Preface	17
---------------	----

Chapter 1 Microbial and cell adhesion

BRIAN A. PETHICA, Clarkson College, Potsdam, New York 13676, U.S.A.

1.1	Introduction.	19
1.2	Cell contacts: the phenomena	20
1.3	Biological contact: the physical chemistry	26
1.4	A thermodynamic description of cell adhesion	28
1.5	'Wetting' as a description of bioadhesion	35
1.6	Conclusions	38
	Acknowledgements	38
	References	38

Chapter 2 The microbial cell surface and adhesion

J. B. WARD, Division of Microbiology, National Institute of Medical Research,
London, UK and R. C. W. BERKELEY, Department of Bacteriology, University
of Bristol, UK

2.1	Introduction.	47
2.2	Bacterial wall structure.	47
2.2.1	Peptidoglycan.	47
2.2.2	Secondary wall polymers in gram-positive bacteria.	50
2.2.3	The outer membrane of gram-negative bacteria	52
2.3	Wall associated structures	55
2.3.1	Capsules and slime layers	55
2.3.2	Flagella and pili.	59
2.4	Involvement of envelope components in adhesion	60
2.5	Concluding remarks	62
	References	63

Chapter 3 The characteristics of interfaces and their role in microbial attachment

M. FLETCHER, Department of Environmental Sciences, University of Warwick, Coventry; M. J. LATHAM, PALL Europe Management Services Ltd., Walton Road, Cosham, Nr. Portsmouth; J. M. LYNCH, Agricultural Research Council, Letcombe Laboratory, Wantage, Oxon. and P. R. RUTTER, Physical Sciences Branch, New Technology Division, BP Research Centre, Chertsey Road, Sunbury-on-Thames, Middlesex

3.1	Introduction.	67
3.2	Solid/air, liquid/liquid and liquid/air interfaces	67
3.3	Solid/liquid interfaces	68
3.4	Adsorption of interfaces	71
3.5	Surfaces of soil particles	73
3.6	Surfaces of animal cells.	74
3.7	Surfaces of plants	75
3.8	Conclusion.	76
	References	76

Chapter 4 The adhesion of micro-organisms to surfaces: physico-chemical aspects

Paul R. RUTTER, BP Research Centre, Chertsey Road, Sunbury-on-Thames, Middlesex and BRIAN VINCENT, Department of Physical Chemistry, University of Bristol

4.1	Introduction.	79
4.2	Long-range interactions between charged particles and macroscopic bodies.	80
4.3	Particle adsorption isotherms.	83
4.4	Adsorption kinetics	84
4.5	Short-range forces	86
4.6	Non-spherical and non-rigid particles.	86
4.7	Effects arising from the presence of macromolecules	87
	References	91

Chapter 5 Particle-surface adhesion

Th. F. TADROS, I.C.I. Research Station, Jealots Hill, Bracknell, Berkshire, RG12 8EY

5.1	Introduction.	93
5.2	Interaction forces involved in particle deposition and adhesion.	95
5.2.1	Particle deposition.	95
5.2.2	Particle adhesion.	96
5.3	Theory of particle deposition.	98
5.4	Theory of particle adhesion.	101
5.5	Surface energy approach to adhesion.	104
5.6	Deposition and adhesion measurements	108
5.6.1	Particle deposition.	108
5.6.2	Particle adhesion.	110
	References.	113

Chapter 6 Sucrose and deposition of *Streptococcus mutans* at solid liquid interfaces

A. ABBOTT and R. C. W. BERKELEY, Department of Bacteriology, University of Bristol, UK and P. R. RUTTER, Department of Colloid and Surface Science, Unilever Research, Isleworth Laboratory, UK. *Present Address:* Physical Sciences Branch, New Technology Division, BP Research Centre, Chertsey Road, Sunbury-on-Thames, Middlesex, TW16 7LN

6.1	Introduction	117
6.2	Techniques of study	118
6.2.1	The study of bacterial deposition using a rotating disc technique	119
6.3	The deposition of <i>S. mutans</i> grown in glucose and sucrose broths	122
6.3.1	Influence of surface potential on deposition	122
6.3.2	The influence of surface morphology	126
6.4	Conclusions	137
	References	137

