To Our Parents

PREFACE

*“Learning without thought is labor lost;
thought without learning is perilous.”*

Confucius

The purpose of this book is to provide a basic learning resource for the study of quantitative methods. To this end we have incorporated a number of unique features designed to make the book interesting, readable, and useful:

Thorough explanations that appeal to intuition rather than use mathematical proof

Behavioral learning objectives for each chapter

In-chapter practice exercises with complete solutions

Case studies to expand learning horizons

Chapter sections on “real world” experiences that illustrate the implementation of quantitative methods

Many end-of-chapter exercises

Part I, Fundamentals of Quantitative Methods, sets the stage with discussions of quantitative methods, models, and data. It reflects our philosophy that quantitative methods can *assist* managerial decision making but cannot replace experienced judgment.

Part II, Making Rational Decisions, looks at elements of statistical decision theory. A treatment of the payoff matrix and decision trees is provided. Game Theory is also included here for its conceptual contributions to decision making.

Part III, Planning Business Activities, includes explanations of the methods most commonly used to aid managerial planning, together with examples of their application. Topics include forecasting, linear programming, Markov analysis, and project planning.

Part IV, Balancing Cost and Service, focuses on two common decision areas: inventory control and waiting lines. In these areas we have tried to develop the reader's intuitive understanding of the decisions to be made. This is important if quantitative methods are to be truly effective.

Part V, Solving Problems by Modeling System Behavior, focuses on the important topic of simulation. We close with *Part VI, Maintaining a Managerial Perspective*, a title which expresses one of our goals throughout the book.

The level of mathematics has been held to a minimum throughout. Neither calculus nor matrix algebra is used. Algebra plus an elementary knowledge of probability and statistics are all that will be needed.

