Contents

	Preface	15
	Acknowledgments	17
1	Gynaecological Examination	18
2	The Anatomy of the Female Genital Tract	24
3	Malformations of the Female Genital Tract	37
4	Intersex	49
5	The Menstrual Cycle and Menstruation	53
6	Disorders of the Menstrual Cycle	73
7	Abnormal Uterine Bleeding	76
8	Amenorrhoea and Oligomenorrhoea	83
9	Human Sexuality	89
10	Infertility or Childlessness	103
11	Conception Control	114
12	Abortion	127
13	Infections of the Genital Tract	139
14	The Vulva	147
15	The Vagina	159
16	The Cervix	163
17	The Endometrium	183
18	Benign Enlargements of the Uterus	193
19	Endometriosis	198
20	Trophoblastic Disease	206
21	Uterine Displacements and Uterovaginal Prolapse	214
22	Ectopic Gestation and Non-infective Diseases of the Oviduct	222
23	The Ovary	228
24	Accidents and Injuries	240
25	The Urinary Tract and its Relationship to Gynaecology	244
26	The Breast in Gynaecology	250
27	Paediatric Gynaecology	254
28	Adolescence and Puberty	259
29	The Climacteric and After	265
30	The Sex Hormones in Gynaecology	272
	Bibliography	281
	Index	284

Illustrations and Tables

FIGURES

1/1	Sequence of examination of the breast	page 19
1.	Inspection of the breasts—the patient's arms at her side	
2.	Inspection of the breasts—the patient's arms raised above her head	
3.	Supraclavicular palpation	
4.	Axillary palpation	
5.	Palpation of the inner half of the breast	
6.	Palpation of the outer half of the breast	
1/2	Introducing the bivalve (Cusco) speculum	21
1/3	The patient in the left lateral position, a Sims speculum has been inserted into the vagina	21
1/4	Bimanual examination of the uterus	22
1/5	Bimanual palpation of the adnexal area	22
2/1	The vulva of a virgin	24
2/2	The vulva of a parous woman	25
2/3	Dissection of the perineum to show the superficial muscles, the position of Bartholin's gland and the vestibular bulb	26
2/4	Schematic diagram showing the distribution of lymphatics of the vulva	26
2/5	Sagittal section of the pelvis, with the woman in the erect position	27
2/6	The vagina in cross-section	27
2/7	The relationship of the parametrium to the vagina and other pelvic organs	28
2/8	Cyclic changes in the vagina related to age	29
2/9	The vaginal arterial blood supply and lymphatic drainage shown diagrammatically	30
2/10	The uterus from the side showing the anatomical relations	31
2/11	Coronal section of the uterus	31
2/12	The female pelvic organs viewed from behind	32
2/13	The 'ligaments' of the cervix	33
2/14	The blood supply of the uterus, oviduct and ovary	34
2/15	The lymphatic drainage of the female genital organs	34
2/16	The oviduct, showing the structure of the mucosal layer	35
2/17	The position of the ovary, viewed from the front	36
3/1	(A) The development of the ovary	
	(B) The primordial germ cells migrate into the genital ridge about 20 days after conception	37
3/2	The development of the genital organs	39
3/3	Differentiation of the female external genitalia	40
3/4	Possible chromosomal patterns resulting from non-disjunction	41
3/5	Buccal mucosal cells showing the sex chromatin (Barr body)	42
3/6	Haematocolpos due to imperforate hymen	44
3/7	Common malformations of the genital tract	45
3/8	Schematic representation of pairing of chromosomes and chiasma formation	46

