Preface

The Shelly Cashman Series® Internet books reinforce the fact that you made the right choice when you use a Shelly Cashman Series book. Earlier Shelly Cashman Series Internet books were used by more schools and more students than any other series in textbook publishing. Yet, the Shelly Cashman Series team wanted to produce an even better book for HTML, so the step-by-step pedagogy was refined to include larger screens (800 x 600) to present material in an even easier-to-understand format. Features such as OtherWays and More Abouts, with links to HTML Web sites, enhance the book to give students an in-depth knowledge of HTML. Each project opens with a fascinating perspective of the subject covered in the project. Completely redesigned student assignments include the unique Cases and Places. This book provides the finest educational experience for students learning about how to create Web pages using HTML.

The World Wide Web

In the several years since its birth, the World Wide Web, or Web for short, has grown beyond all expectations. During this short period of time, the Web has increased from a limited number of networked computers to more than twenty million computers offering millions of Web pages on any topic you can imagine. Schools, businesses, and the computing industry all are taking advantage of this new way of delivering information. Web pages do not just happen. Someone must create and manage them. This book shows you how to create Web pages using HTML.

Objectives of This Textbook

HTML: Introductory Concepts and Techniques is intended for use in combination with other books in an introductory course on creating Web pages. This book also is suitable for use in a one-credit hour course or a continuing education course. Specific objectives of this book are as follows:

- To expose students to creating Web pages
- To teach students how to use HTML
- To expose students to common Web page formats and functions
- To encourage curiosity and independent exploration of World Wide Web resources
- To develop an exercise-oriented approach that allows students to learn by example
- To encourage independent study and help those who are learning how to create Web pages in a distance education environment

2. Click Close on File menu

More About

Navigation

Studies have been conducted to assess the best location on a Web page to place navigation bars and lists. The research results are varied, with indications that navigation options on the top, side, and bottom of a Web page show slight differences in visitor usability. The most important aspect of Web page navigation is to make the options easy enough to locate so visitors do not have to search for them.

Organization of This Textbook

HTML: Introductory Concepts and Techniques is comprised of three projects that introduce students to creating Web pages. Neither World Wide Web nor Internet experience is necessary. Each project begins with a statement of Objectives. The topics in the project are presented in a step-by-step, screen-by-screen manner.

Each project ends with a Project Summary and a section titled What You Should Know. Questions and exercises are presented at the end of each project. Exercises include Test Your Knowledge, Use Help, Apply Your Knowledge, In the Lab, and Cases and Places. The projects are organized as follows:

Project 1 - Creating and Editing a Web Page In Project 1, students are introduced to World Wide Web terminology, basic HTML tags, and the various parts of a Web page. Topics include starting and quitting Notepad and a browser; entering headings and text into an HTML file; creating a bulleted list with HTML; adding background color and a horizontal rule; saving the HTML file and viewing it in the browser; printing the HTML file and the Web page; and Web page design.

Project 2 - Creating a Web Site with Links In Project 2, students are introduced to linking terms and definitions. Topics include adding an e-mail link; linking to another page on the same Web site; linking to another Web site; setting link targets within a page; linking to targets; types of image files; alternative text for images; defining image size; wrapping text around an image; and inserting images onto Web pages.

Project 3 - Creating Tables in a Web Site In Project 3, students learn how to create tables using HTML tags. First, students assess table needs and then plan the table. Topics include table definitions and terms; table uses; creating borderless tables; inserting images into tables; vertical and horizontal alignment within a table; adding color to a cell; adding links to another page; adding an e-mail link; using the ROWSPAN and COLSPAN attributes; adding captions; and spacing within and between cells.

End-of-Project Student Activities

A notable strength of the Shelly Cashman Series Internet books is the extensive student activities at the end of each project. Well-structured student activities can make the difference between students merely participating in a class and students retaining the information they learn. These activities include all of the following sections.

