Acknowledgements

The Editor acknowledges with thanks the contributions made to the development of the Thesaurus by the following:

The Trustees of the Leverhulme Trust, whose financial support made the project possible.

The Educational Resources Information Center (ERIC) for permission to use information from the Thesaurus of ERIC Descriptors. The format and size of the first edition of the British Education Thesaurus leans heavily on the twenty years of development embodied in the 11th edition of the ERIC Thesaurus.

The University of Leeds Computing Service and, in particular, to Terry Screeton, whose programming provided a sure guide to the Editor in handling data.

The University of Southampton Computing Service which provided computing resources and a most helpful information service and especially to Simon Lane who wrote additional facilities to make the task of preparing the data easier.

The Hartley Library, University of Southampton, whose Librarian, Bernard Naylor, made its resources freely available, even through the most difficult period of library rebuilding.

To all members of the Management Committee of the British Education Index for their encouragement and support.

Those who contributed their specialist skills as users and producers and, in particular, to those who put in a most concentrated spell of work at the evaluation meeting.

David N. Allum, Department of Education and Science,

Marjorie Bocking, Cambridge Institute of Education,

Alan Cooper, National Educational Resources Information Service,

John Hutchins, University of East Anglia,

Vivian Johnston, University of Leeds,

David E. Jones, University of Sheffield,

Roy W. Kirk, University of Leicester,

Stephen Pearson, Microelectronics Education Support Unit,

Maureen Quigley, Microelectronics Education Support Unit,

Philip W. Sheffield, University of Leeds,

Larry Stuart-Jones, University of London Institute of Education.

Those who sent in contributions to the evaluation process:

From the University of Leeds: Colin J. Titmus

From the University of London Institute of Education: Claire Drinkwater, Peter Moss, Stephen Pickles.

From the University of Southampton: Tony King.

From the University of Warwick: Pat Avann.

Indexing and Retrieval in the British Education Databases

The material currently available and wholly indexed by the British Education Database derives from two main sources, both initially devised and developed by the Librarians of Institutes and Schools of Education (LISE). The first and largest source is an index of periodical literature, the British Education Index (BEI), first published for LISE by the Library Association and available in printed form from 1954 to date. Publication was taken over by the British National Bibliography in 1972 and, after reorganisation of the national library service, became the responsibility of the British Library Bibliographic Services Division until 1986, when responsibility passed to the University of Leeds. The information from 1976 onwards is available for online searching, as well as in printed form.

In addition to periodical literature, a subject index to research resulting in the award of a higher degree in British or Irish universities or polytechnics is available in the British Education Theses Index (BETI). This index covers degrees awarded from 1950 to date and is developed from information published by ASLIB. BETI is a microfiche publication issued by LISE and the whole database is available for online searching.

The new British Education Thesaurus (BET) has been compiled in order to develop a language which would be common to both Indexes and which might also be of use to other database producers working in the field of education. Both the BEI Management Committee and LISE felt that the user community was being increasingly less well served by the very diversity of languages which users had to learn in order to make a successful search of English-language databases. In the absence of any national body to coordinate specialist efforts and to give a lead to the producers, the University of Leeds and LISE could only attempt to devise a language which, in their considered view, would be helpful and user friendly and to agree to use it for their respective publications. They hoped that publication might

attract other database producers to consider cooperation. In the event, some other producers showed interest in the new language even before publication and are both using and contributing to it. Such cooperation and agreement to adopt a common terminology can only be helpful to users who wish to search British databases.

No national thesaurus has ever been produced for British education and users are at a disadvantage thereby. True to LISE's belief that users should be given the greatest possible help and encouragement in using research tools, BETI always had an internal thesaurus. This was subsequently made available to users in computer printout form and is one of the source documents for BET. But, the BETI language was a pre-coordinate language, not highly specific and devised for searches using a printed format only, and was judged to be unsuitable for indexing in a time of increasing reliance on online searching. So the search for a suitable model widened. As will be immediately apparent, the new British language owes a massive debt to the Thesaurus of ERIC Descriptors, which became the other major source document for the new British Education Thesaurus. The choice of this language was made partly because so many British users were familiar with and regular users of the ERIC database and partly because it had, over its twenty year history, proved itself a flexible and constantly updated indexing tool. Apart from its record of service to the American community, ERIC demonstrated an interest in international cooperation.

