## **UNDERSTANDING VIDEO**

# The SAGE CommTEXT Series

Series Editor:

**EVERETTE E. DENNIS**

*Gannett Center for Media Studies, Columbia University*

**Founding Editor: F. GERALD KLINE**, *late of the School of Journalism and Mass Communication, University of Minnesota*

**Founding Associate Editor: SUSAN H. EVANS**, *Annenberg School of Communications, University of Southern California*

The **SAGE CommText** series brings the substance of mass communication scholarship to student audiences by blending syntheses of current research with applied ideas in concise, moderately priced volumes. Designed for use both as supplementary readings and as "modules" with which the teacher can "create" a new text, the **SAGE CommTexts** give students a conceptual map of the field of communication and media research. Some books examine topical areas and issues; others discuss the implications of particular media; still others treat methods and tools used by communication scholars. Written by leading researchers with the student in mind, the **SAGE CommTexts** provide teachers in communication and journalism with solid supplementary materials.

## *Available in this series:*

1. TELEVISION IN AMERICA  
*George Comstock*
2. COMMUNICATION HISTORY  
*John D. Stevens and Hazel Dicken Garcia*
3. PRIME-TIME TELEVISION:  
Content and Control  
*Muriel G. Cantor*
4. MOVIES AS MASS COMMUNICATION  
*Garth Jowett and James M. Linton*
5. CONTENT ANALYSIS: An Introduction  
to Its Methodology  
*Klaus Krippendorff*
6. INTERPERSONAL COMMUNICATION:  
The Social Exchange Approach  
*Michael E. Roloff*
7. THE CARTOON: Communication to  
the Quick  
*Randall P. Harrison*
8. ADVERTISING AND SOCIAL CHANGE  
*Ronald Berman*
9. COMPARATIVE COMMUNICATION  
RESEARCH  
*Alex S. Edelstein*
10. MEDIA ANALYSIS TECHNIQUES  
*Arthur Asa Berger*
11. SHAPING THE FIRST AMENDMENT:  
The Development of Free Expression  
*John D. Stevens*
12. THE SOAP OPERA  
*Muriel G. Cantor and Suzanne Pingree*
13. THE DISSIDENT PRESS: Alternative  
Journalism in American History  
*Lauren Kessler*
14. TELEVISION AND CHILDREN: A Special  
Medium for a Special Audience  
*Aimée Dorr*
15. PRECISION JOURNALISM:  
A Practical Guide  
*David Pearce Demers and Suzanne Nichols*
16. PUBLIC RELATIONS:  
What Research Tells Us  
*John V. Pavlik*
17. NEW ELECTRONIC PATHWAYS:  
Videotex, Teletext, and  
Online Databases  
*Jerome Aumante*
18. THE TELEVISION NEWS INTERVIEW  
*Akiba A. Cohen*
19. UNDERSTANDING VIDEO:  
Applications, Impact, and Theory  
*Jarice Hanson*
20. EXAMINING NEWSPAPERS:  
What Research Reveals About  
America's Newspapers  
*Gerald Stone*

*additional titles in preparation*

## ACKNOWLEDGMENTS

This book could not have been written without the guidance and friendship of people for whom I hold the greatest respect and admiration. At Northwestern University, Steve May, John Gartley, Lynn Gartley, Lou Castelli, and (of course) Martin Maloney added to my perspectives and challenged me to create. At U-Mass, Dianne Cherry, Sut Jhally, Michael Morgan, Barnett Pearce, and Bill Venman have kept me moderately sane. It has also been a privilege to work and share laughter through the years with Dan (Mad Dog) Bardy, Cynthia Gottshall, Nancy Grange, Dick Hutter, Chris Miller, Michael Rapp, and Caryn Trungale-Sova.

To Everette Dennis I owe many thanks for taking the chance and making this book become reality. To my parents, Rolf and Evelyn Hanson, I thank you for caring even when we did not quite agree, and to David Maxcy, who lived this book with me and reminded me that there is more to life than work, I thank you with all my heart.

## INTRODUCTION

There is an old folk saying, "Believe all of what you see, half of what you read, and none of what you hear." The importance of *visual* media in our society is something that bears investigation. This book has been written to explore one of the most common forms of visual presentation today, the video image, and the process of creating that image for communication. I owe a debt of gratitude to the many theorists who have contributed to our understanding of the importance of visual communication, most notably, to Rudolf Arnheim, and Gyorgy Kepes, and to the writings in television studies of Herbert Zettl and Arthur Asa Berger.

A fundamental concept to understanding the language of any form of communication is the relationship between the presented object and the nature of the act of perception on behalf of the individual who has observed the subject. Therefore, the concepts presented in this text rely upon the duality of perception; the presentation of an image, and the mental construction of the meaning of the image. To explore the various aspects of the impact of video communication, the text has been organized in three parts.

Part 1 (Chapters 1-3) examines what sets video apart from any other medium of communication. The section lays the groundwork for the construction of a theory based upon the presentational aspects of video as a form of visual communication, and suggests methods of analysis for the examination of different levels of video interactivity.

Part 2 (Chapters 4-6) explains some of the background of video as it has been introduced for specific purposes, such as arts and entertainment, home services, and business applications. This section describes many of the new technologies, their impact in their environments, and ways in which they extend our communication possibilities through video-related technologies.

Part 3 (Chapters 7-8) discusses the impact of the newer forms of communication by exploring the elements that structure our perceptions of their use. Chapter 8 articulates a theory of video that is based upon the unique characteristics of video and how they affect our consciousness.

The theory presented in this book is one approach to understanding the unique language of video communication, paying attention to the importance of the technology and the human elements that structure the individual's perception of the use of video and the video image. But a theory is useless if it does not reflect the many facets of the subject studied. For this reason, the application and impact of video-related technologies are also outlined in this text to provide background for the perceptual analysis of video form and content. The examples in this text are representative of the wide range of video technologies, as they are used today, or projected for use in the near future.

# I

## **VIDEO AS VISUAL COMMUNICATION**

## THE DEVELOPMENT OF VIDEO

**Video is a unique form of visual communication that has been influenced by historical factors, technical development, and criticism given to other forms of media.**

### WHAT IS VIDEO?

We hear the word “video” often today. “Video game,” “videodisc,” “MTV videos,” and “videocassette” are terms that are reflected in newspapers, on billboards, and on television with regularity—but what does it mean? The word *video* is often used to refer to an image on a screen. One definition explains the picture itself; a second definition suggests the process by which the image and sound have been recorded and reproduced by means of videotape. Both definitions have something in common: The image is shown to a viewer on either a television receiver, or something that looks like a television receiver called a monitor, or video screen. But because the technology that presents the image is, or looks like, a television set, is all video television, or all television video? Different applications of the term tend to confuse and frustrate critics, students, and consumers, all of whom think they have some understanding of what “video” really is.

The word video is actually a term that describes the picture component of a televised image. But in recent years, the term videotape has also been abbreviated through colloquial speech to “video,” which suggests that the reference is being made to the magnetic tape that records and plays back image and sound. When someone mentions “an MTV video,” or renting a “video” from the videocassette rental store—what they are referring to is the use of videotape to store and play both images and sound. In this latter case, the term does not directly refer to the televised image as the predominant feature of the message, but the software. Both definitions have differences and similarities.

The differences between the two definitions suggest an important factor: Video has changed from its early days, during which television was the primary means of using video, to an age in which the availability of video-related technologies has introduced several other contexts in
