# **INFRARED GRATING COLLECTION**

**1980  
CUMULATIVE  
NUMERICAL  
INDEX**

**No. 1 - 59000**

**Sadtler Research Laboratories**

The publication of the physical data of the Sadtler Standard Spectra and the Sadtler Commercial Spectra is intended to be descriptive. The samples of the materials represented have come generally from other sources than our own laboratories and frequently without the donors' knowledge of their part in this publication.

On the other hand every effort is made by Sadtler Research Laboratories, a division of Bio-Rad Laboratories, Inc. to assure the reliability of the published spectra. When improved data is available or errors are called to our attention we revise and reissue the proper replacement spectra.

SADTLER RESEARCH LABORATORIES, A DIVISION OF BIO-RAD LABORATORIES, INC. DOES NOT WARRANT MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, OR MAKE ANY OTHER WARRANTY OR AGREEMENT EXPRESS OR IMPLIED WITH RESPECT TO THE SPECTRA CONTAINED HEREIN. IF ANY MODEL OR SAMPLE WAS SHOWN TO BUYER, SUCH MODEL OR SAMPLE WAS USED MERELY TO ILLUSTRATE THE ARTICLE AND NOT TO REPRESENT THAT ANY SPECTRA CONTAINED HEREIN WOULD CONFORM TO THE MODEL OR SAMPLE.

## INTRODUCTION

The 1980 Cumulative Numerical Index for Infrared Grating Standard Spectra applies to all compounds for which Sadtler Research Laboratories has issued infrared reference spectra through February, 1980. The entries for grating infrared spectra follow the series 1 through 38000 and 49001 through 59000. The spectra numbered in the intervening series 38001P through 48487P are previously published prism infrared spectra which are not available in the grating format and have been re-issued and renumbered in the Sadtler Standard Grating Spectra publication to provide maximum available data to the user of this collection. Thus the P suffix always indicates a renumbered prism spectrum.

This index also includes the spectrum numbers of the same compounds as published in the companion Sadtler publications of 59,000 infrared prism spectra, 48,000 ultraviolet spectra, 32,000 60 MHz nuclear magnetic resonance spectra and 7,000 carbon-13 NMR spectra.

In addition to Sadtler spectra, the column of this index titled NMR includes the reference number of spectra published by Varian Associates and JEOL (Japan Electron Optics Laboratory Co., Ltd.). The Varian numbers are preceded by the letter V and the JEOL numbers either by the symbol \* representing 100 MHz spectra, the letter F for  $^{19}\text{F}$  spectra and the letter J for 60 MHz spectra.

The inclusion of the reference spectrum numbers for a variety of instrumental techniques provides the user with the ability to rapidly locate all available spectral data for compound identification or characterization.

This index may also be used in conjunction with the corresponding Sadtler Standard Grating Spec-Finder® publication to identify the reference spectrum numbers located by that comparison technique or other computerized data search and comparison methods such as the IRIS® system. Space limitations prevent inclusion of cross-references to the collections of Raman spectra, 100 MHz nuclear magnetic resonance spectra, fluorescence spectra and infrared vapor phase spectra, therefore each of these publications contains its own individual set of indexes.

The naming of the chemical compounds in the Sadtler reference spectra collections closely follows the Chemical Abstracts (CA) system of nomenclature, whereby the parent name is assigned on the basis of a predefined order of functionality and the arrangement of substitutions to the parent compound in alphabetical order. Recently CA has revised its nomenclature system but the new alterations are not incorporated in the Sadtler indexes at this time. In addition to the systematized names, many cross-references to frequently used trivial names are also included in this index.

The infrared spectra of some compounds were run in various media or physical forms when this additional information was pertinent to spectroscopic identification. These alternative spectra are designated at the end of the name in the index entry by the following abbreviations:

B	-	Between Salts (neat)
C	--	Cell
F	--	Film
G	-	Gas
K	-	KBr
M	--	Mineral Oil Mull
S	--	Solution

Since the Sadler indexing system is totally computerized, certain limitations are imposed in nomenclature symbolism. Deviations which appear in the printed index are as follows:

/	(slash)	-	Read as parenthesis, bracket, or brace
□	(lozenge)	-	Read as indication of superscripting (See last of the examples on this page)
PR		-	Read as "prime". Therefore 2PR is read as 2'.
*	(asterisk)	-	Also read as "prime"

Lack of provision for Greek letters, super or subscripts (except as noted above) or lower case letters causes the following changes from normal notation:

A	-	Read as a or $\alpha$
B	-	Read as b or $\beta$
G	-	Read as g or $\gamma$
D	-	Read as d or $\delta$
O	-	Read as o, ortho or oxygen
M	-	Read as m or meta
N	-	Read as normal or nitrogen
P	-	Read as p, para or phosphorus
S	-	Read as s (symmetrical) or sulfur
D & L	-	Still retain their original significance when used in conjunction with carbohydrates.

Some examples illustrating the variations to be encountered are shown below.

#### Chemical Abstracts System

s-Triazine, 4-amino-6-(p-bromoanilino)-1,2-dihydro-2,2-dimethyl-,

Benz[a]anthracene-7,12-dione

Chrysene[6,5-d]oxazole

Spiro{cyclopropane-1,9'-fluorene}, 2-acetyl-,

Tricyclo[3.3.1.1<sup>3,7</sup>]decane

#### Sadtler Index

S-TRIAZINE, 4-AMINO-6-/P-BROMOANILINO/-1,2-DIHYDRO-2,2-DIMETHYL-,

BENZ/A/ANTHRACENE-7,12-DIONE

CHRYSENO/6,5-D/OXAZOLE

SPIRO/CYCLOPROPANE-1,9PR-FLUORENE/, 2-ACETYL-,

or

SPIRO/CYCLOPROPANE-1,9\*FLUORENE/, 2-ACETYL-,

TRICYCLO/3.3.1.1<sup>3,7</sup>/DECANE