After considerable correspondence, a meeting was held in Washington, D.C. in August 1986 at which representatives of the main English-language education databases were present. ERIC representatives hosted the meeting and the Australians, British and Canadians were present. The participants formed a new group, the InterEd Working Group, which agreed to work together to try to develop a family of English-language, education-related databases, using a common indexing language with national

variants. The Australian Education Index was already published; the Thesaurus of ERIC Descriptors appeared in its 11th edition in 1987 and the Canadians and British went away to work on their own thesauri. The first result of this international cooperative effort to become available to users will be an international online database to be mounted on DIALOG alongside ERIC. The British contribution became available in the summer of 1988 and the Australian and Canadian contributions should be available in 1989. To serve this new contribution to research, the InterEd Working Group hope to combine their national thesauri in an international thesaurus which will list common descriptors and national variants. Within this country, the Microelectronics Education Support Unit (MESU) and the National Educational Resources Information Service (NERIS) have chosen to take their education vocabulary from BET. Both bodies are handling a great deal of classroom material and are using a wider vocabulary than that required for purely education indexes but, where there is overlap users will be served by a common terminology.

In a field as nationally based as education, national variants are essential, even while a lot of

the vocabulary is held in common. To take the oldest source of confusion, a 'Public School' in Britain is very different from a 'Public School' in the United States. There are, too, as well as the same or similar terms to express different concepts, different terms for the same concepts. For example, the American 'Daily Living Skills' is more familiar in Britain as 'Life Skills'. These, though, are minor variants when compared with the solid core of terminology used in common in the four English-speaking countries and it is the firm belief of the producers of this thesaurus that users will be best served by a language that is international in scope.

Future development of the thesauri in the four countries will be subject to consultation between Vocabulary Review Groups in each. Vocabulary Status Reports are regularly received from ERIC and are emerging from the compilers of the Canadian Education Thesaurus, so that comment is international and attempts are being made to reach a consensus. It is hoped to set up a similar review body in this country after publication of this first edition of the BET so that second and subsequent editions will benefit from international as well as national expertise.

Thesaurus Construction and Format

The British Education Thesaurus (BET) comprises two main parts, of which the first is an alphabetical descriptor display of the terms used for indexing and searching in the merged BEI/BETI databases, and for the MESU and NERIS databases, followed by a Rotated Descriptor Display.

ALPHABETICAL DESCRIPTOR DISPLAY

This alphabetical word-by-word display provides a variety of information for each descriptor. Some or all of the following elements are given for each term: a Scope Note (SN); Add Date; Used For (UF); Use (USE); Broader Terms (BT); Narrower Terms (NT); Related Terms (RT). Each of these elements is explained in more detail below.

SN (Scope Note)

A Scope Note defines the usage of a descriptor and may be used to restrict or clarify the intended use of a term. Special indexing notes are often included and, while these are primarily directed at indexers, the notes will also help searchers by their warnings or recommendations.

ENGINEERING SCIENCE EDUCATION

SN Preprofessional study of engineering at the secondary school level

SCHOOL VISITS

SN Excursions outside the school made by groups of pupils and teachers for educational purposes

(The Scope Note defines the use for indexing of a term which is capable of wider interpretation)

EDUCATIONAL MEDIA

SN Equipment and materials used for communication in teaching (Note: use a more specific term, if possible)

(This Scope Note not only directs indexers to be more specific in the descriptors they choose (unless the document being indexed is itself very broad and non-specific) but also directs the user's attention to the display of narrower and related terms)

ETHNIC BIAS

SN Prejudicial opinions about particular groups because of their ethnic origins (Note: do not confuse with 'Ethnic Discrimination' which refers to actions based on those attitudes)

(This Scope Note is a signpost equally to indexers and searchers to think carefully about the author's subject or their search topic and to be precise in their formulation)

SCHOOL BOARDS

SN Governing bodies for elementary schools in England and Wales established under the Elementary Education Act, 1870 (Note: do not confuse with 'School Boards (Scotland)')

(This Scope Note sets the usage for a descriptor in a particular historical context, whilst warning against confusion with a new usage in a different context)

UF (Used For)

This element is used to define the vocabulary control exerted by the thesaurus in order to resolve the problems of synonyms or near synonyms in

natural language. UF references most often represent 1) synonymous or variant forms of the same term:

FLEXIBLE WORKING HOURS

UF Flexitime
Flexitime

or 2) specific terms that, for the purposes of indexing, are grouped under a more general term. This may even include divergent aspects of a topic that are usefully grouped together:

LATERAL DOMINANCE

UF Handedness
Laterality
Left Handedness
Right Handedness

USE

The USE reference is the reciprocal of the UF and refers indexers and searchers from a non-preferred term to a preferred term or terms.

