THIRD EDITION

**POWER-SWITCHING  
CONVERTERS**

---

## Preface to the third edition

In this third edition, many new materials and a new chapter have been added. Several chapters have been completely revised and updated; the chapter on modeling and control of switching converters is now presented in four chapters and a new chapter on the applications of switching converters has been added.

Similar to its two previous editions, this book can be used as a textbook for a senior-level electrical/electronic engineering course on switching converters. The introductory course would cover the basic switching converter topologies described in Chapters 1 to 4, followed by an introduction to basic modulation techniques presented in Chapter 5. The instructor may choose to skip to Chapters 10 and 11 on interleaved converters and switching capacitor converters to complete the overview of switching converter topologies. Chapters 6 to 9 cover the modeling, closed-loop control and stability considerations in the design of switching converters. In particular, Chapters 6 and 7 cover continuous-time models and control techniques for switching converters, while Chapters 8 and 9 introduce discrete-time models and digital control for switching converters. Some of the materials can be skipped and covered later in a more advanced-level course.

Chapter 12 provides tools for the simulation of switching converters. It introduces both PSpice and MATLAB® simulations of switching converters. This chapter may be partially covered after Chapter 2 and concurrently during Chapters 4, 5, and 6, assigning some of the simulation exercises to increase understanding of the topology and operation of switching converters.

Chapter 13 introduces the basic concepts necessary to understand various actual and emerging applications for switching converters, such as in power factor correction, LED drivers, low-noise converters, and switching converter topologies for solar and fuel cells.

The discussion of switching converters is not complete until a switching converter is analyzed, designed, and finally prototyped. Chapter 14 contains several complete design examples, including experimental designs that may be used as technical references or for class laboratory projects.

Supplementary information and material will be updated periodically and are available at <http://www.crcpress.com>. These material include class slides, selected PSpice examples and MATLAB® scripts. The PSpice examples are designed to run on the OrCAD 9.2 student version and PSIM software.

Many individuals have contributed to this third edition of *Power-Switching Converters*. Several design case studies in Chapter 14 were adapted from the class projects of our former graduate students at the University of Arkansas,

in particular, Kien Truong and Lan Phuong Bui Pham. We gratefully acknowledge our students at the Universidad Nacional del Sur: Leandro Stefanazzi, Germán Oggier, Hernán López, Juan Ugarte, Luciano García Rodríguez, Gastón Lanchas, Ángel Soto, Martín Ceci and Alfredo Falcón for preparing the figures, typing equations and proofreading the text. Finally, we would like to express our sincere gratitude to our families for their support and love.

<b>List of Figures</b>	<b>xiii</b>
<b>List of Tables</b>	<b>xxxii</b>
<b>Preface</b>	<b>xxxiii</b>
<b>1 Introduction to Switching Converters</b>	<b>1</b>
1.1 Introduction . . . . .	1
1.1.1 Industry trends . . . . .	1
1.2 Linear converter . . . . .	3
1.2.1 Linear series-pass regulator . . . . .	3
1.2.2 Linear shunt regulator . . . . .	5
1.3 Switching converters . . . . .	6
1.3.1 Basic switching converter with resistive load . . . . .	7
1.3.2 Basic switching converter with RL load . . . . .	9
1.4 Principles of steady-state converter analysis . . . . .	12
1.4.1 Inductor volt-second balance . . . . .	12
1.4.2 Capacitor charge balance . . . . .	13
1.5 Problems . . . . .	14
<b>2 Basic Switching Converter Topologies</b>	<b>15</b>
2.1 Introduction . . . . .	15
2.2 Buck converter . . . . .	16
2.2.1 Continuous mode . . . . .	16
2.2.2 Discontinuous mode . . . . .	21
2.3 Synchronous rectifier . . . . .	28
2.4 Ripple steering . . . . .	29
2.5 Boost converter . . . . .	31
2.5.1 Continuous mode . . . . .	32
2.5.2 Discontinuous mode . . . . .	39
2.6 Buck-boost converter . . . . .	44
2.6.1 Continuous mode . . . . .	46
2.6.2 Discontinuous mode . . . . .	49
2.7 Cuk converter . . . . .	53
2.8 SEPIC converter . . . . .	60
2.8.1 Continuous conduction mode . . . . .	61
2.8.2 Design considerations . . . . .	63

