# Poverty and Income Distribution

# Preface

This book developed as an outgrowth of my own course, “Poverty and Income Distribution,” which I have taught at New York University on and off since 1977. The textbook incubated over many years. Because of a scarcity of textbooks in the field in the 1970s, I developed my own set of lecture notes, which I later distributed to students. Over time, with feedback from students (the course typically had 40 students per semester), the lecture notes eventually evolved into this textbook. In this way, the textbook was constantly subjected to student reaction. Sections whose exposition was unclear were refined and rewritten. Topics that did not seem of interest to students were dropped and new ones added. The data used in the book were periodically updated.

The book also changed focus over the years. In the late 1970s, there were only inklings of the dramatic changes that were to befall the U.S. economy. The original focus of the course was on the measurement of inequality and poverty and explanations of inequality. Since the only well-developed models of inequality at that time were for labor markets, the course also had a heavy dose of labor economics. Moreover, at that time, the most widely used and most fully articulated model was human capital theory, so that considerable space was also devoted to this topic.

However, by the late 1980s, when the writing of this book began in earnest, the three-fold malady of falling real wages, stagnating living standards, and widening income disparities had become apparent. In addition, poverty rates, which had leveled off in the 1970s, began rising again in the 1980s. The numbers themselves tell a dramatic story. As a result, the book began to emphasize the actual statistics themselves as a way of telling the story of these disturbing changes in the U.S. economy (and other economies as well).

Some economists who teach in this field may feel that the book has, perhaps, an overdose of statistical evidence. Moreover, it is admittedly much harder to examine students on statistics than on economic theory. However, my own feeling is that numeracy is crucial in its own right. It is important to give students a feel for the actual magnitudes involved. If nothing else, an awareness of these figures will help students become more knowledgeable citizens and help them better understand the statistics that are periodically reported in our major newspapers and magazines.

The book maintains a strong emphasis on the role of labor markets. There are two reasons for this. First, about three-quarters of personal income arises from labor activities. Second, many public policy programs, most notably social security, are linked either directly or indirectly to labor market activities. This may create some overlap between this text and traditional labor economics, but the stress here is different – much more on the relation between labor activity and

inequality. In my treatment of the human capital model, for example, the stress is on the determination of earnings differences between individuals. The book also provides a wider coverage of models of the labor market than is found in more traditional labor economics courses. Institutional models are given particular attention – such as internal and dual labor market theory, inter-industry wage differentials and efficiency wage theory, and structural models – because of the recent stress on the demand side of the labor market as a source of earnings inequality.

A section of the book is devoted to the inequality of household wealth, which is my own research specialty. As it turns out, changes in inequality are much more dramatic in terms of household wealth than in terms of income. Indeed, it appears that changes in income inequality become magnified in terms of wealth disparities. There is again a heavy emphasis on the statistical evidence, though a chapter in this section treats the determinants of wealth differences between families. The major focus is on lifecycle theory, since it is still the primary model on this subject. However, there is also a lengthy discussion on the role of inheritances, because they also play an important role in explaining disparities in wealth holdings among households and also raise some crucial ethical issues.

Discrimination is also another persistent problem, which seems unlikely to disappear over the next several decades, and a whole section of the book concentrates on this issue. This issue has grown in leaps and bounds in Europe as it deals with the economic problems of its immigrants and the less than ideal intergenerational mobility of these immigrants' children and grandchildren. The news in the United States is particularly distressful for African American families, who after making some progress in closing the income gap relative to white families between the early 1960s and the mid-1970s now find their relative incomes at the same level as in the early 1960s. Poverty rates also remain much higher for blacks than for whites. The role of public policy, particularly affirmative action, in explaining the changing fortunes of minorities is given considerable emphasis. This subject is especially topical today in light of recent decisions by the Supreme Court and recent attempts by members of Congress to dismantle the system.

The last part of the book treats the role of public policy on both poverty and income inequality. This tends to be the section of the course that elicits the most student interest and participation. Because of the political discourse on this subject and the emotions it raises, I have found it particularly useful to “lay out the facts.” The first chapter of this part examines the social security system and the welfare system in some detail. Most students are surprised by the fact that the resources devoted to the former are many times those spent on welfare. The second chapter describes the workings of the U.S. tax system. Here, too, there is considerable surprise that the overall tax burden has changed relatively little over time and that the tax system as a whole appears to favor neither the rich nor the poor and, as a whole, is distributionally neutral.