3/9	Mitosis in animal cells	page 47
4/1	Gonadal dysgenesis	51
4/2	Testicular feminization	51
5/1	Diagram showing hypothalamus-pituitary-ovarian-uterine relationship	53
5/2	Pathways of sex hormone synthesis	54
5/3	The infantile uterus compared with the adult uterus	55
5/4	The change in the size of the uterus, the oviducts and ovaries with advancing age	56
5/5	Hormone levels in the normal menstrual cycle	58
5/6	Corpus luteum	59, 60
5/7	Corpora albicantia	61
5/8	Endometrium—early menstrual phase	62
5/9	Endometrium—early proliferative phase	63
5/10	Endometrium—late proliferative phase	64
5/11	Endometrium—early secretory phase	65, 66
5/12	Endometrium—6 days after ovulation	67
5/13	Endometrium—12 days after ovulation	68
5/14	Diagram of endometrial vascular patterns	69
5/15	Cervical mucus—ferning	70
5/16	Vaginal exfoliative cytology—late proliferative phase	71
5/17	Vaginal exfoliative cytology—luteal phase	71
7/1	Proliferative endometrium	77
7/2	A uterus enlarged by myohyperplasia	78
7/3	Endometrium showing cystic hyperplasia	81
8/1	Asherman's syndrome	84
8/2	Galactorrhoea—Chiari-Frommel syndrome	86
9/1	The orgasmic response in women	92
10/1	Model of cervical mucus showing the helical 'tunnels' which form in the ovulatory phase	105
10/2	Tracings of carbogen insufflation of the tubes	106
10/3	(A) Hysterosalpingogram showing a normal uterus and tubes	107
	(B) A film taken some hours later confirmed that oil was present in the peritoneal cavity and the tubes were patent	107
10/4	(A) Hystrogram showing bilateral cornual block	108
	(B) A film taken some hours later confirmed that no oil had reached the peritoneal cavity	108
10/5	A biphasic temperature chart	111
10/6	Vaginal smear showing predominantly irregularly shaped, folded intermediate cells, which characteristically form clumps	111
10/7	Cervical mucus, day 19 of an anovulatory cycle	112
11/1	Increase in world population	114
11/2	The vaginal diaphragm (or 'Dutch cap'), and technique of using the diaphragm	117
11/3	Currently used I.U.Ds	124
11/4	Method of tubal excision and ligation	126
12/1	Blighted ovum	128
12/2	Types of abortion	129
12/3	The use of sponge forceps for clearing placental tissue from the uterus	131
12/4	Carneous mole	134
12/5	Missed abortion	134
12/6	Cervical incompetence	135
13/1	Diagram of route of spread of gonococcal infection	140

13/2	Diagram of route of spread of pyogenic infection	page 141
13/3	Bilateral chronic salpingitis	143
13/4	Bilateral pyosalpingitis—the appearance at operation	144
13/5	Hydrosalpinx	144
13/6	Diagram of chronic pelvic cellulitis	145
14/1	The multiparous vulva	148
14/2	Lymphatic drainage of the vulva	148
14/3	Histology of normal vulval skin	149
14/4	Atrophic patterns	150
14/5	Hypertrophic patterns	151
14/6	Dysplasia	152
14/7	Sites from which a biopsy should be made	153
14/8	Pre-invasive carcinoma of the vulva	154
14/9	Squamous cell carcinoma of the vulva	155
14/10	(A) Drawing of a vulval carcinoma in the anterior part of the vulva (B) Photograph of a large fungating vulval carcinoma arising in the posterior part of the vulva	154 156
14/11	Extent of operation of radical vulvectomy	156
15/1	Changes in the vaginal epithelium and acidity related to the woman's age	160
15/2	Trichomonas vaginalis	161
15/3	Candida albicans	161
16/1	Coronal section of the cervix and upper vagina	163
16/2	The structure of the cervix	164
16/3	The squamo-columnar junction	164
16/4	Typical transformation zone	165
16/5	A retention cyst (Nabothian follicle) viewed through the colposcope	166
16/6	In the first illustration the cervix has been exposed with a bivalve vaginal speculum. The second illustration shows the same cervix after closing the speculum	167
16/7	A cervical polyp	168
16/8	Normal squamous epithelium which covers the vaginal portion of the cervix	169
16/9	Normal exfoliated cervical cells; in the centre of the field two ciliated endocervical cells can be seen	170
16/10	Dysplasia of low degree	171
16/11	Dysplasia of high degree	172
16/12	Exfoliated cervical cells showing 'malignant-looking cells'	173
16/13	Cervical biopsy from the same patient showing 'carcinoma-in-situ'	174
16/14	Diagram showing the 'life cycle' of unstable cervical epithelium	175
16/15	Methods of obtaining cells from the cervix for cytological examination, (1) using a special wooden spatula, and (2) using a cotton-tipped swab stick	176
16/16	Diagram showing how the raw bed from which the cone has been removed is covered with flaps of cervical epithelium	177
16/17	Carcinoma of the cervix—gross specimen	179
16/18	The histological appearances of carcinoma of the cervix	180
17/1	The use of sponge forceps to secure and remove endometrial polyps	183
17/2	The microscopic appearance of curettings showing cystic hyperplasia	184
17/3	Endometrial carcinoma: localized in the fundal area	186
17/4	Endometrial carcinoma—well differentiated cells	187
17/5	Endometrial carcinoma—poorly differentiated, anaplastic type	187
17/6	Adenoacanthoma	188
17/7	Adenoacanthoma-in-situ. The change has occurred in a polypoid endometrium	188
17/8	The lymphatic drainage of the uterus	189