Chapter 7 The measurement of microbial adhesion

H. W. FOWLER and A. J. McKAY, Department of Chemical Engineering, University College of Swansea

7.1	Introduction	143
7.2	Methods of measurement of adhesion	144
7.2.1	Cell distraction methods	144
7.2.2	Dynamic adhesion assessment	147
7.3	The radial flow growth chamber	148
7.4	Results	156
7.5	Discussion	158
7.6	Conclusion	158
	Acknowledgements	159
	Nomenclature	159
	References	159

Chapter 8 The interaction of micro-organisms with ion exchange resins

JOHN M. WOOD, Microbiology Section, Leatherhead Food Research Association, Leatherhead, Surrey, KT22 7RY

8.1	Introduction	163
8.2	The interaction of bacteria with anion exchange resin	164
8.2.1	The effect of pH on the adsorption of bacteria	164
8.2.2	The effect of salt concentration on adsorption	170
8.2.3	The effect of salt concentration on adhesion	170
8.2.4	The cell surface structures involved in adsorption	172
8.3	The interaction of bacteria with cation exchange resins	174
8.3.1	The adsorption of <i>Staph. aureus</i> to strongly acidic cation exchange resin	174
8.3.2	The adsorption of bacteria to weakly acidic cation exchange resins	176
8.3.3	The effect of environmental conditions	176
8.3.4	The separation of microbial species by cation exchange chromatography	178
8.3.5	The cell surface structures involved in the adsorption of micro-organisms to cation exchange resin	181
8.4	The mechanisms of cell-resin interactions	182
	References	184

Chapter 9 Bacterial adhesion in natural environments

K. C. MARSHALL, School of Microbiology, The University of New South Wales, PO Box 1, Kensington, New South Wales, Australia 2033

9.1	Introduction	187
9.2	Nutritional requirements of bacteria	189
9.3	Conditions existing in the aqueous phase	189
9.4	Conditions existing at the solid surface	189
9.5	Response of bacteria to surfaces	190
9.6	The adhesion process	192
9.7	Conclusions	193
	References	193

Chapter 10 The question of passive versus active attachment mechanisms in non-specific bacterial adhesion

MADILYN FLETCHER, Department of Environmental Sciences, University of Warwick, Coventry CV4 7AL

10.1	Introduction	197
10.1.1	Effects of different bacterial strains and environmental conditions on attachment properties	197
10.1.2	Theoretical treatment of attachment data	198
10.2	Attachment due to passive adsorption	199
10.2.1	The elution of bacteria off attachment surfaces	199
10.2.2	The effect of dissolved substances on bacterial attachment	199
10.3	Attachment as a physiological process	200
10.4	The influence of metabolic inhibition on bacterial enrichment	201
10.5	Conclusions	207
	Acknowledgements	207
	References	207

Chapter 11 Phases in the interaction between bacteria and animal cells

G. W. JONES, LEIGH A. RICHARDSON and J. L. VANDEN-BOSCH, Department of Microbiology and Immunology, University of Michigan, Ann Arbor, Michigan, USA. 48109

11.1	Introduction	211
11.2	The K88 adhesive system	211
11.3	The adhesive properties in <i>Vibrio cholerae</i>	212
11.4	The interaction of <i>S. typhimurium</i> and HeLa cells	213
11.4.1	The model system	213
11.4.2	Phase one — accumulation and adsorption	214
11.4.3	Phase two — adhesion	214
11.4.4	Adhesive systems of <i>S. typhimurium</i>	215
11.4.5	Phase three — invasion	216
11.5	Conclusions	217
	Acknowledgement	218
	References	218

Chapter 12 A continuous culture study of the attachment of bacteria to surfaces

J. N. WARDELL and C. M. BROWN, Department of Brewing and Biological Sciences, Heriot-Watt University; D. C. ELLWOOD, PHLS Porton Down, Salisbury, Wiltshire, SP4 0JG

12.1	Introduction	221
12.2	The use of continuous cultures to study bacterial attachment	222
12.3	Nature of growth on surfaces	226
12.4	Discussion	226
	Acknowledgement	229
	References	229