International comparisons also play an important role in this book. It becomes clear throughout the text that among the industrialized countries of the world the United States is really a special case both in terms of the level of inequality and the degree of increase of inequality since the 1980s. It also becomes apparent that U.S. poverty rates are exceptionally high when compared to countries at similar levels of development.

The book also extensively documents and discusses inequality and poverty trends in advanced countries (Canada, Europe, and East Asia) other than the United States and in less developed countries as well. We show that inequality is a problem in Europe as well and that the level of inequality is strikingly high in some European countries. Moreover, both income and wealth inequality have been increasing in other advanced countries. However, the “welfare states” in many European countries have considerably lowered both poverty and inequality relative to what it would have been without such extensive income transfers. Economic discrimination in Europe and various East Asian countries, particularly with regard to gender, is quite high (and worth

examining in some detail). Some developing countries are catching up with the advanced countries both in terms of per capita income and according to a broader measure of average well-being called the Human Development Index. It also appears that the world distribution of income inequality follows the inverted U-shape of the so-called Kuznets curve.

The textbook serves as a self-contained course on income distribution and poverty, with additional emphasis on issues of discrimination. It is designed mainly for undergraduates who have had a full-year economics principles course but does not require any economics beyond this level. A statistics course is helpful but not necessary, since several sections on basic statistics are also included. There are some sections of the book which contain discussion of econometric studies and more advanced mathematical treatments of inequality measurement. However, these sections (which are starred) are optional and can be skipped without interfering with the continuity of the text.

The principal audience of the textbook is likely to be undergraduate economics students. However, the book can also be used as a core text in a masters level economics course on the same topic and as a primary or secondary text in a similar course in sociology, political science, or public administration (either undergraduate or masters level). Moreover, there are sections of the book that would be suitable for a Ph.D. level course in economics, sociology, political science, or public administration. The book can also serve as a supplementary textbook in courses in labor economics, discrimination, and public policy.

On the basis of my past experience, an instructor should be able to cover Chapters 1–6, 8, and 12–16, excluding the starred sections, in a full one-semester undergraduate course. The material in these chapters is almost completely self-contained. I have also included both discussion questions and numerical problem sets at the end of most chapters. I find that the problem sets are very helpful for the students in mastering the various measures developed in the textbook (such as the Gini coefficient).

Finally, this version of the textbook benefited greatly from the excellent and thorough comments supplied by reviewers. Since they have agreed to be identified, I would like to thank them for their help:

# Contents

<i>Preface</i>	xiv
Chapter 1 Introduction: Issues and Scope of Book	1
1.1 Recent trends in living standards	1
1.1.1 Income and earnings stagnate while poverty remains unchanged	1
1.1.2 Inequality rises sharply	4
1.1.3 Middle-class debt explodes	5
1.1.4 What has happened to tax rates?	6
1.1.5 Rising profits is the key	7
1.1.6 Yet schooling has continued to rise	8
1.1.7 Some conclusions	11
1.2 Causes of rising inequality	12
1.2.1 Skill-biased technology change	12
1.2.2 The shift to services	13
1.2.3 Declining unionization	13
1.2.4 Globalization	13
1.2.5 Downsizing and outsourcing	13
1.2.6 Public policy changes	14
1.3 General description of the textbook	14
Notes	17
 <b>Part I Inequality, Poverty, and Mobility: Measurement and Trends</b>	 19
Chapter 2 Income, Earnings, and the Standard of Living	21
2.1 Introduction	21
2.2 The composition of personal income in the United States	22
2.3 The standard of living	24
2.3.1 Real versus nominal	25
2.3.2 Trends in living standards in the United States	26
2.4 Factor shares	29
2.4.1 Historical studies on factor shares*	31