18/1	The development of myomata shown diagrammatically	page 193
18/2	A large cervical myoma	194
18/3	The gross appearance of a myoma is shown in this specimen, which also has a pyometra and a carcinoma of the cervix	194
18/4	The microscopic appearance of a myoma	195
18/5	Myohyperplasia	197
19/1	The microscopic appearance of adenomyosis	199
19/2	Adenomyosis—gross specimen	200
19/3	Common and uncommon sites of extra-uterine endometriosis	201
19/4	Extra-uterine endometriosis	202
19/5	Basal body temperature chart from a case of endometriosis and infertility	202
19/6	Algorithm of the management of endometriosis	203
20/1	Benign trophoblastic tumour (hydatidiform mole)	207
20/2	Microphotograph of a benign trophoblastic tumour (hydatidiform mole)	208
20/3	Malignant trophoblastic tumour—choriocarcinoma	209, 210
20/4	Chorionic gonadotrophin excretion in trophoblastic disease	211
20/5	Echogram of hydatidiform mole	211
20/6	The patient was aged 37, gravida 6 and was admitted bleeding, having expelled a benign trophoblastic tumour 6 weeks previously. Examination showed a bulky uterus, and the urinary chorionic gonadotrophin level was 8×10^6 units per 24 hours. A hysterectomy revealed a malignant trophoblastic tumour; gross specimen shown.	211
21/1	Retroversion and retroflexion of the uterus	215
21/2	Manipulation of the retroverted uterus	216
21/3	The use of a Hodge pessary to correct the position of a retroverted uterus	216
21/4	The Hodge pessary	217
21/5	Cystocele	217
21/6	Enterocoele and rectocele	218
21/7	Diagram showing degrees of uterine prolapse	218
21/8	The transverse cervical 'ligament'	219
21/9	The 'chicken wire' analogy. In (A) the areolar tissue is not stretched; in (B), because of the uterine descent, condensation of the tissue occurs, with the appearance of a ligament	219
21/10	Mechanism of prolapse	220
21/11	The polythene ring pessary	221
22/1	Sites of ectopic gestation implantation	222
22/2	The sequelae of tubal abortion shown diagrammatically	223
22/3	The sequelae of tubal rupture, (A) intraperitoneal haemorrhage and pelvichaematoma, (B) broad ligament haematoma	224
23/1	The development of the ovary	228
23/2	Radiograph of the lower abdomen showing a benign teratoma which contains a tooth	230
23/3	Torsion of an ovarian tumour, in this case a dermoid	231
23/4	The microscopic appearance of pseudomucinous cystadenoma	232
23/5	Diagram to show how daughter cysts form in the wall of a pseudomucinous cystadenoma	233
23/6	Pseudomucinous cystadenoma	234
23/7	The microscopic appearance of a serous cystadenoma	235
23/8	Gross appearance of a serous cystadenoma	235
23/9	A benign teratoma showing hair, sebaceous material and teeth	236
23/10	A broad ligament cyst, note how the oviduct curves over the surface of the cyst	239

24/1	A large vulval haematoma	page 240
24/2	Marked perineal deficiency	241
24/3	A complete or third degree tear	241
24/4	Cervical laceration, stellate in shape	242
24/5	Vesicovaginal fistula	242
25/1	The relations of the urinary tract within the pelvis	244
25/2	The trigone of the bladder	245
25/3	(A) Tracing from radiograph of the bladder and urethra at rest	246
	(B) Tracing from radiograph of the bladder and urethra made during micturition	246
25/4	Urethral prolapse, and urethral caruncle.	248
26/1	The anatomy of the breast	250
27/1	Ambiguous external genitalia due to the adrenogenital syndrome	255
28/1	Diagram showing the menarche in relation to growth and breast development in adolescence	259
29/1	The reduction in the size of the uterus in old age	267
30/1	The biosynthesis of ovarian steroids	273
30/2	The metabolism of oestrogen, as determined by J. B. Brown	274
30/3	Urinary oestrogen excretion (in mg /24 hours) in certain gynaecological conditions related to the menstrual cycle	274