Chapter 13 Surface interactions between clay minerals and microbes, viruses and soluble organics, and the probable importance of these interactions to the ecology of microbes in soil

G. STOTZKY, Department of Biology, New York University, 952 Brocon Building, New York, NY 10003, USA

13.1	Indirect effects of clay minerals on microbial ecology	231
13.2	Mechanisms involved in surface interactions between clay minerals and biological systems	234
13.3	Equilibrium adsorption vs. binding: general concepts	235
13.4	Electrokinetic potentials (EKP) of clay minerals and bacteria	236
13.5	Adsorption and binding of proteins by clay minerals	238
13.6	Microbial utilization of clay-protein complexes	240
13.7	Adsorption and binding of amino acids and small peptides by clay minerals	241
13.8	Microbial utilization of clay-amino acid or peptide complexes	241
13.9	Ecological implications of the binding of organics to clays	242
13.10	Adsorption of viruses	243
13.11	Conclusions	244
	References	245

Chapter 14 Microbial adhesion to soil surfaces: consequences for growth and enzyme activities

R. G. BURNS, Biological Laboratory, University of Kent, Canterbury, Kent CT2 7NJ

14.1	Introduction	249
14.2	The soil micro-environment	249
14.2.1	Nature of individual components	249
14.2.2	Properties of soil components <i>in situ</i>	251
14.3	Consequences of microbial association with soil surfaces	253
14.3.1	Microbial growth	253
14.3.2	Extracellular enzyme activities	255
14.4	Discussion	257
	References	259

Chapter 15 The role of natural and synthetic polymers in stabilizing soil aggregates

M. H. B. HAYES, Department of Chemistry, University of Birmingham, P.O. Box 363, Birmingham, B15 2TT

15.1	Introduction	263
15.2	Polymer structures	264

15.2.1	Humic substances	264
15.2.2	Soil polysaccharides	268
15.2.3	Other polymers	269
15.3	Soil conditioning with natural and synthetic polymers	270
15.3.1	Aggregate formation and stabilization	272
15.3.2	Conditioning from naturally occurring soil polymers	273
15.3.3	Conditioning from synthetic and altered natural polymers	276
15.4	Polymer soil inorganic colloid interactions	280
15.4.1	The nature of clay-polymer complexes	280
15.5	Summary and general conclusions	289
	References	289
 Chapter 16 Flocculation of <i>Rhizobium</i> from soil colloids for enumeration by immunofluorescence		
D. F. BEZDICEK and M. D. DONALDSON, Department of Agronomy and Soils, Washington State University, Pullman, Washington, 99164, USA		
16.1	Introduction	297
16.2	Preparation of <i>Rhizobia</i>	298
16.3	Flocculation studies	298
16.4	Sucrose density centrifugation	301
16.5	Survival of <i>Rhizobium</i> in soil	303
	References	308
 Chapter 17 Microbial adhesion to plant surfaces		
FRANK B. DAZZO, Department of Microbiology and Public Health, Michigan State University, East Lansing, Michigan, 48824, USA		
17.1	Introduction	311
17.2	Adhesion of <i>Agrobacterium</i> to its host	311
17.3	Interaction of systemic bacterial plant pathogens and host cell walls	312
17.4	Adhesion of <i>Rhizobium</i> to legume root hairs	313
17.5	Regulation of adhesion in the <i>Rhizobium</i> -legume symbiosis	320
17.6	Summary	324
	Acknowledgements	324
	References	324
 Chapter 18 Polysaccharides in the adhesion of marine and freshwater bacteria		
I. W. SUTHERLAND, Department of Microbiology, University of Edinburgh, West Mains Road, Edinburgh		
18.1	Polysaccharides in the adhesion of marine and freshwater bacteria	329
18.2	Results	331
18.2.1	Chemical composition	331
18.2.2	Ions and their effect on the polysaccharides	332
18.2.3	Physical properties of the polysaccharide	333
18.3	Discussion	335
	References	336