2.5	International comparisons of living standards	32
2.5.1	Per capita income	32
2.5.2	The Human Development Index	33
2.6	Household production and well-being	35
2.6.1	Defining household work	37
2.6.2	The market cost approach	37
2.6.3	The opportunity cost approach	38
2.6.4	Empirical work on household production	38
2.7	Summary	39
2.8	References, bibliography, and data sources	40
2.9	Discussion questions and problem set	42
Appendix 2.1 An introduction to the National Income and Product Accounts*		44
A2.1.1	The relation to the national accounts	46
A2.1.2	The sources of personal income	47
A2.1.3	The derivation of factor shares	48
A2.1.4	Miscellaneous issues in national accounting	49
A2.1.4.1	Treatment of international trade	49
A2.1.4.2	National income at factor costs	51
A2.1.4.3	The treatment of capital gains	51
Notes		52
Chapter 3 Income Inequality: Its Measurement, Historical Trends, and International Comparisons		55
3.1	Introduction	55
3.2	A review of basic statistics	55
3.2.1	Mean, variance, and standard deviation	56
3.2.2	Distributions	56
3.2.3	Percentile ranking	59
3.3	Inequality measures	60
3.3.1	Concentration measures	61
3.3.2	Coefficient of variation	61
3.3.3	The Lorenz curve	63
3.3.4	Gini coefficient	64
3.3.5	Log variance of income*	66
3.3.6	The Theil entropy index*	67
3.3.7	Atkinson's measure*	69
3.3.8	Lorenz dominance*	70
3.4	Time trends in income inequality in the United States	70
3.5	International comparisons of inequality	74
3.5.1	Inequality comparisons among high-income countries	74
3.5.2	The Kuznets curve	80
3.5.3	The world distribution of income*	84
3.6	Summary	85
3.7	References and bibliography	86
3.8	Discussion questions and problem set	90
Notes		91

Chapter 4	Poverty: Definitions and Historical Trends	93
4.1	Introduction	93
4.2	The measurement of poverty	93
4.2.1	The official U.S. poverty standard	94
4.2.2	Absolute versus relative poverty thresholds	95
4.2.3	Subjective poverty lines	96
4.2.4	Other concepts of poverty	99
4.3	Measurement of poverty incidence	99
4.3.1	The poverty rate and the poverty gap ratio	99
4.3.2	Composite measures of poverty*	100
4.4	Poverty trends in the United States	101
4.4.1	Composition of the poor	103
4.5	Other dimensions of poverty	107
4.5.1	Poverty spells and the permanence of poverty	107
4.5.2	The underclass	108
4.5.3	International comparisons of poverty rates	109
4.6	Other issues in the measurement of poverty	112
4.6.1	Equivalence scales	113
4.6.2	Choice of a price index	114
4.6.3	The treatment of taxes	115
4.6.4	The treatment of noncash government benefits	116
4.6.5	The role of household wealth	119
4.6.6	Consumption-based measures of poverty	120
4.6.7	The accounting period	121
4.6.8	Other issues	122
4.7	Summary	123
4.8	References and bibliography	125
4.9	Discussion questions and problem set	130
	Notes	132
Chapter 5	Household Wealth	134
5.1	Introduction	134
5.2	What is household wealth?	135
5.2.1	Wealth and well-being	135
5.2.2	Marketable wealth	136
5.2.3	Other definitions of household wealth	140
5.3	Historical time-series data on household wealth and its composition	141
5.3.1	Trends in average wealth	142
5.3.2	Changes in wealth composition	143
5.3.3	Homeownership rates	146
5.4	Wealth inequality in the United States	147
5.4.1	Methods used to estimate wealth inequality	148
5.4.2	Long-term trends in household wealth inequality in the United States	150
5.4.3	Changes in wealth inequality, 1962–2004	154
5.4.4	The <i>Forbes</i> 400	166

