Acknowledgements

The authors and publishers wish to thank the following individuals and firms for permission to reproduce copyright material.

Dr Jenny Baker, of the Elsevier Scientific Publishing Co., Amsterdam, for quotations from L. M. Rose, appearing on pp. 222–3.

Battelle Institute, and Dr Oberkampf, for Fig. 6.15.

Cambridge University Press, for Figs. 8.8 and 8.10.

R. G. Coyle, for Fig. 8.16.

N. Davis, for Figs. 8.12, 8.13 and 8.14.

Financial Times, for Figs. 8.17(a) and (b).

Futures, for Figs. 9.3(d) and 9.4(a).

The Futures Group and J. Stover, for Figs. 8.18 and 8.19.

Ralph Jones, of *Futures*, for the quotations from Gordon and Hayward's papers, appearing on pp. 243ff.

Miss Joan K. Lince, of John Wiley Inc. of New York, for Table 9.4, taken from Dalby and Cetron & Ralph.

C. Ralph MacNulty, for Table 6.1 and Figs. 6.13 and 6.14.

O.E.C.D., for Fig. 2.1(b).

Patents & Licensing, for Fig. 8.7.

E. F. Parker, for Fig. 9.4(a).

Pergamon Press, for reproductions from *Long Range Planning*: Table 9.2 (vol. 5, no. 4), Fig. 9.3(c) (vol. 5, no. 4) and Fig. 9.4(d) (vol. 5, no. 2).

Pergamon Press and P. Chapman, for Fig. 6.16 and quotations on pp. 149–50.

Prentice Hall, Inc., and R. U. Ayres, for Fig. 8.5(b).

R & D Management, and the authors, for Fig. 7.8 (H. Beastall), Fig. 9.5 (H. Catling), Fig. 7.9 (J. M. Hubert) and Figs. 7.10(a) and (b) (P. M. S. Jones).

Dr. Roland H. Scheuchzer, of The Verlag Industrielle Organisation, Zurich, for Fig. 6.6.

Science & Technology, for Fig. 8.9.

University of Bradford, for Fig. 8.5(a).

The authors also wish to thank Professor James R. Bright and Kenneth

J. Craver, for discussions about their numerous publications, to which various references have been made, and to thank Philip Holroyd for the topics described on pp. 128–35.

We have been unable to trace the copyright holder of Fig. 8.3.

Introduction 1

Forecasting for Technology—where we stand today 3
The purpose and layout of the book 3

PART 1 THE ROLE OF FORECASTING IN PLANNING DECISIONS 7

1 The Planner's Need For Forecasts 9
Why forecast? 9
The unpredictable 14
What is technological forecasting 16
The role and use of forecasting in planning 17
What makes forecasting possible? 22
Forecasting is not a mechanistic process 24
Technology as part of the total environment 26
The need for a systematic approach 27
Historical development of forecasting for technology 31

2 Technological Growth Patterns and Their Influence on Planning 34
Introduction 34
Investment patterns in technology 35
Financial constraints on technological progress 35
Effectiveness of investment in technology 40
The size of industrial investments 41
New directions for technological progress 41
Depletion of raw materials 42

Environmental concern 43
Financial cross-impact 44
The forecasting model 45
Interpreting the planning significance of a technology forecast 49

3 Towards Systematic Forecasting 53
Forecasting for all purposes 53
The need for a systematic approach 55
The comprehensive forecast and its four elements 60
1 Qualitative 60
2 Quantitative 61
3 Time 62
4 Probability 62
Levels of a forecast: Disaggregation and re-assembly 64
The deployment of the Delphi and Cross-impact techniques in systematic TF 66
Concluding remarks on systematic technology forecasting 69

4 The Deployment and Practice of Technology Forecasting 71
Introduction 71
Initial deployment of technology forecasting in an organisation 72
The first cycle of TF activity–The company-wide approach 75
General approach to the collection of scenarios–Stage 1A 76
Specific approach to collection of scenarios–Stage 1B 76
Preliminary screening of scenarios–Stage 2 78
Conduct of a Delphi study on surviving scenarios–Stage 3 79
Subsidiary value of TF Studies: Motivation 80
Continued deployment of TF in an organisation 81
1 Procedures 81
2 Refinement of surviving forecasts 81
3 Use of other TF techniques 82
4 The use of TF at lower levels in an organisation 82
5 The collection of scenarios and signals of change 82
Specific TF studies 83
1 Morphology 83
2 Time-series 84
3 Substitution forecasting 84
4 Disaggregation of high level technologies and modelling 84