2.9	Zeta converter . . . . .	64
2.10	Converter realization with nonideal components . . . . .	66
2.10.1	Inductor model . . . . .	67
2.10.2	Capacitor model . . . . .	67
2.10.3	Semiconductor losses . . . . .	69
2.10.4	Effect of semiconductor losses on the output voltage . . . . .	70
2.11	Problems . . . . .	72
<b>3</b>	<b>Resonant Converters</b>	<b>75</b>
3.1	Introduction . . . . .	75
3.2	Parallel resonant circuit — A review . . . . .	76
3.3	Series resonant circuit — A review . . . . .	77
3.4	Classification of quasi-resonant switches . . . . .	80
3.5	Zero-current-switching quasi-resonant buck converter . . . . .	83
3.6	Zero-current-switching quasi-resonant boost converter . . . . .	93
3.7	Zero-voltage-switching quasi-resonant buck converter . . . . .	100
3.8	Zero-voltage-switching quasi-resonant boost converter . . . . .	106
3.9	Series-loaded resonant converter . . . . .	113
3.9.1	Discontinuous mode ( $0 < f_s < 0.5f_n$ ) . . . . .	114
3.9.2	Continuous mode ( $f_s > f_n$ or above-resonant mode) . . . . .	117
3.9.3	Continuous mode ( $0.5f_n < f_s < f_n$ or below-resonant mode) . . . . .	118
3.10	Parallel-loaded resonant converter . . . . .	122
3.10.1	Discontinuous mode ( $0 < f < 0.5f_n$ ) . . . . .	123
3.10.2	Continuous mode ( $f_s > f_2$ or above-resonant mode) . . . . .	127
3.10.3	Continuous mode ( $0.5f_n < f_s < f_n$ or below-resonant mode) . . . . .	129
3.11	Problems . . . . .	132
<b>4</b>	<b>Isolated Switching Converters</b>	<b>135</b>
4.1	Introduction . . . . .	135
4.2	Forward converter . . . . .	136
4.3	Two-switch forward converter . . . . .	141
4.4	Push-pull converter . . . . .	144
4.5	Half-bridge switching converter . . . . .	148
4.6	Full-bridge switching converter . . . . .	151
4.7	Flyback converter . . . . .	153
4.8	Two-switch flyback converter . . . . .	158
4.9	Dual active bridge converter . . . . .	159
4.9.1	Power flow control . . . . .	172
4.10	Zero-current-switching quasi-resonant half-bridge converter . . . . .	175
4.11	Problems . . . . .	181

<b>5 Control Schemes of Switching Converters</b>	<b>183</b>
5.1 Introduction . . . . .	183
5.2 Pulse-width modulation . . . . .	183
5.2.1 Voltage-mode PWM scheme . . . . .	184
5.2.2 Current-mode PWM scheme . . . . .	191
5.2.2.1 Instability for $D > 50\%$ . . . . .	191
5.2.2.2 Compensation with external ramp . . . . .	193
5.3 Hysteresis control: switching current source . . . . .	194
5.3.1 Steady-state analysis during $t_{on}$ . . . . .	196
5.4 Commercial integrated circuit controllers . . . . .	199
5.4.1 Fixed-frequency voltage-mode SG3524 controller . . . . .	199
5.4.2 Variable-frequency voltage-mode TL497 controller . . . . .	202
5.4.3 Fixed-frequency current-mode UC3842 PWM controller . . . . .	203
5.4.4 TinySwitch-II family of low power off-line switchers . . . . .	208
5.5 Control schemes for resonant converters . . . . .	211
5.5.1 Off-line controllers for resonant converters . . . . .	213
5.5.2 L6598 operation . . . . .	213
5.6 Problems . . . . .	227
<b>6 Continuous-Time Modeling of Switching Converters</b>	<b>229</b>
6.1 Introduction . . . . .	229
6.2 Switching converter analysis using classical control techniques . . . . .	230
6.2.1 Basic linear model of the open-loop switching converter . . . . .	230
6.2.2 PWM modulator model . . . . .	231
6.2.3 Averaged switching converter models . . . . .	237
6.2.4 Output filter model . . . . .	241
6.3 Summary of small-signal models of switching converters . . . . .	253
6.4 Linear model of the voltage regulator including external perturbances . . . . .	258
6.4.1 Output impedance and stability . . . . .	259
6.5 State-space representation of switching converters . . . . .	260
6.5.1 Review of linear system analysis . . . . .	260
6.5.2 State-space averaging . . . . .	264
6.6 Switching converter transfer functions . . . . .	285
6.6.1 Source-to-state transfer functions . . . . .	285
6.7 Input EMI filters . . . . .	289
6.7.1 Stability considerations . . . . .	290
6.8 Problems . . . . .	299
<b>7 Analog Control of Switching Converters</b>	<b>301</b>
7.1 Introduction . . . . .	301
7.2 Review of negative feedback using classical-control techniques . . . . .	301
7.2.1 Closed-loop gain . . . . .	301
7.2.2 Stability analysis . . . . .	302