Chapter 19 Adhesion of rumen bacteria to plant cell walls

M. J. LATHAM, PALL Europe Management Services Ltd., Walton Road, Cosham,
Nr. Portsmouth

19.1	Introduction	339
19.2	Environmental conditions in the rumen	339
19.3	Properties of plant cell walls	340
19.4	The surface microflora	341
19.4.1	Cellulolytic bacteria	342
19.4.2	Non-cellulolytic bacteria	343
19.5	Variations in the plant cell wall surface affecting adhesion.	344
19.6	The role of the bacterial surface in attachment	346
19.7	Concluding remarks	346
	References	347

Chapter 20 Adhesion of bacteria to the surfaces of the mouth

R. J. GIBBONS, Forsyth Dental Center, 140 Fenway, Boston, Mass. 02115,
USA

20.1	Introduction	351
20.2	Features of the oral cavity as an environment for bacteria	351
20.3	Distribution of the oral flora	352
20.4	The acquired pellicle coating the teeth.	357
20.5	Model for studying bacterial attachment	358
20.6	Selective bacterial adherence and its role in colonization	360
20.7	Influence of desquamation	361
20.8	Influence of cell numbers	361
20.9	Selective adherence and host tropisms	362
20.10	Selective adherence and the susceptibility of oral tissues to infection.	362
20.11	Mechanisms of bacterial attachment to oral surfaces.	362
20.12	Nature of receptors involved in the attachment of bacteria to oral surfaces.	365
20.13	Features of the attachment of selected bacteria to oral surfaces	367
20.14	Bacterial attachment to dissimilar organisms.	371
20.15	Role of host derived polymers in bacterial accumulation.	374
20.16	Clearance of bacteria from the mouth	374
20.17	Speculations on the basis of adherence specificity	375
	References	377

Chapter 21 Interaction of surface polymers of *Streptococcus pyogenes* with animal cells

EDWIN. H. BEACHEY and W. ANDREW SIMPSON, VA Medical Center and
Departments of Medicine and Microbiology, University of Tennessee, Memphis,
TN 38104, USA and ITZHAK OFEK, Department of Human Microbiology, Tel
Aviv University, Tel Aviv, Israel

21.1	Introduction	389
21.2	Adhesion of <i>S. pyogenes</i> to epithelial cells	389
21.3	Cell membrane and protein binding properties of LTA	392
21.3.1	Binding of LTA to host cells and cell membranes.	394
21.3.2	Binding of LTA to albumin, a possible membrane receptor analogue	395
21.3.3	Complexing of LTA with streptococcal surface proteins	397

21.4	Discussion	401
	Acknowledgements	402
	References	402

Chapter 22 Salivary factors in initial plaque formation

DAG ØRSTAVIK, NIOM — Scandinavian Institute of Dental Materials, Oslo, Norway

22.1	Introduction.	407
22.2	Dental plaque formation.	407
22.3	Pellicle formation	409
22.4	Bacterial adhesion to enamel or pellicle	410
22.4.1	General considerations	410
22.4.2	<i>In vitro</i> bacterial adherence to pellicle	411
22.4.3	Effect of saliva as suspension medium	413
22.4.4	Interactions between salivary proteins and oral bacteria in suspension	414
22.5	Clinical studies and <i>in vitro</i> experiments	416
22.5.1	General considerations	416
22.5.2	Pellicle/bacteria interactions <i>in vivo</i>	416
22.5.3	Salivary factors related to plaque formation <i>in vivo</i>	418
22.6	Summarizing comments	418
	References	418

Chapter 23 On the chemistry of the matrix of dental plaque

GUNNAR ROLLA, Dental Faculty, University of Oslo, Geitmyrsvn. 71, Oslo 4, Norway

23.1	Introduction.	425
23.2	Demonstration of anionic material in the plaque matrix	427
23.3	Evidence for the significance of calcium ions in the integrity of sucrose induced dental plaque	427
23.4	High amounts of lipoteichoic acid in sucrose induced plaque <i>in vivo</i>	428
23.5	<i>In vivo</i> effect of some cations, including stannous fluoride, on the amount of lipoteichoic acid formed in plaque.	431
23.5.1	Clinical procedures	431
23.5.2	Results and clinical variations	432
23.6	Discussion	435
23.7	Summary and conclusions.	436
	Acknowledgement.	436
	References	436

Chapter 24 The antibody-mediated elimination of adhesion determinant from enteropathogenic strains of *Escherichia coli*