IMITATIVE LEARNING

Use Observational Learning

MAGNETIC STORAGE

Use Computer Storage Devices
Magnetic Discs
Magnetic Tape

BROADER/NARROWER TERMS

The BT/NT notations are used to indicate a hierarchical relationship between a class and its subclasses. The two elements in a display point in both directions, to the more general (BT) and to the more specific subgroups (NT):

MAINTAINED SCHOOLS

BT Schools
NT Aided Schools
Controlled Schools
Voluntary Schools

Sometimes a term may have more than one BT:

MANAGEMENT BY OBJECTIVES

BT Administration
Management Systems

Note: Since indexing is done to the most specific level of the document being considered, a search of the Narrower Terms will not reveal documents which give consideration only to the broader aspects of a topic. Conversely, a search of references under the broader heading will not reveal specific, narrower references. The hierarchical displays are designed to draw the attention of indexers and

searchers to the possibilities of the control language.

RT (Related Term)

The terms included in the descriptor displays as Related Terms have a conceptual relationship to the main term but not the direct class/subclass relationship of the BT/NT relationship. They are included in the display to remind the user of related concepts and aspects under which useful material may be indexed:

ONLINE CATALOGUES

RT Bibliographic Records
Library Catalogues
Machine Readable Cataloguing

PAIRED READING

RT Cues
Reading Difficulties
Reading Skills
Reading Strategies
Reinforcement

PARENTHETICAL QUALIFIERS

A Parenthetical Qualifier is used to identify a particular indexable meaning of a homograph. In other words, it discriminates between terms which may, out of context, be confused with each other, for example:

AWKWARDNESS (PHYSICAL)
COMMUNICATION (THOUGHT TRANSFER)
TABLES (DATA)

These may be either preferred terms or 'use' references.

ADD DATES

These dates indicate the date at which the descriptor was added to the thesaurus. For this first edition of BET, the chosen date was set at March 1988, as the revision date by which terminology already in use was finally approved for inclusion.

IDENTIFIERS

BET does not list names of persons, corporate bodies, geographical locations, tests, projects, etc., though these are required indexing and search terms. It is hoped to produce a Name Identifier file at a later date but, in the meantime, users are reminded that documents about, for example, Matthew Arnold or education in Plymouth are indexed under these specific names. In general, AACR2 rules are followed, thus: 'University of Bristol' not 'Bristol University' is used, and 'Norway' not 'Norge'. The yet unpublished file maintains consistency in indexing and many names can be traced with the help of the British Library Name Authority List.

NEW AND EXPERIMENTAL DESCRIPTORS

A notable feature of the language of education is the rapidity and facility with which new terms are coined and come into general use. It is planned to update the published thesaurus regularly but, in the interim, users are referred to the notes on New Descriptors published in the quarterly parts and annual cumulations of the British Education Index.

Some terms can be recognised as having a useful currency very quickly, for example, 'National Curriculum' was obviously going to be a required descriptor for indexing and searching. Other terms may have alternative formulations and only an accumulated experience gained from the literature will indicate which is to be preferred, for example 'Speech Synthesisers' or 'Voice Synthesisers'? International consultation will be most valuable here. Yet another category of terms is that comprising descriptors which adequately identify concepts but which may recur only infrequently in the literature, for example 'Titrimetric Analysis'.

Where there is uncertainty, the terms are provisionally included in BET with a Scope Note saying 'In use as an experimental (981) descriptor.' These terms may be used for indexing and searching but are not provided with a full descriptor display. It is not intended that such terms should remain in the 'experimental' category for more than one edition of the thesaurus.

TYPE OF DOCUMENT/DESCRIPTIVE STATEMENT TERMS USED IN BEI/BETI

These terms are not indexable headings in the printed versions, unless used in the main descriptor string, but can help to define a computer search:

Bibliographies
Case Studies
Followup Studies
Literature Review
Longitudinal Studies
Questionnaires
Research Notes
Research Reports
Review Article
Surveys

Comparative Treatment
European Perspective
Feminist Perspective
Historical Section (Note: use when there is a substantial historical section in a document not wholly devoted to an historical treatment of a topic)
Historical Treatment
Marxist Perspective

AGE/EDUCATIONAL LEVEL DESCRIPTORS

These terms are not indexable headings in the printed versions, unless used in the main descriptor string, but can help to define a computer search:

EDUCATIONAL LEVEL

Preschool Education	0-4
Nursery School Education	2-5
Early Childhood Education	5-7
Infant School Education	5-7
Primary Education	5-9/11
Primary Secondary Education	5-16
Middle School Education	9-13
Secondary Education	11/13-16/18
Sixth Form Education	16-18
Sixteen to Nineteen Education	16-19
Further Education	16+ (vocational)
Adult Education	18+ (nonvocational)
Adult Basic Education	18+ (basic skills)
Higher Education	18+ (degree, etc.)