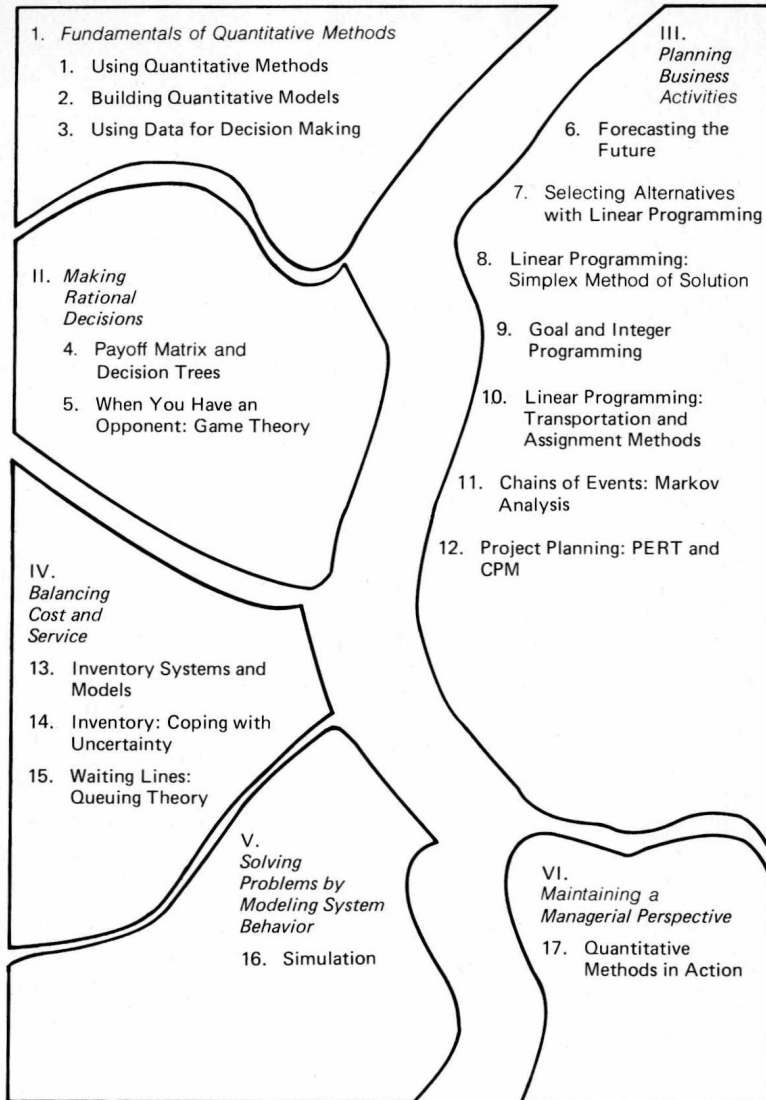

There is sufficient material in the book for a one-semester or two-quarter course at either the undergraduate or graduate level. Selective material could be omitted if only a one-quarter course is desired. The order in which chapters are covered can be greatly varied since many of the chapters are independent of the others.

We have been fortunate in receiving important help from many people. Our thanks go, especially, to Samuel Newman for his help in planning the book. Also to Eugene T. Byrne, Janet C. Goulet, David C. Murphy, and Diane R. Walker for their help in review; and to Paul R. Merry who made many excellent comments and helpful criticisms. Last but not least, our thanks go to Susie Findell, Cynthia Downing, Martha Simkins, Martha Tyler, and Nicky O'Hair for their help in typing the manuscript. Of course, the authors are solely responsible for errors in content.

SOLVING THE QUANTITATIVE METHODS PUZZLE

CONTENTS

Preface xv

PART I FUNDAMENTALS OF QUANTITATIVE METHODS

1 USING QUANTITATIVE METHODS 2

Learning Objectives	3
The Rational Decision-Making Process	4
How People Actually Solve Problems	6
The Role of Quantitative Methods	7
Organizational Use of Quantitative Methods	8
Rounding Off: Precision versus Accuracy	9
Keeping Magnitude in Perspective	11
Calculators and Computers	11
A Short History of Quantitative Methods	12
Summary	13
Assignments	13
References	14

2 BUILDING QUANTITATIVE MODELS 15

Learning Objectives	16
Characteristics of Business Systems	17
Models	18
Dimensionality of Models	20
Decision-Making Models	21
Decision Making under Certainty	21

Decision Making under Risk	22
Decision Making under Uncertainty	23
Decision Making under Conflict	24
Summary	25
Assignments	25
References	26

3 USING DATA FOR DECISION MAKING 27

Learning Objectives	28
What Is Data?	29
Types of Data	29
Data Requirements at Different Organizational Levels	30
Sources of Data	31
Data as Input to Models	32
Contributions from the Accountants	32
Accounting-Type Relationships	33
Linear Break-Even Analysis	36
Practice Exercise(3-1)	40
Nonlinear Break-Even Analysis	40
Practice Exercise (3-2)	42
Break-Even Analysis with Multiple Products	42
Practice Exercise (3-3)	44
Make-versus-Buy Decisions	45
Practice Exercise (3-4)	46
Excess Plant Capacity	47
Dumping the Product	48
Summary	48
Assignments	49
References	53

PART II MAKING RATIONAL DECISIONS

4 PAYOFF MATRIX AND DECISION TREES 56

Learning Objectives	58
Sources of Probabilities	58
Practice Exercise (4-1)	61
Expected Value	61
Practice Exercise (4-2)	63
The Payoff Matrix	63

Practice Exercise (4-3)	67
Decision Trees	67
Practice Exercise (4-4)	75
A Caution about Using Expected Monetary Value	75
Real-World Experiences	77
Summary	79
Assignments	80
Case Study: Key West or Hawaii	85
References	86

5 WHEN YOU HAVE AN OPPONENT: GAME THEORY 87

Learning Objectives	88
The Payoff Matrix for a Game	89
Pure Strategy Games	90
Practice Exercise (5-1)	92
Mixed Strategy Games	93
Practice Exercise (5-2)	97
Special Cases	97
Games with More than Two Persons	98
Nonzero Sum Games	99
Practice Exercise (5-3)	100
Real-World Experiences	101
Summary	102
Assignments	102
Case Study: Faculty Unions	107
References	109