5 Broad technologies with multiple economic and social facets 85

PART 2 TECHNIQUES OF SYSTEMATIC TECHNOLOGY FORECASTING 89

5 *The Elements of a Forecasting System* 91
The four elements of a forecast and the techniques which contribute to them 91
Techniques for the generation of scenarios as the qualitative element 92
Techniques for forecasting the quantitative element 93
Techniques for forecasting the element of time 94
Techniques for the assessment of probability 95
How the techniques are handled in this book 95

6 *Qualitative Forecasting Methods* 97
Introduction 97
Brainstorming and related creativity-spurring techniques 98
The concept underlying the technique 98
The methodology 101
Practical applications 102
Discussion 104
References 105
Time independent contextual mapping 106
The concept underlying the technique 106
The methodology 108
Practical applications 109
Discussion 111
References 111
Analogies 112
The concept underlying the technique 112
The methodology 113
Practical applications 115
Discussion 117
References 118
Morphology 119
The concept underlying the technique 119
The methodology 121
Practical applications 122
Discussion 126
References 127
Gap analysis 128
The concept underlying the technique 128

The methodology 130
Practical applications 131
Discussion 135
References 135
Environmental surveillance and monitoring 137
The concept underlying the technique 137
The methodology 138
Practical applications 139
Discussion 140
References 140
Scenarios 141
The concept underlying the technique 141
The methodology 143
Practical applications 147
Discussion 151
References 152
Delphi in forecasting the qualitative element 153
References 154

7 *Quantitative Forecasting Methods* 155
Introduction 155
Attributes and parameters 156
Essential features of attributes and parameters 158
Some further notes on parameters 161
Important sources of parameters 163
Leading parameters 163
Quantified analogies 163
Substitution parameters 163
Learning curve parameters 163
Functional form of use of parameters 164
Models as a basis of time series forecasting 166
References 166
Relevance trees 167
The concept underlying the technique 167
Top-Down planning 168
Bottom-Up planning 169
The methodology 170
Practical applications 175
Discussion 177
References 179
Delphi in forecasting the quantitative element 180

8 *Time Forecasting Methods* 181
Introduction 181
Simple time-series 182

此为试读,需要完整PDF请访问: www.ertongbook.com

The concept underlying the technique 182
The methodology 183
Practical applications 184
Discussion 185
Growth and logistic curves 185
The concept underlying the technique 185
The methodology 186
Practical applications 189
Discussion 189
Envelope curves 190
The concept underlying the technique 190
The methodology 191
Practical applications 193
Discussion 193
Quantified analogies 194
The concept underlying the technique 194
The methodology 195
Practical applications 196
Discussion 201
Substitution curves 201
The concept underlying the technique 201
The methodology 202
Practical applications 205
Discussion 205
Dynamic modelling 207
The concept underlying the technique 207
The methodology 208
Practical applications 211
Discussion 211
Subjective time forecasts 212
Concepts underlying the techniques 212
The methodology 213
Practical applications 213
Discussion 213
Compound techniques 215
References 217

9 Probability Forecasting Methods 219
Introduction 219
Approaches to subjective judgement 220
References 225
The Delphi technique 225
The concepts underlying the technique 225
The methodology 227
Practical applications 236

Discussion 239
Selected Bibliography 241
General references 241
Delphi critiques and evaluations 242
Delphi applications 242
Cross-impact analysis 243
The concept underlying the technique 243
The methodology 247
Practical applications 249
Discussion 254
References 256