AGE LEVEL

Infants	0-2
Young Children	0-8
Children	0-12
Preschool Children	2-4/5
Adolescents	13-17
Young Adults	18-30
Adults	18+
Middle Aged Adults	45-65
Older Adults	65+

SAMPLE BRITISH EDUCATION THESES INDEX ENTRY

French, A. J.

Transition from school to university — an environmental approach — a comparative study of students at the universities of Durham and Loughborough / by A. J. French 1983.

Thesis (Ph.D.) — Durham, 1983
Higher Education / Loughborough University of Technology / University of Durham / Student Attitudes / University Preparation / University Students

The education level or, if more appropriate, the age level descriptors appear first in the descriptor

string and indicate the educational level or age group under consideration. These terms are not indexable headings for manual searching, though they may be used to define a computer search. If appropriate, they can be used as major descriptors and then appear in the printed indexes for manual searching.

The next element of the descriptor contains the identifier terms, which may be geographical locators (e.g. 'London'); corporate bodies (e.g. 'Wiltshire County Council') or personal names (e.g. 'Plato'). These are all searchable both manually and by computer.

The third element comprises the indexable concepts found in the document and translated into the control language of BET. Wherever possible, they are precoordinate terms, e.g. 'Womens Education' (not 'Women' + 'Education') or 'Student Attitudes'. Where there is little material in the British databases, terms are not always precoordinated, e.g. 'American Indians' + 'History'.

For efficient searching, users are recommended to identify their search topic carefully and then to search the alphabetical descriptor display in order to fit their own chosen terminology to the language of BET. The Rotated Descriptor Display will help both to identify and structure terms. When a suitable short list of terms has been chosen, check the Scope Notes for a definition of the scope and limitation of the terms chosen and the list of Broader and Narrower Terms to see whether the topic can be more accurately defined. Finally, check the list of Related Terms to see whether there are possibly other descriptors relevant to the search topic.

Remember that, while every attempt has been made to use natural language, the thesaurus is part of an international cooperative project and allowances must be made for this. Remember too that 'natural language' changes and evolves very rapidly indeed and that authors frequently use alternative terms simply for stylistic reasons.

Some of the terms used in BET are matched by few or no references in BEI and BETI. In some cases, these terms have been created in advance of literature indexed which uses them and because they are warranted by international cooperative experience. In many other cases, these terms are included because they are in use in the MESU and NERIS databases and an online search of these systems will bring to light relevant references.

ROTATED DESCRIPTOR DISPLAY

The Rotated Descriptor Display provides an alphabetical index to all the words found in descriptors, both preferred and non-preferred, in BET. A single word term will file in only one location, a two-word term will file in two locations, and so on. Interfiled examples of 'Community Colleges' and 'Maintenance Grants' will illustrate:

	ACCESS TO EDUCATION
	ADULT EDUCATION
COLLEGES OF TRAINING	ADVANCED EDUCATION
	ALLOWANCES
	AWARDS
COMMUNITY COUNTY	COLLEGES
	COLLEGES

	TUITION GRANTS
	UNDERGRADUATE STUDY
	VILLAGE COLLEGES

The Rotated Descriptor Display is useful in determining all usages of a particular word in the thesaurus, without respect to its position in a multiword descriptor or USE reference. This display also tends to group related terms when they may be separated in the main Alphabetical Display.

This grouping helps indexers to examine the thesaurus more thoroughly to seek out the most specific Descriptors. It also helps searchers to translate their topics into the language of the system and indexers and the thesaurus editor in the structuring of new terms.

How to Search Effectively using the British Education Thesaurus

1. Identify your chosen topic, using your own terms.
2. 'Translate' your topic into the subject index terms given in BET — you may find the Rotated Descriptor Display at the end of the Thesaurus helpful for this.
3. List the most appropriate descriptors and find them in the Alphabetical Descriptor Display in the main part of the Thesaurus.
 - a. Read the Scope Note (SN) to find how BET uses the terms.
 - b. Check the Broader Terms (BT), Narrower Terms (NT) and Related Terms (RT) to find other possible Descriptors relevant to your search topic.
 - c. List these possible Descriptors.
 - d. Check these Descriptors in the same way.