MARGARET A. LINGGOOD and P. PORTER, Unilever Research Laboratory, Colworth House, Sharnbrook, Bedford

24.1	Introduction.	441
24.2	Adhesion receptors and antibody blocking	443
24.3	Plasmid loss <i>in vivo</i> and <i>in vitro</i>	445
24.4	Antibody specificity associated with plasmid loss	448
24.5	Discussion	449
	References	452

Chapter 25 The adhesive properties of *Neisseria gonorrhoeae*

P. J. WATT, Department of Microbiology, Southampton University Medical School, Southampton General Hospital, Southampton, Hampshire, England

25.1	Introduction	455
25.1.1	Factors influencing the surface properties of neisseria	456
25.2	The adhesive properties of gonococcal pili	457
25.2.1	The effect of hydrogen ion concentration on pilus mediated adhesion	459
25.2.2	Electrostatic interactions	460
25.2.3	Ionic bridging	460
25.2.4	Evidence of a specific receptor for gonococcal pili	461
25.3	Outer envelope components as adhesins	463
25.3.1	Non-specific attractive forces	463
25.3.2	The nature of specific adhesins	465
25.4	Summary and conclusions	466
	Acknowledgement	466
	References	467

Chapter 26 Adhesion of organisms to animal tissues

P. D. WALKER and L. K. NAGY, Department of Bacteriology, R. & D. Wellcome Research Laboratories, Langley Court, Beckenham, Kent, England

26.1	Introduction	473
26.2	Scanning electron microscope appearance of bacterial adhesion	473
26.2.1	Intestinal tract	473
26.2.2	Respiratory tract	474
26.3	Specific adhesive mechanisms	474
26.3.1	Proteinaceous antigens	484
26.3.2	Polysaccharide antigens	488
26.4	General discussion	489
	Acknowledgements	493
	References	493

Chapter 27 The attachment of bacteria to the squamous epithelial cells and its importance in the microecology of the intestine

R. FULLER and B. E. BROOKER, National Institute for Research in Dairying, Shinfield, Reading RG2 9AT

27.1	Introduction	495
27.2	Demonstration of bacterial attachment	495
27.3	Specificity of attachment	496
27.4	Mechanism of attachment	499
27.5	Importance of attachment in intestinal microecology	502
27.6	Concluding remarks	504
	References	505

Chapter 28 Summaries of poster contributions

28.1	Characterization of the <i>Klebsiella pneumoniae</i> ligand which mediates adherence to human epithelial cells and serves as the site of attachment	
------	---	--

	for coliphages T3 and T7. Relationship to pathogenicity of encapsulated strains	509
	C. PRUZZO, S. VALISENA, E. DEBBIA and G. SATTA, Institute of Microbiology, University of Genova, Italy	
28.2	The importance of microbial adhesion in anaerobic metal corrosion	511
	C. C. GAYLARDE and J. M. JOHNSTON, Department of Biological Sciences, City of London Polytechnic, Old Castle Street, London E1	
28.3	An improved technique for the study of bacterial adhesion to surfaces	513
	D. E. BROOKS, Departments of Pathology and Chemistry, University of British Columbia, Vancouver, Canada, V6T 1W5 and T. J. TRUST, Department of Biochemistry and Microbiology, University of Victoria, Victoria, Canada, V8V 2Y2	
28.4	Adhesion measurement.	515
	L. R. FISHER, CSIRO Division of Food Research, P.O. Box 52, North Ryde 2113, Australia; J. N. ISRAELACHVILI, Department of Applied Mathematics, Research School of Physical Sciences, Australian National University, P.O. Box 4, Canberra, A.C.T. 2600, Australia; N. S. PARKER, CSIRO Division of Food Research, P.O. Box 52 North Ryde 2113, Australia; F. SHARPLES, CSIRO Division of Applied Physics, Lindfield, N.S.W., Australia	
28.5	Analysis of selected variables for predicting bacterial adhesion to power plant condenser tubes	517
	D. A. HENDRICKSON and T. S. McCOMISH, Ball State University, Muncie, Indiana, U.S.A.	
28.6	Studies on a veillonella-binding protein of <i>Streptococcus salivarius</i> (serotype 1).	521
	ANTON H. WEERKAMP and BARRY C. McBRIDE, Department of Microbiology, University of Nijmegen, Toernooiveld, 6525 ED Nijmegen, the Netherlands, and University of British Columbia, Vancouver, B.C., V6T 1W5, Canada	
28.7	Attachment and prevention of attachment of bacteria to meat surfaces	524
	S. NOTERMANS, Laboratory of Zoonoses and Foodmicrobiology, National Institute of Public Health, P.O. Box 1, 3720 BA Bilthoven, the Netherlands; and T. LEEMANS, Laboratory of Foodmicrobiology and Hygiene, Agricultural University Wageningen, the Netherlands	
28.8	Attachment of diatoms to surfaces: field and laboratory experiments	526
	B. COOKSEY, K. E. COOKSEY, C. A. MILLER and J. H. PAUL, University of Miami, Florida, USA 33149	
28.9	The isolation and purification of a mannose-binding agglutinin from <i>E.coli</i> strains and <i>Corynebacterium parvum</i> NCTC 10390.	528
	J. BAGG, I. R. POXTON, J. DOYLE, P. W. ROSS and D. M. WEIR, Departments of Bacteriology and Biochemistry, University of Edinburgh Medical School, Teviot Place, Edinburgh EH8 9AG	
28.10	Studies of colonisation factors in <i>Escherichia coli</i> strains isolated from humans: identification and plasmid analysis	530
	A. CRAVIOTO, MOYRA M. McCONNELL, B. ROWE, SYLVIA M. SCOTLAND, H. R. SMITH and GERALDINE A. WILLSHAW, Divi-	

