SECOND EDITION

MANAGEMENT: Concepts, Methods, and Applications

E8563527

Preface

Organizations in recent years have provided us with more rapid transportation, improved health care, all forms of electronic gadgetry, and conveniences far beyond anything imagined even a decade ago. However, management continues to be one of the greatest challenges to society. There have been many ominous signs of weakness in national and international organizations and their management. The growth rate of productivity in the United States is on the decline, the automotive and other major industries are suffering gigantic losses (primarily due to foreign competition), national student test scores indicate that our educational systems need revamping, the quality of work life in organizations is improving too slowly, gigantic corporations seem to be losing their creativity, and conflict among nations threatens the whole of humanity. These needs urgently demand a greater understanding of how to manage organizations—the power elements of a society. The book is devoted to aiding in this process.

This edition is intended to overcome the common complaints that students make about the introductory management course; i.e., that the concepts and principles are too abstract and general. However, management is an eclectic discipline that integrates knowledge from many sources, including the behavioral, quantitative, and traditional sciences. On top of all this diversity, we assume that management is generic. It encompasses all organizations from public to private. When in addition, it is assumed that all organizations are involved in common planning, organizing, staffing, directing, and controlling processes, the level of abstraction becomes extremely high, with limited meaning for the novice.

I have attempted to overcome this vagueness and the feeling that management consists of a group of often unrelated principles in three ways:

1. I have used a series of models that serve as a framework to integrate the basic processes and concepts of management. The value and use of models are explained in Chapter 3, followed by a paradigm encompassing the primary internal and external elements of an organization. This holistic systems approach is coupled with the traditional management framework (planning, organizing, staffing, directing, and controlling) as a basis for subdividing the general topic into smaller pieces for analysis in separate chapters. Every major topic in the book is supported by an integrative model that ties together the knowledge relating to the subject under consideration. Models are presented on decision making, planning, human behavior, motivation, communication, staffing, organization structure, leadership, and even control. The integrative control model (see Figure 10-1) is the first one that I have seen in a management text.

Most management texts report the research findings, common management practices, and approaches of major contributors to the field with limited analysis

or integration. Since many of these are conflicting or not obviously interrelated, the student cannot readily see how they fit together and what relevance they have, which results in a disjointed collection of principles with few application guidelines. This approach ignores the value of models which can serve as “walking sticks” to help the learner along the path to understanding.

2. I have included in each chapter of this text specific implications on how the theoretical concepts should be applied so as to close the link between theory and practice. These implications are presented in boxes throughout the book and listed at the end of each chapter in place of the typical summary. The theoretical material in the chapter provides the underpinning for the practical propositions contained in the conclusion. The common practice is, again, to present findings derived from a variety of sources. Too frequently the student is left with the task of determining what meaning these findings have for how he or she can function as a manager. Also, following each chapter are two short cases so students can practice applying the concepts.

3. I have made finite distinctions in management methods and processes based on the level of the organization and the responsibilities of the managers involved. One reason many management texts are so abstract is that planning, organizing, staffing, directing, and controlling are presented as if these same concepts have the same significance for all managers or supervisors. Little distinction is made between the planning methods, concepts, and responsibilities of top management versus the same methods, concepts, and responsibilities for a first-line supervisor. Taking planning as an example, Chapter 8 covers the strategic planning of top management, and Chapter 9 deals with the concepts and methods of internal planning that are normally the responsibility of middle managers. Distinguishing the types of environments, categories of organizations, levels of management, and how these call for the use of different methods and approaches adds specificity and reality to what can otherwise be highly generalized concepts.

In this edition, I have made several outline changes. After a trial and error process extending over nearly 20 years, I have become convinced that the broader macro responsibilities of the manager (planning, implementation, and control) need to be presented before looking at more micro concepts (motivation, staffing, groups, and other aspects of human behavior). For this reason, after the framework for the course is developed in the first three chapters, the next eight cover decision making, planning, implementation, and control, which are at the heart of how a results-oriented manager functions in an organization. How to use human resources more effectively in attaining goals is covered in Chapters 12 through 16 followed by three chapters on organization structure and two on leadership. The final two chapters deal more directly with the reader by providing guidelines on management careers and changes likely to occur in the future.

In this edition, the following new chapters or major concepts are introduced:

- The basic responsibilities of a manager are viewed as obtaining results through a continuing "management cycle" involving planning, implementation, and control.
- A separate chapter is included on staffing, or the management of human resources. This chapter clarifies the responsibilities of the line manager and the personnel department in handling the staffing functions, with the emphasis being on how managers can improve their performance in this area.
- Many of the more recent approaches covering organization structure and management methods are included. Japanese management practices, such as the use of quality circles, are examined in detail. Also, the rational approach to management, which views organizations as unified, goal-oriented entities, is tempered by including the views of writers such as Jeffrey Pfeffer who consider organizations as power arenas where the ebb and flow of coalitions determine what is done rather than any overriding management logic.
- Considerable effort has been devoted to providing a realistic chapter on careers. The purpose is to aid students in making better career decisions, to acquaint them with what life will be like in work organizations, and to assist them in making career plans.
- The final chapter covering management and the future examines conditions that are likely to exist in the next 30 years and the implications these will have for planning, organizing, staffing, directing, and controlling in the years ahead.