PART III PLANNING BUSINESS ACTIVITIES

6 FORECASTING THE FUTURE 112

Learning Objectives	113
Categorizing Forecasting Methods	114
Selecting a Forecasting Method	115
Time-Series Methods	115
Practice Exercise (6-1)	120
Practice Exercise (6-2)	122
Practice Exercise (6-3)	125
Practice Exercise (6-4)	130
Causal Methods	130

Practice Exercise (6-5)	135
Qualitative Methods	137
Real-World Experiences	140
Summary	143
Assignments	144
Case Study: United Buyers Service	149
References	151

7 SELECTING ALTERNATIVES WITH LINEAR PROGRAMMING 152

Learning Objectives	154
Formulating the Constraints	154
The Objective Function	156
Three Examples	156
Practice Exercise (7-1)	161
Solving LP Problems	161
The Graphical Method	162
Practice Exercise (7-2)	170
Using the Graphical Method for Minimization	170
Practice Exercise (7-3)	174
Multiple Solutions	174
No Solution	174
Integral Solutions	175
Limitations of the Graphical Method	175
Other Methods of Solution	176
Duality and Shadow Prices	176
Assumptions and Limitations of LP	179
Applications of LP	180
Real-World Experiences	185
Summary	187
Assignments	187
Case Study: Madison Wire Company	192
References	193

8 LINEAR PROGRAMMING: SIMPLEX METHOD OF SOLUTION 194

Learning Objectives	196
Getting Ready: Augmenting Constraints	196
Overview of the Simplex Method	198
Setting Up the Initial Simplex Table	200
Practice Exercise (8-1)	202

Simplex Method (Maximizing)	203
Practice Exercise (8-2)	213
Minimizing with Simplex	213
Practice Exercise (8-3)	215
Dealing with Special Cases	215
Shadow Prices and the Dual Solution	218
Sensitivity Analysis	222
Computer Solution	228
Summary	229
Assignments	229
Case Study: Bithlo Electric	232
References	233

9 GOAL AND INTEGER PROGRAMMING 234

Learning Objectives	236
Goal Programming	236
Practice Exercise (9-1)	240
Practice Exercise (9-2)	243
Simplex Method for Goal Programming	243
Practice Exercise (9-3)	247
Applications of Goal Programming	248
Integer Programming	256
Branch and Bound	257
Practice Exercise (9-4)	262
Branch and Bound Applied to Assignment Problems	263
Practice Exercise (9-5)	266
Real-World Experiences	267
Summary	268
Assignments	268
Case Study: John's Investment Model	273
References	275

10 LINEAR PROGRAMMING: TRANSPORTATION AND ASSIGNMENT METHODS 276

Learning Objectives	279
Characteristics of a Transportation Problem	279
The Transportation Method of Solution	281
Practice Exercise (10-1)	284
Practice Exercise (10-2)	291
Practice Exercise (10-3)	292
Practice Exercise (10-4)	296

Practice Exercise (10-5)	298
Other Types of Transportation Problems	303
Characteristics of Assignment Problems	306
The Assignment Method of Solution	306
Practice Exercise (10-6)	312
Real-World Experiences	313
Summary	314
Assignments	315
Case Study: You-Drive Truck Rental Company	325
References	326

11 CHAINS OF EVENTS: MARKOV ANALYSIS 327

Learning Objectives	328
Describing a Markov Chain	328
Calculating Transient Probabilities	330
Practice Exercise (11-1)	333
Calculating Steady-State Probabilities	333
Practice Exercise (11-2)	339
Practice Exercise (11-3)	340
Special Cases	340
Practice Exercise (11-4)	346
Management Application: Personnel Planning	346
Real-World Experiences	348
Summary	349
Assignments	349
Case Study: Archie's Quarks	353
References	353