5.5	International comparisons of household wealth distribution	167
5.5.1	Comparisons of long-term time trends	167
5.5.2	Comparisons of recent trends	168
5.6	Summary	171
5.7	References and bibliography	172
5.8	Discussion questions and problem set	176
	Notes	177
Chapter 6 Economic Mobility		180
6.1	Introduction	180
6.2	Mobility measures	180
6.2.1	Measuring intergenerational mobility	180
6.2.2	The Shorrocks measure and other measures of lifetime mobility	181
6.3	Mobility over the time	184
6.3.1	Income mobility	184
6.3.2	Earnings mobility	188
6.3.3	Other dimensions of mobility	189
6.4	Intergenerational mobility	189
6.4.1	Results for the United States	190
6.4.2	Mechanisms of transmission	194
6.4.3	International comparisons	195
6.5	Wealth mobility	197
6.6	Summary	198
6.7	References and bibliography	200
	Notes	204
<b>Part II Explanations of Inequality and Poverty</b>		<b>205</b>
Chapter 7 The Labor Force, Employment, and Unemployment		207
7.1	Introduction	207
7.2	Basic concepts of the labor force, employment, and unemployment	208
7.2.1	Employment	208
7.2.2	Unemployment	209
7.2.3	The labor force	209
7.2.4	Estimating employment statistics	209
7.3	Labor force participation rates	210
7.3.1	LFPR by gender, race, and age	211
7.3.2	Two-earner households	216
7.3.3	Educational attainment of the labor force	217
7.4	The industrial and occupational composition of employment	219
7.5	Measures of unemployment and historical trends	221
7.6	The incidence of unemployment	226
7.6.1	Jobless rates by demographic characteristic	226
7.6.2	Unemployment by industry, occupation, and region	229
7.7	Types of unemployment	232
7.7.1	Frictional unemployment	232
7.7.2	Seasonal unemployment	233

7.7.3	Structural unemployment	234
7.7.4	Deficient demand (Keynesian) unemployment	235
7.7.5	The debate over the causes of unemployment	236
7.8	Summary	238
7.9	References and bibliography	240
7.10	Discussion questions	243
	Notes	243
Chapter 8 The Role of Education and Skills		246
8.1	Introduction	246
8.2	The human capital model	247
8.2.1	The rate of return to human capital	248
8.2.2	On-the-job training	251
8.2.3	Additional implications of the human capital model	254
8.3	Earnings, schooling, and experience	258
8.3.1	Rates of return to schooling	260
8.3.2	Lifetime earnings	267
8.4	The schooling–earnings function*	269
8.4.1	The extended earnings function*	272
8.5	Ability and earnings	273
8.5.1	Estimates of the ability effect*	275
8.5.2	The nature vs. nurture controversy	276
8.6	Productivity and earnings	279
8.6.1	Experience, productivity, and earnings	279
8.6.2	Other interpretations of the relation between schooling and earnings	281
8.7	Earnings inequality and human capital*	286
8.8	Summary and concluding remarks	288
8.9	References and bibliography	291
8.10	Discussion questions and problem set	296
	Notes	297
Chapter 9 Unions, Dual Labor Markets, and Structural Models of Earnings		301
9.1	Introduction	301
9.2	The role of labor unions	303
9.2.1	A brief history of trade unionism in the United States	303
9.2.2	Trends in union membership	305
9.2.3	The economic role of labor unions	310
9.2.4	The effect of unions on wages: The evidence	315
9.3	Segmented labor markets	319
9.3.1	Internal labor markets	319
9.3.2	The dual labor market model	322
9.3.3	An evaluation of labor market segmentation	325
9.4	Industrial composition and earnings inequality*	326
9.4.1	State and regional differences in inequality	326
9.4.2	Regional differences in income levels	328
9.4.3	Industrial composition and rising earnings inequality of the 1980s	329