- **What You Should Know** A listing of the tasks completed within a project together with the pages where the step-by-step, screen-by-screen explanations appear. This section provides a perfect study review for students.
- **Test Your Knowledge** Four or five pencil-and-paper activities designed to determine students' understanding of the material in the project. Included are true/false questions, multiple-choice questions, and two short-answer exercises.
- **Use Help** Any user of HTML must know how to use Help. Therefore, this book contains two Help exercises per project. These exercises alone distinguish the Shelly Cashman Series from any other set of instructional materials.
- **Apply Your Knowledge** A substantive exercise intended to be completed in a few minutes that provides practice with project skills.

- **In the Lab** Several assignments per project that require students to apply the knowledge gained in the project to solve problems.
- **Cases and Places** Seven unique case studies allow students to apply their knowledge to real-world situations.

Shelly Cashman Series Teaching Tools

A comprehensive set of Teaching Tools accompanies this textbook in the form of a CD-ROM. The CD-ROM includes an electronic Instructor's Manual and teaching and testing aids. The CD-ROM (ISBN 0-7895-5622-7) is available through your Course Technology representative or by calling one of the following telephone numbers: Colleges and Universities, 1-800-648-7450; High Schools, 1-800-824-5179; and Career Colleges, 1-800-477-3692. The contents of the CD-ROM are listed below.

- **Instructor's Manual** The Instructor's Manual is made up of Microsoft Word files that include lecture notes, solutions to laboratory assignments, and a large test bank. The files allow you to modify the lecture notes or generate quizzes and exams from the test bank using your own word processor. The Instructor's Manual includes the following for each project: project objectives; project overview; detailed lesson plans with page number references; teacher notes and activities; answers to the end-of-project exercises; test bank of 110 questions (50 true/false, 25 multiple-choice, and 35 fill-in-the blanks); transparency references; and selected transparencies. The transparencies are available on the Figures in the Book described below. The test bank questions are numbered the same as in Course Test Manager. Thus, you can print a copy of the project and use the printed test bank to select your questions in Course Test Manager.
- **Figures in the Book** Illustrations for every figure in the textbook are available. Use this ancillary to create a slide show from the illustrations for lecture or to print transparencies for use in lecture with an overhead projector.
- **Course Test Manager** Course Test Manager is a powerful testing and assessment package that enables instructors to create and print tests from the large test bank. Instructors with access to a networked computer lab (LAN) can administer, grade, and track tests online. Students also can take online practice tests, which generate customized study guides that indicate where in the textbook students can find more information for each question.
- **Lecture Success System** The Lecture Success System is a set of files that allows you to explain and illustrate the step-by-step, screen-by-screen development of a project in the textbook. The Lecture Success System requires that you have a copy of Notepad, a browser, a personal computer, and a projection device.
- **Instructor's Lab Solutions** Solutions and required files for all the Apply Your Knowledge and In the Lab assignments at the end of each project and the projects themselves are available.
- **Student Data Files** All the files that are required by students to complete the Apply Your Knowledge exercises are included. See the discussion regarding the HTML Data Disk in the next section.
- **Interactive Labs** Eighteen hands-on interactive labs that take students from ten to fifteen minutes to step through help solidify and reinforce computer concepts. Student assessment requires students to answer questions about the contents of the interactive labs.

HTML Data Disk

The HTML Data Disk is required for some of the projects and exercises. Students can obtain a copy of the HTML Data Disk by following the instructions on the inside back cover of this book. The Shelly Cashman Series Teaching Tools CD-ROM contains a copy of the files that comprise the HTML Data Disk.

Shelly Cashman Online

Shelly Cashman Online is a World Wide Web service available to instructors and students of computer education. Visit Shelly Cashman Online at www.scservices.com. Shelly Cashman Online is divided into four areas:

- **Series Information** Information on the Shelly Cashman Series products.
- **Teaching Resources** Designed for instructors teaching from and using Shelly Cashman Series textbooks and software. This area includes password-protected instructor materials that can be downloaded, course outlines, teaching and tips, and much more.
- **Student Center** Dedicated to students learning about computers with Shelly Cashman Series textbooks and software. This area includes cool links, data that can be downloaded, and much more.
- **Community** Opportunities to discuss your course and your ideas with instructors in your field and with the Shelly Cashman Series team.

Acknowledgments

The Shelly Cashman Series would not be the leading computer education series without the contributions of outstanding publishing professionals. First, and foremost, among them is Becky Herrington, director of production and designer. She is the heart and soul of the Shelly Cashman Series, and it is only through her leadership, dedication, and tireless efforts that superior products are made possible.