	sion of Enteric Pathogens, Central Public Health Laboratory, Colindale Avenue, London, NW9 5HT	
28.11	Adherence of <i>Escherichia coli</i> to human epithelial cells <i>in vitro</i> ; do outer membrane proteins play a role?	532
	B. M. BYRNE and J. DANKERT, Laboratory of Medical Microbiology, Division for Hospital Infections, Oostersingel 59, Groningen, the Netherlands	
28.12	Isolation and identification of the surface receptor of <i>Streptococcus sanguis</i> responsible for adherence to hydroxyapatite	536
	B. ROSAN, B. APPELBAUM, University of Pennsylvania School of Dental Medicine, Philadelphia, PA, USA; S. C. HOLT, Department of Microbiology, University of Massachusetts, Amherst, Mass, USA	
28.13	Adhesion of enteropathogenic bacteria to hydrophobic surfaces.	537
	T. WADSTROM, A. FARIS, S. HJERTEN, Department of Bacteriology and Epizootology, Swedish University of Agricultural Sciences, College of Veterinary Medicine and M. LINDAHL, Department of Bacteriology and Epizootology, Swedish University of Agricultural Sciences, College of Veterinary Medicine and Institute of Biochemistry, Biomedicum, S-751 23 Uppsala, Sweden	
28.14	Cell surface hydrophobicity and charge related to the initial microbial adhesion at the air-water interface.	540
	BJORN DAHLBACK, MALTE HERMANSSON, STAFFAN KJELLEBERG, BIRGITTA NORKRANS and KARSTEN PEDERSEN, Department of Marine Microbiology, Botanical Institute, University of Goteberg, Carl Skottsbergs Gata 22, S-143 19 Goteberg, Sweden	
28.15	Bacterial adherence to hydrocarbons.	541
	M. ROSENBERG, E. ROSENBERG and D. GUTNICK, Department of Microbiology, George S. Wise Faculty of Life Sciences, Tel Aviv University, Ramat Aviv, Israel	
28.16	A reactor for tryptophan production by whole immobilised cells	543
	P. HENNO, A. MARCIPAR and E. SEGARD, Institut de Technologie des Surfaces Actives, Universite de Compeigne, BP. 233 - 60206 COMIEGNE - France; G. GEIENAERT, Argiles et Mineraux AGS VLERAC 17270 MONTGYDN, France	
28.17	The observation of bacterial deposition from a flowing suspension	544
	R. LEECH and R. J. W. HEFFORD, Unilever Research Laboratory, Port Sunlight, Wirral	
Chapter 29 Conclusion.		547