7.2.3	Relative stability . . . . .	302
7.3	Linear model of the closed-loop switching converter . . . . .	304
7.3.1	Feedback network . . . . .	304
7.3.2	Error amplifier compensation networks . . . . .	304
7.3.3	PI compensation network . . . . .	306
7.3.4	PID compensation network . . . . .	309
7.3.5	Proportional control . . . . .	314
7.4	Feedback compensation in a buck converter with output capacitor ESR . . . . .	314
7.5	Feedback compensation in a buck converter with no output capacitor ESR . . . . .	318
7.6	Complete state feedback . . . . .	320
7.6.1	Design of a control system with complete state feedback . . . . .	320
7.6.2	Pole selection . . . . .	322
7.6.3	Feedback gains . . . . .	322
7.7	Problems . . . . .	327
<b>8</b>	<b>Discrete-Time Modeling of Switching Converters</b>	<b>329</b>
8.1	Introduction . . . . .	329
8.2	Continuous-time systems . . . . .	329
8.3	Direct discrete model . . . . .	330
8.4	Linear direct discrete model . . . . .	331
8.5	Continuous-time averaged state-space model . . . . .	332
8.6	Averaged discrete-time model of the switching converter . . . . .	335
8.7	Problems . . . . .	338
<b>9</b>	<b>Digital Control of Switching Converters</b>	<b>339</b>
9.1	Introduction . . . . .	339
9.2	Proportional controller . . . . .	340
9.3	Digital redesign of a PID controller . . . . .	340
9.4	Design of a discrete control system with complete state feedback . . . . .	342
9.4.1	Pole selection . . . . .	343
9.4.2	Feedback gains . . . . .	344
9.4.3	Voltage mode control . . . . .	344
9.4.4	Current mode control . . . . .	347
9.5	Problems . . . . .	351
<b>10</b>	<b>Interleaved Converters</b>	<b>353</b>
10.1	Introduction . . . . .	353
10.2	Interleaved buck converter . . . . .	353
10.2.1	State-space averaged model . . . . .	354
10.3	Interleaved boost converter . . . . .	356
10.3.1	State-space averaged model . . . . .	358
10.4	Interleaved converter operation based on current mode . . . . .	363

10.4.1 Ripple calculations . . . . .	363
10.4.2 Number of converters . . . . .	366
10.5 Power factor correction . . . . .	366
10.6 Problems . . . . .	369
<b>11 Switched Capacitor Converters</b>	<b>371</b>
11.1 Introduction . . . . .	371
11.2 Unidirectional power flow SCC . . . . .	371
11.2.1 Basic step-up converter . . . . .	371
11.2.2 Basic step-down converter . . . . .	372
11.2.3 Basic inverting converter . . . . .	375
11.3 Alternative switched capacitor converter topologies . . . . .	378
11.3.1 Step-down converter . . . . .	378
11.3.2 Step-up converter . . . . .	382
11.3.3 n-Stage step-down SCC . . . . .	384
11.3.4 n-Stage step-up SCC . . . . .	385
11.4 Bi-directional power flow SCC . . . . .	386
11.4.1 Step-up step-down converter . . . . .	387
11.4.2 Luo converter . . . . .	390
11.5 Resonant converters . . . . .	395
11.5.1 Zero-current switching . . . . .	396
11.6 Losses on switched-capacitor power converters . . . . .	398
11.7 Problems . . . . .	401
<b>12 Simulation of Switching Converters</b>	<b>403</b>
12.1 Introduction . . . . .	403
12.2 SPICE <sup>®</sup> circuit representation . . . . .	403
12.2.1 PSPICE simulations using .CIR . . . . .	405
12.2.2 PSPICE simulations using schematics entry . . . . .	417