Under Becky's direction, the following individuals made significant contributions to these books: Doug Cowley, production manager; Ginny Harvey, series specialist and developmental editor; Ken Russo, graphic designer and Web developer; Mike Bodnar, Stephanie Nance, Dave Bonnewitz, Mark Norton, and Ellana Russo, graphic artists; Jeanne Black, Quark expert; Nancy Lamm, copyeditor; Cherilyn King, proofreader; Adrienne Delismon, technical reviewer; Marlo Mitchem, production/administrative assistant; Cristina Haley, indexer; Sarah Evertson of Image Quest, photo researcher; and Susan Sebok contributing writer.

Special thanks go to Jim Quasney, our dedicated series editor; Lisa Strite, senior editor; Lora Wade, associate product manager; Tonia Grafakos and Meagan Walsh, editorial assistants; and Kathryn Cronin, product marketing manager. Special mention must go to Becky Herrington for the outstanding book design; Mike Bodnar for the logo designs, and Stephanie Nance for the cover design and illustrations.

HTML

Creating and Editing a Web Page

OBJECTIVES

You will have mastered the material in this project when you can:

- Describe the Internet and its associated key terms
- Describe the World Wide Web and its associated key terms
- Start Notepad
- Describe the Notepad window
- Enter the HTML, HEAD, TITLE, and BODY tags
- Enter a paragraph of text, a bulleted list, and HTML tags
- Save an HTML file
- Change the background color of a Web page
- Center a heading
- Start Your Browser
- View the HTML file in Your Browser
- Print an HTML file from Notepad
- Print a Web page from Your Browser
- Access information about Web page design via the Internet
- Quit Notepad
- Quit Your Browser

Online Shopping Is Gaining Customers

Check out the new mall opening in your neighborhood. It is filled with thousands of stores, open 24 hours every day, and loaded with the season's newest merchandise. Best of all, you can head there without getting in your car. Just boot up your computer, connect to the Internet, and shop to your heart's content.

Merchants have discovered Web surfers across the world love to shop online. Although the actual number of consumers and their spending habits are difficult to track, one thing is for certain: e-commerce is flourishing. Yahoo!, the largest subject-directory search tool on the Internet, reports more than 1,000 merchants sign up on its service each day. In 1997, one-third of Internet users shopped online and bought \$4.3 billion of services and

products, most commonly apparel, books, and music. By 2002, one-half of Internet users are predicted to buy products online and to spend an estimated \$54 billion. Programmers developed the first cybershop sites, but these pioneers had

little insight of how shoppers actually would use the pages. Their goal was to get the files to load and work properly, not necessarily to attract visitors with an attractive design and meaningful content. In the past few years, however, researchers have become involved by analyzing the shoppers and scrutinizing their shopping behaviors.

Typical cybershoppers are middle-aged, male, wealthy, married, and educated. They go to movies, concerts, plays, and museums, do charity or volunteer work, and garden. Above all, they want mastery of the Web sites and instant fulfillment. They want to browse, read product descriptions, and comparison shop with ease. When cybershopping, they look at only four of the hundreds of thousands of cybershop Web pages. When a page loads, they look at the material and make a speedy decision to continue or to click the Back button. When they are ready to buy, they want to purchase the product quickly and pay securely.

As a result of this shopping behavior, marketing professionals often work actively with HTML

(hypertext markup language) programmers to create effective Web pages. They realize that a merchant's Web site should contain tables, frames, and colors to lead surfers in a focused direction to the items they want to buy. The pages ask visitors to get involved by clicking various options. They contain Help, a frequently asked questions (FAQ) section, a telephone number, an e-mail address, and a physical company address.

In this textbook you will learn to create dazzling Web pages that contain the same components as those you see in the cybermalls. In Project 1, you will use HTML tags and design a Web page with a bulleted list and background color. In later projects, you will add tables and links to other Web sites. As you work through these projects and exercises, consider how visitors would use your Web pages. With practice and patience, you will develop pages that even a power shopper would love.