4. Make a final check list of Descriptors.

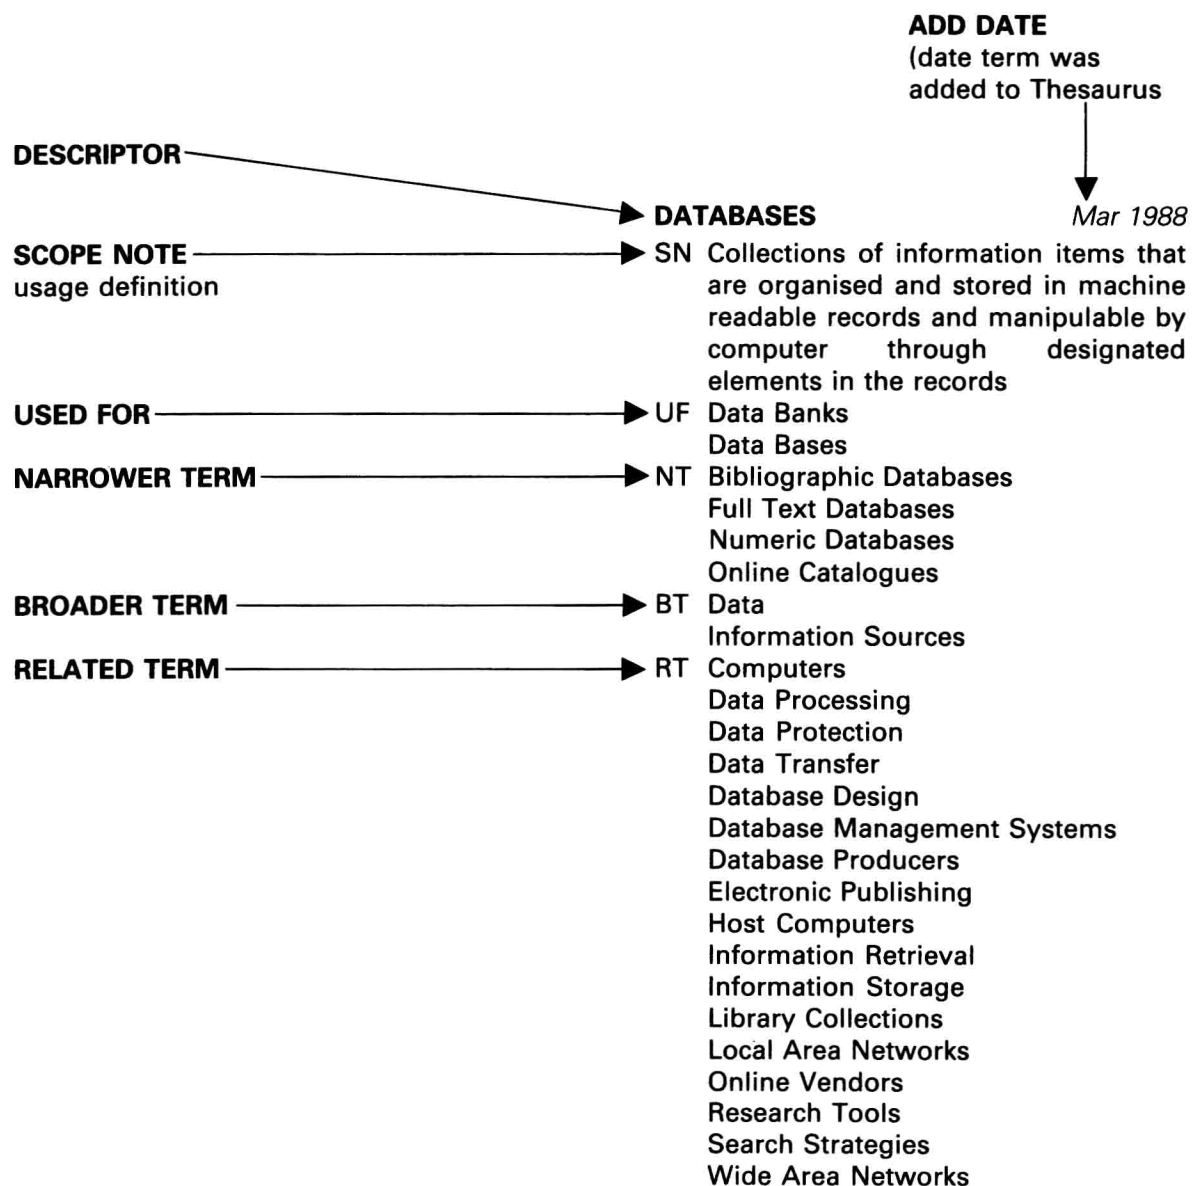

For a manual search of the British Education Index (BEI), vol. 22 onwards, look up the printed version.

For a computer search of BEI and BETI, follow the directions of your particular library or information service for searching the DIALOG database.

For a computer search of the MESU and NERIS databases, follow the directions given by these bodies for searching their databases.
