PRESIDENT

The drug information and recommended dosages provided in this book are based largely on the manufacturers' current package labeling and have not been independently tested or verified. The purpose of the *Compendium of Drug Therapy* is to supply health-care practitioners with frequently needed drug information in a consistent, rapidly accessible format; it is not intended to replace or substitute for the complete prescribing information required by the Food and Drug Administration for prescription products.

Although great care has been taken in compiling and editing the information presented in this work to ensure its accuracy and thoroughness, neither the Editors nor Publisher can accept any responsibility for the continued currency of the information contained herein, for any errors or omissions, whether caused by negligence or otherwise, or for any consequences whatsoever arising from use of this information. Because information on drugs undergoes frequent change as a result of continuing research and clinical experience, the reader is advised to consult the manufacturer before prescribing or administering any unfamiliar or infrequently used drug to be sure that changes have not occurred in the recommended dosage or contraindications. A directory of drug-information telephone numbers of pharmaceutical companies is provided for this purpose.

Individual drugs were selected for this book mainly because of their frequent clinical use; other products were added on the recommendation of the Editorial Advisory Board to make the *Compendium of Drug Therapy* as complete and useful as possible without making it unwieldy in size. The inclusion of a particular product in this book, however, does not imply that the Editors, Editorial Advisory Board, or Publisher endorses or recommends its use or considers it to be clinically superior to similar products available under other trade names.

The *Compendium of Drug Therapy* is distributed annually on a controlled circulation basis to qualifying health-care practitioners. Additional copies are available only from the Publisher: Biomedical Information Corporation, 800 Second Avenue, New York, NY 10017. An order form for purchasing additional copies is provided inside the back cover.

Preface

The *Compendium of Drug Therapy* was developed to meet the health-care practitioner's need for drug information that is at once reliable and comprehensive and yet easily accessible. The drugs covered in depth in this volume represent more than 95% of the medications prescribed by primary care physicians. In addition, basic prescribing information for less frequently used drugs is provided in summary tables. The information is organized according to therapeutic category (see section 1) and can be located by either brand or generic name in the general index or by searching for the drug on the contents page that begins each therapeutic section.

CHART FORMAT AND INFORMATION

The charts provided in this book are based on the manufacturers' most recent package literature and include all current FDA-approved indications. The dosages listed are those recommended by the manufacturer for patients with normal renal and hepatic function. Advice on altering dosages for patients with renal impairment or other special-risk conditions, as well as on the frequency of dosage adjustments, the preparation and delivery of parenteral solutions, and other essential dosage information, is provided in the section headed "Administration/Dosage Adjustments."

All contraindications and pertinent warnings and precautions given by the manufacturer are provided in edited form for conciseness and rapid access. The basic premise underlying the editing of material for these sections was to restrict the information to that considered practical and clinically relevant to the safe and effective use of the drug described. Additional precautions pertaining to the use of the drug in children and in pregnant and lactating women are provided in the boxes at the end of each chart. Also supplied in some instances are appropriately referenced precautions not contained in the manufacturer's package insert but pertinent to the use of the drug in special groups of patients, such as those with hepatic failure.

All adverse reactions reported by the manufacturer are listed according to the organ system affected and generally in order of decreasing frequency. Where known, reactions occurring in 1% or more of patients are printed in *italics*; some of the charts also provide data, when available, on the incidence of particular reactions. The charts also supply overdosage information and summaries of clinically significant drug interactions and altered laboratory values. The information provided in these sections is frequently supplemented by data from the current medical literature.

OTHER FEATURES

In addition to prescribing information, the *Compendium* contains several other features designed to help meet your drug-information needs:

- For quick access to information on a specific drug, a single index, listing drugs alphabetically by both brand name and generic composition, is provided in section 2.
- A full-color drug-identification guide is provided in section 3 to help you identify an unfamiliar drug by color, size, shape, and manufacturer's code number. This section also contains a directory of pharmaceutical manufacturers with emergency numbers you can call for further drug information around the clock, 365 days a year.
- A directory of drug information centers, poison control centers, comprehensive cancer centers, pain clinics, and other patient counseling and referral services is provided in section 1, under the heading "referral centers."

KEEPING UP WITH NEW DRUG INFORMATION

As new drugs are introduced—and new information on existing drugs becomes available—the *Compendium* may be kept up-to-date by using the monthly *Compendium Update* supplements that appear in *Drug Therapy* magazine. These supplements can be saved in the special pocket provided inside the back cover of this volume. Instructions for using the supplements and the yellow labels provided with this book will be found periodically in the *Compendium*. A new, completely revised edition of the *Compendium* is published each year.

Critical Equipment:

For the seriously ill, an elemental diet can be critical support equipment. Vital® High Nitrogen, delivers complete and balanced nutrition, with excellent tolerance.

Vital High Nitrogen helps support recovery and prevent the alarming signs and resulting complications of malnutrition.

Equip the stressed patient with these critical nutritional benefits:

- ☐ high nitrogen absorption from a dual system of peptides and amino acids
- ☐ efficient fat absorption from medium-chain triglycerides and safflower oil
- ☐ 100% of the RDA for vitamins and minerals in 1500 Calories
- ☐ low residue from easily digested and absorbed nutrients

Vital® High Nitrogen
Nutritionally Complete,
Partially Hydrolyzed Diet

Referral Centers

Drug Information Centers

The following centers provide answers by telephone to routine questions about drugs—identification, availability, therapeutic uses, dosage, side effects, drug interactions, etc.—and can often offer advice on specific therapeutic problems. In addition, many centers follow up verbal communications with written reports, provide comprehensive evaluations of new drugs and information on investigational compounds and uses, publish newsletters and bulletins, and serve as regional poison control centers. These services are usually available free of charge to all health-care professionals in the region served by the center.