9.5	Industry wage differentials*	331
9.5.1	Explanations of inter-industry wage differences	331
9.5.2	Recent trends and efficiency wage theory	336
9.6	Occupational wage differentials	339
9.6.1	Historical studies	339
9.6.2	Trends in the United States in the twentieth century	340
9.6.3	Rising skewness at the top	342
9.7	Summary and concluding remarks	343
9.8	References and bibliography	346
9.9	Discussion questions	352
	Notes	353
Chapter 10 The Role of Savings and Intergenerational Transfers in Explaining Wealth Inequality		355
10.1	Introduction	355
10.2	The basic lifecycle model	356
10.2.1	Age–wealth profiles	357
10.2.2	Longitudinal analyses*	359
10.2.3	Simulation and regression analysis*	361
10.3	Extensions of the lifecycle model	363
10.3.1	The role of uncertainty about death and lifetime annuities	364
10.3.2	The role of pension and social security wealth	364
10.3.3	The bequest motive	366
10.3.4	Precautionary savings and liquidity constraints	371
10.4	Intergenerational equity	372
10.4.1	Social security annuity and transfer wealth	372
10.4.2	Private intergenerational transfers	375
10.4.3	Generational accounting	376
10.5	Summary and overall assessment	377
10.6	References and bibliography	379
10.7	Discussion questions	385
	Notes	385
Chapter 11 Sources of Rising Earnings Inequality*		386
11.1	Introduction	386
11.2	Skill-biased technological change	387
11.3	The IT “revolution”	389
11.4	Growing international trade and immigration	390
11.5	The shift to services	393
11.6	Institutional factors	394
11.7	Outsourcing and downsizing	395
11.8	Changes in the distribution of schooling and ability	395
11.9	Time trends in key explanatory variables	396
11.10	Econometric results	405
11.11	Summary and concluding remarks	408
11.12	References and bibliography	410
Appendix 11.1 Data sources and methods		416
	Notes	417

<b>Part III Discrimination</b>	419
Chapter 12 Discrimination: Meaning, Measurement, and Theory	421
12.1 Introduction	421
12.2 The meaning of discrimination	423
12.2.1 The Blinder–Oaxaca decomposition*	424
12.2.2 Pre-labor market discrimination	425
12.3 Theories of discrimination: an overview	429
12.4 Taste for discrimination	430
12.5 Statistical discrimination	434
12.6 The racial stigma model	436
12.7 The Marxian model	437
12.8 Overcrowding model of occupational segregation	438
12.9 Summary	440
12.10 References and bibliography	441
Notes	443
Chapter 13 Racial Discrimination: Progress and Reversal for Black Americans	445
13.1 Introduction	445
13.2 Trends and status report on racial inequality	446
13.2.1 The earnings gap: have African American workers made gains on whites?	446
13.2.2 Labor force participation and unemployment	449
13.2.3 Family income, poverty, and wealth	453
13.2.4 Hispanics	457
13.3 Migration from the South	460
13.4 Progress in educational attainment	461
13.4.1 The role of educational gains on the earnings gap*	463
13.4.2 Quality of schooling*	464
13.4.3 Returns to schooling for blacks and whites	465
13.4.4 Hispanic Americans	468
13.5 Changes in family structure among black Americans	469
13.6 Public policy and discrimination	471
13.6.1 Public policy programs	472
13.6.2 The effectiveness of the anti-discrimination programs	474
13.7 Summary and conclusion	478
13.8 References and bibliography	480
13.9 Discussion questions and problem set	485
Notes	486
Chapter 14 The Gender–Wage Gap and Occupational Segregation	488
14.1 Introduction	488
14.2 The wage gap and labor force participation trends	488
14.2.1 Time trends	490
14.2.2 Labor force participation patterns	491
14.2.3 Explanations of the rising LFPR of women*	492
14.3 Explanations of the wage gap	494
14.3.1 Human capital differences	494
14.3.2 Occupational segregation	503

14.4	The role of public policy	509
14.4.1	The effectiveness of the anti-discrimination programs	509
14.4.2	Comparable worth	511
14.5	Other issues*	513
14.5.1	Effects of wives' earnings on family income inequality	513
14.5.2	The feminization of poverty	514
14.5.3	International comparisons	516
14.6	Summary	517
14.7	References and bibliography	518
14.8	Discussion questions and problem set	525
	Notes	525