12 PROJECT PLANNING: PERT AND CPM 355

Learning Objectives	356
Gantt Charts	357
Drawing Project Networks	358
Finding the Critical Path	362
Practice Exercise (12-1)	366
Practice Exercise (12-2)	370
Managerial Uses of Network Diagrams	370
PERT: Using Probabilistic Networks	371
Practice Exercise (12-3)	375
Practice Exercise (12-4)	376
CPM: Making Time/Cost Trade-offs	377

Practice Exercise (12-5)	381
Practice Exercise (12-6)	382
Need for Computers	382
Other Project Techniques	383
Real-World Experiences	383
Summary	385
Assignments	385
Case Study: Xylon Electronics	394
References	396

PART IV BALANCING COST AND SERVICE

13 INVENTORY SYSTEMS AND MODELS 398

Learning Objectives	400
Classifying Inventory Systems	400
Classifying Inventory Models	401
Inventory Costs	401
EOQ: A Fixed-Order Quantity Model	404
Practice Exercise (13-1)	409
Three Special Cases	410
Practice Exercise (13-2, 13-3, and 13-4)	416
A Fixed-Order Period Model	416
Practice Exercise (13-5)	419
Summary	419
Assignments	420
References	425

14 INVENTORY: COPING WITH UNCERTAINTY 426

Learning Objectives	427
Two Fixed-Order Quantity Models	427
Practice Exercise (14-1)	432
Practice Exercise (14-2)	435
A Fixed-Order Period Model	436
Practice Exercise (14-3)	440
Selecting an Inventory Model	440
Multiple Items	443
Other Inventory Systems	446
Real-World Experiences	447
Summary	448

Assignments	449
Case Study: Wonderworld	453
References	455

15 WAITING LINES: QUEUING THEORY 456

Learning Objectives	458
The Costs of Queuing Systems	458
Typical Structures	460
A Single-Line-Single-Server Model	462
Practice Exercise (15-1)	466
System Evaluation When Waiting Cost Is Known	466
System Evaluation with Unknown Waiting Cost	468
A Single Server Model with Constant Service Time	471
Practice Exercise (15-2)	472
Comparing Exponential and Constant Service Times	472
A Model with Multiple Servers	473
Practice Exercise (15-3)	475
Comparing One Fast Server with Two Slow Servers	475
Poisson and Exponential Distributions	476
Solution by Simulation	478
Real-World Experiences	479
Summary	480
Assignments	480
Case Study: Drive-in Tellers	483
References	484

PART V SOLVING PROBLEMS BY MODELING SYSTEM BEHAVIOR

16 SIMULATION 488

Learning Objectives	490
A Simulation Example: Profit Analysis	490
The Simulation Procedure	494
Generating Values of a Random Variable	496
Monte Carlo Process	496
Practice Exercise (16-1)	501
Practice Exercise (16-2)	501
Building a Model	502
Model Reliability and Validity	503

Introduction to Some Examples	503
A Queuing System Example	503
An Inventory Example	507
A Simulation of Human Decision Making	512
An Example of a Car Rental Agency	515
Real-World Experiences	518
Summary	520
Assignments	521
Case Study: But, Will It Make a Profit?	528
References	528

PART VI MAINTAINING A MANAGERIAL PERSPECTIVE

17 QUANTITATIVE METHODS IN ACTION 532

Learning Objectives	533
When to Use Quantitative Methods	534
Choosing an Appropriate Quantitative Method	535
The Model Development Process	536
Barriers to Using Quantitative Methods	539
Computer-Based Information Systems	542
The Impact of Quantitative Methods	547
The Future of Quantitative Methods	549
Summary	549
Assignments	550
Case Study: National Tool Company	552
References	554

APPENDIXES

A Review of Probability and Statistics	555
B Area under the Standard Normal Curve	570
C Table of Random Numbers	572