Completing a book provides a feeling of accomplishment that somehow compensates for the hundreds of hours involved in putting it together. It is truly an organizational team effort, as many people besides the author are responsible for the final outcome. Michael Zamczyk, SRA's acquisition editor, provided valuable advice and kept me on track. Ann Wood did a thorough, professional job of copyediting and met unbelievable time schedules. Jim Rosenzweig and Monty Kast provided expert guidance and assistance in the overall outline of the book and the editing of the early chapters. Barbara Marinelli and Teresa Breinholt typed most of the manuscript. And my wife demonstrated her usual patience and understanding while I was holed up on evenings and weekends in my basement office.

January, 1982

Contents

PART ONE: INTRODUCTION

1

Chapter 1: The Nature of Management 3

The Nature of Organizations	4
Managers and Organization	6
Management versus Managers	11
Two Models of Organizations and the Management Process	12
The Processes of Management	15
A Model of Management	18
The Status of Management as a Science	19
Avoiding the Myths of Management	21
Conclusions and Implications	22
Questions for Study and Discussion	24

Chapter 2: The Development of Management Thought 29

Placing Practice in Historical Perspective	30
Origins of Management Thought	30
Management before the Industrial Revolution	31
The Industrial Revolution	32
The Scientific Management Movement	35
The Process Approach to Management	38
Other Administrative Theorists	43
The Human Relations Movement	43
Quantitative Approaches	47
Systems Theory and Management	49
The Modern Contingency Approach	50
Conclusions and Implications for Managing	51
Questions for Study and Discussion	52

Chapter 3:	
Models for Understanding Organizations	57
Models and Conceptualization	58
Systems Approach to Management	59
Systems and Situational Models	65
A Situational Model	66
Major Variables Internal to the Organization	68
Environmental Variables	72
Situational Analysis	77
Conclusions and Implications	80
Questions for Study and Discussion	80

PART TWO: DECISION MAKING	85
----------------------------------	-----------

Chapter 4:	
Decision-Making Concepts	87
Decision Making as a Process	88
How Decisions Are Made	90
Steps in the Problem-Solving Process	92
Limitations to the Rational Problem-Solving Process	100
Involving Others in the Decision Process	103
Other Constraints on Decision Making	106
A Contingency Decision-Making Model	108
Conclusions and Implications	111
Questions for Study and Discussion	112
Chapter 5:	
Quantitative Tools in Decision Making	117
Basic Concepts of Management Science	118
Advantages and Limitations of Operations Research	121
Tools of Management Science	122
Cost Considerations in Decision Making	125
Situational Classifications in Decision Theory	133
Decision Trees	140

Conclusions and Implications	145
Questions for Study and Discussion	145

PART THREE: PLANNING**149**

Chapter 6:	
The Management Cycle: Plan, Implement, Control	151
The Management Cycle	152
Ingredients in the Management Cycle	152
Planning, Execution, and Control	
Phases	155
Planning Trade-Offs	157
Approaches to Planning	162
Approaches to Implementation	167
Approaches to Control	168
Types of Control	170
Conclusions and Implications	173
Questions for Study and Discussion	174
Chapter 7:	
Evaluating Factors External to the Organization	179
Evolution of the Environmental Concept	180
Methods of Classifying Environmental Variables	183
The Macroevironment	186
The International Environment	195
The Environment as an Independent Variable	198
Social Responsibility	200
Conclusions and Implications	204
Questions for Study and Discussion	205
Chapter 8:	
Strategic Planning of Top Management	211
The Perspective of Top Management	212
Steps in Strategic Planning	215
Top Management's Responsibility for Policy Formation	229
Organizing for Strategic Planning	233
Conclusions and Implications	235
Questions for Study and Discussion	236
Appendix	236

Chapter 9: Internal Planning of Middle Management	247
Relating Goals to Objectives	248
The Importance of Goals	250
Guides to Establishing Goals	250
Management by Objectives	254
Approaches to Operational Planning	257
Programming Methods	260
Conclusions and Implications	272
Questions for Study and Discussion	273

PART FOUR: CONTROLLING

279

Chapter 10: Control Methods and Processes	281
Attributes of Control	282
Control as a Process	285
An Organizational Framework for Viewing Controls	287
Guides for Controlling	297
Organizing for Control	301
Conclusions and Implications	302
Questions for Study and Discussion	303