## **Part IV The Role of Public Policy on Poverty and Inequality** 527

### **Chapter 15 Public Policy and Poverty Alleviation** 529

15.1	Introduction	529
15.2	A brief history of income maintenance programs	529
15.2.1	Early developments	530
15.2.2	The New Deal	530
15.2.3	Post-war developments	532
15.2.4	Housing assistance	533
15.2.5	Public expenditures on major federal programs	534
15.3	Unemployment insurance (UI)	536
15.3.1	A brief description of the UI system	536
15.3.2	Time trends in UI benefits	538
15.3.3	Incentive effects of the UI system	540
15.4	The social security system	541
15.4.1	Determination of the social security benefit	542
15.4.2	Incentive effects on labor supply	546
15.5	The welfare system	546
15.5.1	The workings of AFDC and TANF	547
15.5.2	Incentive effects of the welfare system	550
15.6	Work programs	554
15.6.1	Effectiveness of the work programs	555
15.7	The minimum wage	556
15.8	Conclusion and overall assessment of government programs	559
15.8.1	Effects on poverty	560
15.8.2	Proposals for reform	562
15.9	References and bibliography	564
15.10	Discussion questions and problem set	570
	Notes	571

### **Chapter 16 The Redistributive Effects of Public Policy** 574

16.1	Introduction	574
16.2	Equality as a social goal	574
16.2.1	Arguments in favor of promoting equality	574
16.2.2	Arguments against promoting equality	577

16.3	The structure of tax systems	579
16.3.1	Proportional, progressive, and regressive tax structures	579
16.3.2	Inequality measures and the tax system	583
16.3.3	Vertical versus horizontal equity	586
16.4	Distributional consequences of the U.S. tax system	587
16.4.1	Tax schedules for the personal income tax	587
16.4.2	Effective tax rates for the personal income tax	591
16.4.3	The payroll tax	593
16.4.4	Other federal taxes	594
16.4.5	State and local government taxes	595
16.4.6	The overall tax bite?	596
16.4.7	International comparisons of taxation	598
16.4.8	The overall effective tax rate structure in the United States	600
16.5	The negative income tax and the EITC	608
16.6	The distributional effects of government expenditures	611
16.7	Summary and conclusion	616
16.8	References and bibliography	619
16.9	Discussion questions and problem set	622
	Notes	623
	<i>Index</i>	627

# Chapter 1

## Introduction: Issues and Scope of Book

### 1.1 RECENT TRENDS IN LIVING STANDARDS

In this section, the author presents his *own* views about the development of the U.S. economy over the last 50 years. Please note that other researchers may differ in their opinions about these recent developments in U.S. living standards. A number of new terms are also introduced here. These will be formally defined in the ensuing five chapters. However, this section may serve as a way of motivating readers to delve more deeply into the subject matter of this book.

#### 1.1.1 Income and earnings stagnate while poverty remains unchanged

The early years of the twenty-first century have witnessed a struggling middle class despite robust growth in the overall U.S. economy. During the first part of the George W. Bush administration, from 2001 to 2005, the economy (GDP in real dollars) expanded by 14 percent despite a brief recession in 2001, and labor productivity (real GDP divided by full-time equivalent employees) grew at an annual pace of 2.2 percent. Both figures are close to their post-World War II highs for similar periods.

Despite the booming economy, the most common metric used to assess living standards, real median family income (the income of the average family, found in the middle of the distribution when families are ranked from lowest to highest in terms of income), actually *fell by 3 percent*.<sup>1</sup> From 1973 to 2005 its total percentage gain amounted to 6 percent. In contrast, between 1947 and 1973, median family income almost exactly doubled (see Figure 1.1).

*Mean* (or *average*) family income likewise doubled between 1947 and 1973 and then increased by 21 percent from 1973 to 2005. This is less than the increase over the preceding quarter-century but greater than the rise in median family income. The disparity between the two reflects rising inequality since the early 1970s (see below).

Another troubling problem is poverty. Between 1959 and 1973, there was great success in reducing poverty in the United States, with the overall poverty rate declining by more than half, from 22.4 to 11.1 percent (see Figure 1.2). After that, the poverty rate has stubbornly refused to go any lower. After 1973, it trended upward to 15.1 percent in 1993, then fell back to 11.3 percent in 2000, only slight above its low point, but then rose again to 12.6 percent in 2005.

Another indicator of the well-being of lower income families is the share of total income received by the bottom quintile group (20 percent) of families (see Figure 1.3). Their share rose from 5 percent in 1947 to 5.7 percent in 1974, its high point. Since then it fell off rather sharply to