Index 259

List of Figures

PART 1

Figure 1.1 The process of forecasting technology 16
1.2 Basic model of corporate planning process 18
1.3 Input of forecasting to information base of basic planning model 20
1.4 Causality of technological progress 24
1.5 Technological innovations and the total environment 28
2.1 (a) Investment in research & development in UK & USA as a percentage of GNP 36
(b) Changes in the relative amount of resources devoted to R & D 1963–71 37
2.2 Technological progress as a function of investment 38
2.3 Technological progress as a function of time at various investment rates 39
2.4 The effect of financial cross-impact on the allocation of research & development expenditure 44
2.5 Technology forecasting requires knowledge about the availability and allocation of the funds which determine technological progress 46
2.6 Modification of investment patterns 47
2.7 Modification of time-series technology forecasts 49
3.1 Disaggregation of a technology forecast to subunit forecasts and their re-assembly 59
3.2 Disaggregation of scenarios 65
4.1 Broad stages in the first cycle of technology forecasts on the basis of a company-wide approach 77

PART 2

6.1 Contextual map sh[illegible] dination chemistry can [illegible] linke[illegible] ments in other fields 107

6.2 Contextual map of the principal innovation stages leading to the development of high performance jet engine lubricants 108
6.3 Contextual map of the 'System–Food' 110
6.4 Morphological matrix for textile wet-processing systems 119
6.5 Morphological matrix for laminated products system 124
6.6 Morphological matrix for clocks (Boesch) 125
6.7 Interpolation in a linear series of properties 128
6.8 Schematic matrix of the periodic table of elements 129
6.9 Interpolation in a ternary system of composition 130
6.10 Properties of a fundamental particle 133
6.11 Innovation results from a combination of events occurring over time 136
6.12 Generation of alternative scenarios 143
6.13 Scenario writing as a systematic step-by-step process 145
6.14 Cross-impact matrix for scenario development 146
6.15 Sequential analysis of events for scenario generation 149
6.16 A typical exhibit from a scenario–the use of fuel in private motor cars in three scenario projections 150
7.1 Triangular component diagram for the armoured fighting vehicle showing three essential attributes 159
7.2 Time series extrapolation of learning curve type showing;
a. the normal form
b. the log function form of the parameter 164
7.3 Choice of functional form of parameter in relation to time scale 165
7.4 Relevance tree for research planning 170
7.5 Relevance trees–intermediate levels should not be eliminated 173
7.6 Tree with Relevance Numbers 173
7.7 Relevance tree and other forecasting techniques 174
7.8 Relevance-activity matrix used by the research and development department of the British Post Office 176
7.9 Relating corporate and R & D policies through a back-to-back relevance tree by Unilever Research 177

7.10 (a) Relevance trees for technical missions—hydrostatic extrusion of metal 177
7.10 (b) Relevance trees for technical missions—air pollution control 178
8.1 Forecast errors due to data inaccuracy 184
8.2 The S-curve 186
8.3 Growth curve for a non-technological parameter—vehicle ownership in the UK 188
8.4 What can happen when the businessman ignores the S-curve 190
8.5 Growth and envelope curves for computer technology 192
8.6 Diagrammatic illustration of forecasting by quantified analogy 196
8.7 Trends of time series changes of multi-level development for electrodeposition coating technology 197
8.8 Special presses–diffusion of information and adoption compared 198
8.9 Propagation frequency–time lag between achievements in laboratory and first commercial application 199
8.10 Geographical lags in technological diffusion 200
8.11 Substitution curves 203
8.12 Plot of f/1–f 204
8.13 Extrapolation of Fisher-Pry function 204
8.14 Forecast of substitution of continuous for ingot slab casting 205
a. As a percentage of the total
b. In terms of total production worldwide taking growth into account
8.15 Simplified schematic diagram showing some of the influences in electric car development 209
8.16 Influence diagram for a production forecasting model 210
8.17 Cost of a three minute telephone call 213
a. London to Glasgow
b. London to New York
8.18 Trend impact analysis 216
8.19 Event impact estimates 217
9.1 Step-by-step development of a cumulative probability curve 223
9.2 Probability/time distributions based on Delphi responses 224
9.3 Delphi study graphical displays 234–5

9.4 (a) Example of qualitative Delphi questions for U.S. economists 237
9.4 (b) Example of qualitative Delphi questions—question and analysis presentation in the field of personnel administration, submitted to three separate groups of people 238
9.5 Cascade Delphi–Shirley Institute Textile Industry study 239
9.6 Illustration of cross-impact analysis between four events 245
9.7 Multi-purpose cross-impact analysis form 248
9.8 Illustration of computer print-out for one event 253