Chapter 11: Financial Controls and Information Systems	309
Financial Ratios	310
Bearing Responsibility for Costs	313
Budgeting as a Management Tool	314
Budget Components	316
Methods for Measuring Results	326
Design of Management Information Systems	328
The Major Problems of MIS	331
Conclusions and Implications	334
Questions for Study and Discussion	335

PART FIVE: HUMAN RESOURCES**339**

Chapter 12:	
Understanding the Individual	341
The Primacy of the Individual	342
Assumptions about Human Beings	342
The Learning Process	347
Personality	349
Attitudes	350
Perception	351
Motives: The <i>Whys</i> of Behavior	357
A Model of Human Behavior	358
Conclusions and Implications	360
Questions for Study and Discussion	361
Chapter 13:	
Motivation and Job Design	367
Significance of Motivation	368
The Need Approach to Motivation	369
Environmental Theories of	
Motivation	373
Expectancy Theories of Motivation	377
A Composite Contingency Model of	
Motivation	379
Satisfaction and Dissatisfaction	380
Money and Motivation	382
Job Design	383
Job Enlargement	385
Job Enrichment	386
Conclusions and Implications	388
Questions for Study and Discussion	390
Chapter 14:	
Groups	395
The Nature of Groups	396
Different Types of Groups	398
Why People Join Groups	400
The Structure of Groups	401
Differences among Groups	409
Management of Groups	410
Conclusions and Implications	413
Questions for Study and Discussion	414

Chapter 15:	
Communication	419
The Significance of Communication	420
The Communication Process	422
Methods of Communication	422
Communication Breakdown	424
Conclusions and Implications	440
Questions for Study and Discussion	441
Chapter 16:	
The Managing of Human Resources:	
Staffing	447
The Human Resource Systems	448
Variables Affecting Human Resource	
Systems	450
Responsibilities of the Personnel	
Department	451
Planning and Selection Processes	453
Internal Human Resource Systems	460
Conclusions and Implications	469
Questions for Study and Discussion	470

PART SIX: ORGANIZING

473

Chapter 17:	
Organization Structure and Design	475
The Organizing Process and Structure	476
Benefits of a Good Organization	478
Formal Steps in Organizing	478
The Organization Chart	480
Step 1: Horizontal Subdivision of the	
Organization	481
Step 2: Establishing Vertical Levels	
and Delegating Authority	491
Step 3: Obtaining Lateral	
Coordination and Integration	492
Step 4: Fitting in the Individual	496
Size and Structure	496
Conclusions and Implications	497
Questions for Study and Discussion	498

Chapter 18:	
Authority and Power in Organizations	503
Authority, Power, and Influence	504
Traditional Approaches to Authority	508
Examples of Contingency Considerations Relating to Authority	516
Conclusions and Implications	521
Questions for Study and Discussion	522
Chapter 19:	
Modern Approaches to Organization Structure	527
Limitations of Bureaucracy	528
Situational Views of Organization Design	530
A Comprehensive Situational Model of Organization Design	537
Participative Approaches to Organization Design	540
Conclusions and Implications	545
Questions for Study and Discussion	546

PART SEVEN: LEADERSHIP

551

Chapter 20:	
Leadership Styles	553
The Nature of Leadership	554
The Search for Leadership Traits	556
Approaches Examining Leadership Behavior	556
Advantages and Limitations of Different Leadership Styles	558
Using Participative Styles	561
Situational Approaches to Leadership	563
Situational Variables in Leadership	567
Applying Situational Leadership	571
Conclusions and Implications	573
Questions for Study and Discussion	574
Chapter 21:	
Managing Conflict and Change	579
The Nature of Conflict	580
Types and Sources of Conflict	581

Advantages and Limitations of Conflict	583
The Management of Conflict	586
Situational Variables that Relate to Conflict	590
Change in Organizations	591
Managing Change Variables	595
Organization Development	600
Conclusions and Implications	601
Questions for Study and Discussion	602

PART EIGHT: CONCLUSIONS	607
--------------------------------	------------

Chapter 22:	
Career Considerations for Managers	609
Profiles of Business Executives	610
Career Choices	614
Finding a Job	615
The First Job	619
The Realities of Politics in Organizations	622
Establishing Career Goals and Plans	624
Career Stages	630
Primary Factors Leading to Success	635
Questions for Study and Discussion	639
Chapter 23:	
Management and the Future	645
Stages in Industrial Societies	646
Trends between Now and the Year 2000	647
Changes in the Management Process	658
Management Makes the Difference	662
Questions for Study and Discussion	663
Glossary	668
Index	683

PART I

INTRODUCTION
