
Air Traffic Control	3.B.ii

ANALYTICAL LIST OF CONTENTS

1. THEORY

A. Modelling and Simulation

Physical Systems Modelling (*i*)

Dynamic-Systems Modelling: Basic Principles and Lumped-Parameter Systems **Dynamic-Systems Modelling:** Distributed-Parameter Models and Discretization Ordinary Differential Equations Stationary Time Series and Their Spectra

(ii) Identification

Estimation or Identification Extended Least Squares Method Fuzzy Identification of Systems Fuzzy Systems: Identification Fuzzy Systems: Simultaneous Identification and Control Generalized Least Squares Method Identification: Asymptotic Theory Identification: Basic Problem Identification: Correlation Methods Identification: Experiment Design Identification: Frequency-Domain Methods Identification: History Identification: Instrumental Variable **Techniques** Identification: Least Squares Method Identification: Maximum Likelihood Method

Identification: Model Structure

Determination

Identification: Practical Aspects Identification: Pseudo-Random Signal

Method Identification: Recursive Methods Identification: Time-Domain Methods Identification: Transient- and Frequency-Response Methods

Parameter Estimation: Basic Problem Parameter Estimation: Fuzzy Logic Validation of Identified Models Validation of Simulation Models:

General Approach

Validation of Simulation Models: Statistical Approach

(iii) Estimation Theory

(a) Nonlinear Estimation Theory

Extended Kalman Filter Nonlinear Estimation Nonlinear Estimation Theory: Asymptotic Analysis Methods Nonlinear Estimation Theory: Implications for Stochastic Control Nonlinear Filtering and Quantum **Physics** Nonlinear Filtering: Computational Aspects Nonlinear Filtering: Iterated Ito Integral **Expansions**

(b) Linear Estimation with Given Second-Order Statistics

Block Matrix Formulae Constant-Parameter Systems: Fast Algorithms Discrete-Time Processes: Innovations Distributed Parameter Systems: Estimation and Control Kalman Filter Formulae: Variations Kalman Filtering: Applications Kalman Filtering: State-Space Models for Discrete-Time Processes Matrix Triangularization: Givens Transformations Matrix Triangularization: Householder Transformations Parameter Estimation: Basic Problem Parameter Estimation: Fuzzy Logic Random Number Generation Smoothing Algorithms Smoothing Algorithms, Two-Filter State-Space Modelling: Square Root Algorithms State-Space Modelling: State-Space Transformation

(iv) Signal Processing

Adaptive Signal-Processing Algorithms: An Introduction Adaptive Signal-Processing Algorithms: Convergence and Tracking Adaptive Signal-Processing Algorithms: On-Line Detection of Abrupt Changes Adaptive Signal-Processing Algorithms: Rare Events and Large Deviations

See also: Measurements in the Control Area (2.iii)

(v) Simulation Techniques

(a) Simulation Methodology: General

Simulation in Automatic Control
Simulation Methodology and Model
Manipulation
Simulation Methodology and Systems
Control and Management
Simulation Methodology: Top-Down
Approach
Validation of Simulation Models:
General Approach
Validation of Simulation Models:
Statistical Approach

(b) Simulation Modelling Systems Formalisms

Model Specification Interfaces Models as System-Theoretic Specifications Simulation Models: Taxonomy Simulation Taxonomy

(c) Simulation Modelling Formalisms

Formalism Simulation Modelling Formalism, Activity-Based Simulation Modelling Formalism: Arithmetic Relators Simulation Modelling Formalism: Bond Graphs Simulation Modelling Formalism: Cellular Automata Simulation Modelling Formalism, Discrete Arithmetic-Based Simulation Modelling Formalism, Event-Based Simulation Modelling Formalism: Extended Petri-Net Graphs Simulation Modelling Formalism: Heterarchical Systems Simulation Modelling Formalism: Hierarchical Decomposition Simulation Modelling Formalism: Markov Chains Simulation Modelling Formalism: Ordinary Differential Equations Simulation Modelling Formalism: Partial Differential Equations Simulation Modelling Formalism, Process-Based Simulation Modelling Formalism: Systems Dynamics

Simulation Modelling Formalism:

Transaction-Flow Techniques

Simulation Models of Autopoiesis:

Variable Structure

(d) Simulation Model Management

Databases for Simulation
Simulation: Model Base Organization
and Utilization
Simulation Model Management
Objectives and Requirements

(e) Model Behavior Generation/Simulation Techniques

Global and Regional Models
Model Behavior: Type Taxonomy,
Generation and Processing Techniques
Moving-Boundary Models: Numerical
Solution
Ordinary Differential Equation Models:
Numerical Integration of Initial-Value
Problems
Ordinary Differential Equation Models:
Symbolic Manipulation
Partial Differential Equation Models:
Numerical Solution

Random Number Generation Random Variate Generation

Sensitivity Analysis and Simulation Experimentation

Simulation and Optimization Interfacing Simulation Objectives: Experimental Frames and Validity

Simulation: Time-Advance Methods Stochastic Simulation: Experiment Design

Stochastic Simulation: Initial Transient Techniques

Stochastic Simulation: Variance-Reduction Techniques Structure/Parameter Identification by Simulation Experimentation

(f) Simulation Software and Computer Systems

Flowcharting in Computing

Cellular Space Models: Simulation
Methods
Combined Discrete and Continuous
Models: Firmware
Computer Architecture
Computer Memory Hierarchy
Computer Systems Simulation Models
Discrete-Event Simulation:
Microprocessor Architectures
Distributed Computer Systems
Distributed Model Simulation Software
Distributed System Models: Distributed