2.7	Open-loop voltage conversions ratio versus duty cycle of the buck converter operating in continuous and discontinuous modes. . . . .	25
2.8	The $t_2/T$ versus duty cycle of the buck converter in the discontinuous mode of operation. . . . .	26
2.9	Buck converter waveforms for (a) $L > L_c$ and (b) $L < L_c$ . . . . .	27
2.10	Synchronous rectifier. . . . .	29
2.11	Two-port network for ripple steering. . . . .	30
2.12	Conventional buck converter with an additional LC branch. . . . .	31
2.13	Output voltage and inductors current waveforms of the circuit of Figure 2.12. . . . .	32
2.14	Buck converter with coupled inductors. . . . .	33
2.15	Voltage and inductor current waveforms of the buck converter with coupled inductors. . . . .	34

2.16	Circuit schematic of a boost converter. . . . .	35
2.17	Waveforms for the boost converter. . . . .	36
2.18	Mode 1 equivalent circuit for the boost converter ( $0 < t \leq t_{on}$ ). . . . .	37
2.19	Mode 2 equivalent circuit for the boost converter ( $t_{on} < t \leq T$ ). . . . .	37
2.20	A comparison of the peak-to-peak inductor ripple current versus the duty cycle for the buck and boost converters at a constant $K = V_s/f_s L$ . . . . .	38
2.21	Discontinuous mode 2 equivalent circuits for the boost converter. . . . .	40
2.22	Waveforms for (a) voltage across and (b) current flowing through the inductor for a boost converter in the discontinuous mode of operation. . . . .	41
2.23	Open-loop voltage conversion ratio versus duty cycle of the boost converter operating in the continuous and discontinuous modes. . . . .	42
2.24	Waveforms for the discontinuous-mode boost converter. . . . .	43
2.25	Circuit schematic of a buck-boost converter. . . . .	44
2.26	Buck-boost converter waveforms. . . . .	45
2.27	Mode 1 equivalent circuit of the buck-boost converter ( $0 < t \leq t_{on}$ ). . . . .	46
2.28	Mode 2 equivalent circuit for the buck-boost converter ( $t_{on} < t \leq T$ ). . . . .	47
2.29	Open-loop voltage conversion ratio versus duty cycle of the buck-boost converter operating in the continuous and discontinuous modes. . . . .	51
2.30	Comparisons of the voltage conversion ratios of buck, boost, and buck-boost switching converters. . . . .	52
2.31	Circuit schematic of a Cuk converter. . . . .	53
2.32	Cuk converter switching waveforms. . . . .	54
2.33	Mode 1 equivalent circuit for the Cuk converter. . . . .	55
2.34	Mode 2 equivalent circuit for the Cuk converter. . . . .	56
2.35	SEPIC converter. . . . .	61
2.36	Equivalent circuits of the SEPIC converter in the continuous conduction mode. . . . .	62
2.37	Simulated switching waveforms of the CCM SEPIC converter. . . . .	63
2.38	Zeta converter. . . . .	64
2.39	Equivalent circuits of the Zeta converter in the CCM. . . . .	65
2.40	Switching waveforms of the CCM Zeta converter. . . . .	66
2.41	Inductor model. . . . .	68
2.42	Capacitor model. . . . .	68
2.43	Typical power electronics circuit. . . . .	69
2.44	Switching waveforms. . . . .	71
2.45	Equivalent circuit of a buck converter including losses. . . . .	71