TABLES

1/1	Causes of abdominal prominence	20
4/1	A classification of intersexual anomalies	50
7/1	Hormone therapy in dysfunctional uterine bleeding	82
8/1	Dosage of clomiphene citrate	86
9/1	Sexual dysfunctions	97
9/2	Algorithm of management of sexual problems	98
10/1	Factors influencing fertility	104
10/2	Normal semen (lower limits)	104
11/1	The effectiveness of modern contraceptives	115
11/2	The side-effects of oral contraceptives	120
11/3	Mortality from venous thrombosis	122
11/4	Intra-uterine contraceptive device: statistics	125
12/1	Aetiological factors in 5000 abortions	127
12/2	Threatened abortion: prognosis from colour of the bleeding	130
14/1	The itchy vulva: aetiology	148
16/1	Cancer of female genitalia: incidence	178
16/2	Clinical stages of carcinoma of the cervix	180
16/3	Squamous carcinoma of the cervix: survival rates	181
17/1	Clinical staging of carcinoma of the corpus uteri	190
17/2	Hormonal treatment of endometrial carcinoma	191
17/3	The treatment and 5-year survival rate of endometrial cancer related to the stage of the disease	192
20/1	Classification of trophoblastic neoplasms	206
20/2	Follow-up of benign trophoblastic disease	212
20/3	Management of malignant trophoblastic disease	212
22/1	Symptoms and signs in ectopic gestation	225
22/2	Common conditions confused with ectopic gestation	226

ILLUSTRATIONS AND TABLES

23/1	Classification of ovarian tumours	page 231
23/2	Chemotherapy in ovarian carcinoma	238
26/1	Benign tumours of the breast	253
27/1	Diagnostic procedures in female intersex	254
27/2	Vulvovaginitis: causes	256
27/3	Ovarian tumours in children	257
27/4	Hormonal assays pertinent to the study of abnormal sexual development in female children	257
27/5	Differential diagnosis of precocious puberty	257
28/1	Time of appearance of sexual characteristics in Australian girls	260
28/2	Primary amenorrhoea	261
28/3	Secondary amenorrhoea in unmarried adolescents	261
28/4	Ovarian tumours in adolescents	264
29/1	Total oestrogens in postmenopausal women	265
29/2	Predominant menopausal symptoms	268
29/3	Causes of postmenopausal bleeding	270
30/1	To show the relative potency and equivalent doses of some commonly used oestrogens	275
30/2	The use of stilboestrol to suppress lactation	276
30/3	Gestagens in use today	278
30/4	The equivalent dose of various gestagens required to produce secretory changes in the endometrium of oestrogen-primed castrated women over a period of 10 days	279

TABLES

20	Causes of abnormal prothrombin	1/1
20	A classification of intersex anomalies	4/1
82	Hormone therapy in dysfunctional uterine bleeding	7/1
86	Therapy of uterine fibroids	8/1
97	Sexual dysfunction	9/1
98	Algorithm of management of sexual problems	9/2
104	Factors influencing fertility	10/1
104	Normal sperm (lower limit)	10/2
112	The effectiveness of modern contraceptives	11/1
120	The side effects of oral contraceptives	11/2
122	Menstrual flow measurement	11/3
122	Intra-uterine contraceptive device: statistics	11/4
127	Pathological factors in 3000 abortions	12/1
130	Threatened abortion: prognosis from colour of the bleeding	12/2
148	The luteal phase: aetiology	14/1
178	Causes of female genital prolapse	16/1
188	Clinical stages of carcinoma of the cervix	16/2
187	Statistics: carcinoma of the cervix: survival rates	16/3
190	Clinical stages of carcinoma of the corpus uteri	17/1
191	Hormonal treatment of endometrial carcinoma	17/2
192	The treatment and 5-year survival rate of endometrial cancer related to the stage of the disease	17/3
200	Classification of trophoblastic neoplasms	20/1
212	Follow-up of benign trophoblastic disease	20/2
212	Management of malignant trophoblastic disease	20/3
222	Symptoms and signs in ectopic gestation	21/1
228	Common conditions confused with ectopic gestation	21/2