2.46	Circuit schematic for Problem 7. . . . .	74
3.1	A parallel-resonant circuit. . . . .	77
3.2	Phasor diagram showing the inductor and capacitor currents at the resonant frequency. . . . .	78
3.3	A series-resonant circuit. . . . .	79
3.4	Phasor diagram showing the capacitor and inductor voltages at the resonant frequency. . . . .	79
3.5	Current-mode quasi-resonant switches. . . . .	81
3.6	Load-line trajectories of a switching transistor: path A, forced switching; path B, resonant switching. . . . .	82
3.7	Voltage-mode quasi-resonant switches. . . . .	82
3.8	Control scheme for a quasi-resonant converter. . . . .	83
3.9	Zero-current-switching (ZCS) quasi-resonant buck converter with (a) a half-wave, L-type switch and (b) a full-wave, L-type switch. . . . .	84
3.10	Mode 1 equivalent circuit of the ZCS quasi-resonant buck converter. . . . .	85
3.11	Mode 2 equivalent circuit of the ZCS quasi-resonant buck converter. . . . .	86
3.12	Waveforms for the half-wave ZCS quasi-resonant buck converter. . . . .	87
3.13	Waveforms for the full-wave ZCS quasi-resonant buck converter. . . . .	88
3.14	Mode 3 equivalent circuit of the ZCS quasi-resonant buck converter. . . . .	88
3.15	Mode 4 equivalent circuit of the ZCS quasi-resonant buck converter. . . . .	89
3.16	Voltage conversion ratio for the half-wave ZCS quasi-resonant buck converter. . . . .	90
3.17	Resonant inductor current and resonant capacitor voltage for (a) heavy load and (b) light load. . . . .	91
3.18	Circuit schematic of a full-wave ZCS quasi-resonant boost converter. . . . .	94
3.19	Mode 1 equivalent circuit of the ZCS quasi-resonant boost converter. . . . .	95
3.20	Mode 2 equivalent circuit of the ZCS quasi-resonant boost converter. . . . .	95
3.21	Waveforms for the full-wave ZCS quasi-resonant boost converter. . . . .	96
3.22	Mode 3 equivalent circuit of the ZCS quasi-resonant boost converter. . . . .	97
3.23	Mode 4 equivalent circuit of the ZCS quasi-resonant boost converter. . . . .	97

3.24	Voltage conversion ratio versus $f_s/f_n$ for a full-wave ZCS quasi-resonant boost converter. . . . .	98
3.25	Circuit schematic of a full-wave ZVS quasi-resonant buck converter. . . . .	100
3.26	Mode 1 equivalent circuit of the full-wave ZVS quasi-resonant buck converter. . . . .	101
3.27	Mode 2 equivalent circuit of the full-wave ZVS quasi-resonant buck converter. . . . .	101
3.28	Waveforms of the full-wave ZVS quasi-resonant buck converter. . . . .	102
3.29	Mode 3 equivalent circuit of the full-wave ZVS quasi-resonant buck converter. . . . .	103
3.30	Mode 4 equivalent circuit of the full-wave ZVS quasi-resonant buck converter. . . . .	104
3.31	Voltage conversion ratio versus $f_s/f_n$ for the full-wave ZVS quasi-resonant buck converter. . . . .	105
3.32	Circuit schematic of a full-wave ZVS quasi-resonant boost converter. . . . .	107
3.33	Mode 1 equivalent circuit of the full-wave ZVS quasi-resonant boost converter. . . . .	107
3.34	Mode 2 equivalent circuit of the full-wave ZVS quasi-resonant boost converter. . . . .	108
3.35	Waveforms of the full-wave ZCS quasi-resonant boost converter. . . . .	109
3.36	Mode 3 equivalent circuit of the full-wave ZVS quasi-resonant boost converter. . . . .	110
3.37	Mode 4 equivalent circuit of the full-wave ZVS quasi-resonant boost converter. . . . .	110
3.38	Voltage conversion ratio versus $f_s/f_n$ for the full-wave ZVS quasi-resonant boost converter. . . . .	111
3.39	Circuit schematic of a half-bridge series-loaded resonant converter. . . . .	113
3.40	Equivalent circuit for the half-bridge series-loaded resonant converter. . . . .	114
3.41	Discontinuous-mode equivalent circuits for the half-bridge series-loaded resonant converter. . . . .	114
3.42	Switching waveforms for the discontinuous-mode half-bridge series-loaded resonant converter. . . . .	116
3.43	Continuous-mode ( $f_s > f_n$ ) equivalent circuits for the half-bridge series-loaded resonant converter. . . . .	117
3.44	Switching waveforms for the above-resonant continuous-mode half-bridge series-loaded resonant converter. . . . .	119
3.45	Switching waveforms for the below-resonant continuous-mode half-bridge series-loaded resonant converter. . . . .	119