HTML

Creating and Editing a Web Page

CASE PERSPECTIVE

Jared Smith is the owner of Chiaravalle Pizza, a local pizza place where you work when you are not attending classes. Recently, Mr. Smith called you into his office to ask some questions about the Internet and World Wide Web (also called the Web). He had been reading about the Web lately and wondered if Chiaravalle Pizza should develop its own Web site for advertising.

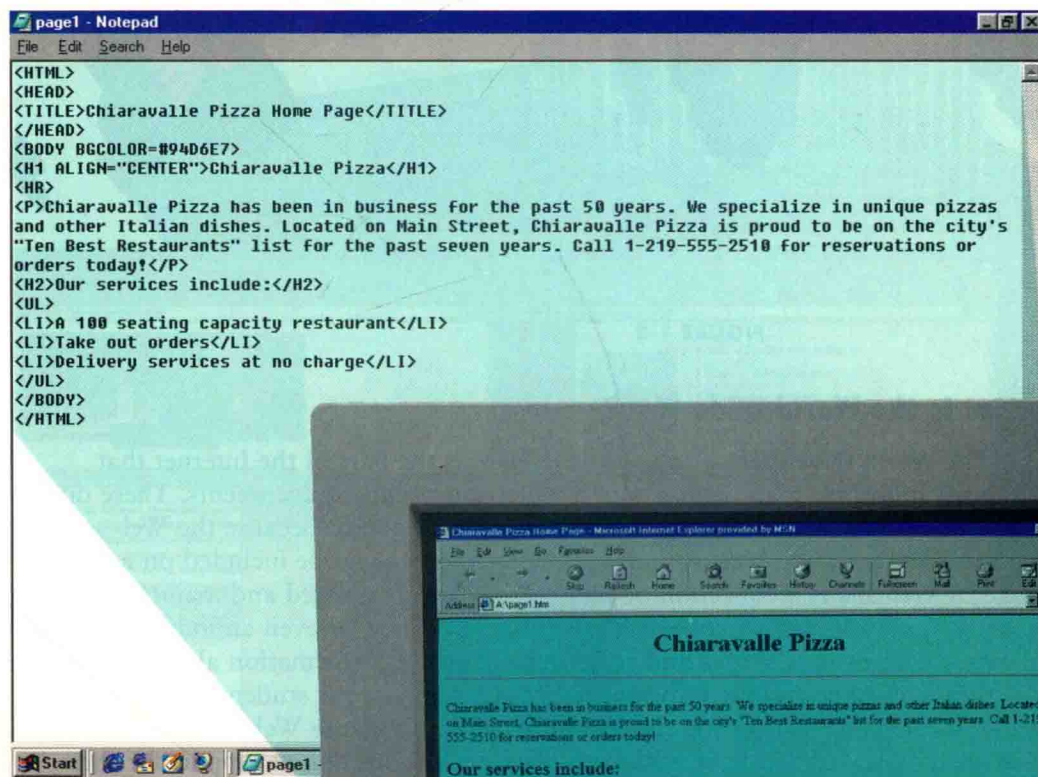

With this in mind, you have decided to design and develop a Web page that advertises Chiaravalle Pizza's variety of traditional and specialty pizzas (Figure 1-1a). To develop this Web page, you will use hypertext markup language (HTML), as shown in Figure 1-1b. You also have decided to make the Web pages more appealing by using various text sizes and formats, adding color and an image in the form of a horizontal rule. Once you have completed this Web page, you will show it to Mr. Smith to get his feedback on future development.

Introduction

Quick access to information is vitally important. Each day, you make decisions in all areas of your life. Today, computers and networks have become the tools people use to gather, analyze, and use information to make informed decisions and to communicate with others around the world. The world's largest network is the Internet — a worldwide network of computers that houses information on a multitude of subjects.

What Is the Internet?

The **Internet** is a worldwide collection of networks that links together millions of businesses, the government, educational institutions, and individuals using modems, telephone lines, and other communication devices and media (Figure 1-2 on page HTM 1.6). More than 125 million people in more than 150 countries are connected to the Internet in their homes, offices, or schools. Users with computers connected to the Internet have access to a variety of services including e-mail, newsgroups, and the World Wide Web.

(b)

(a)

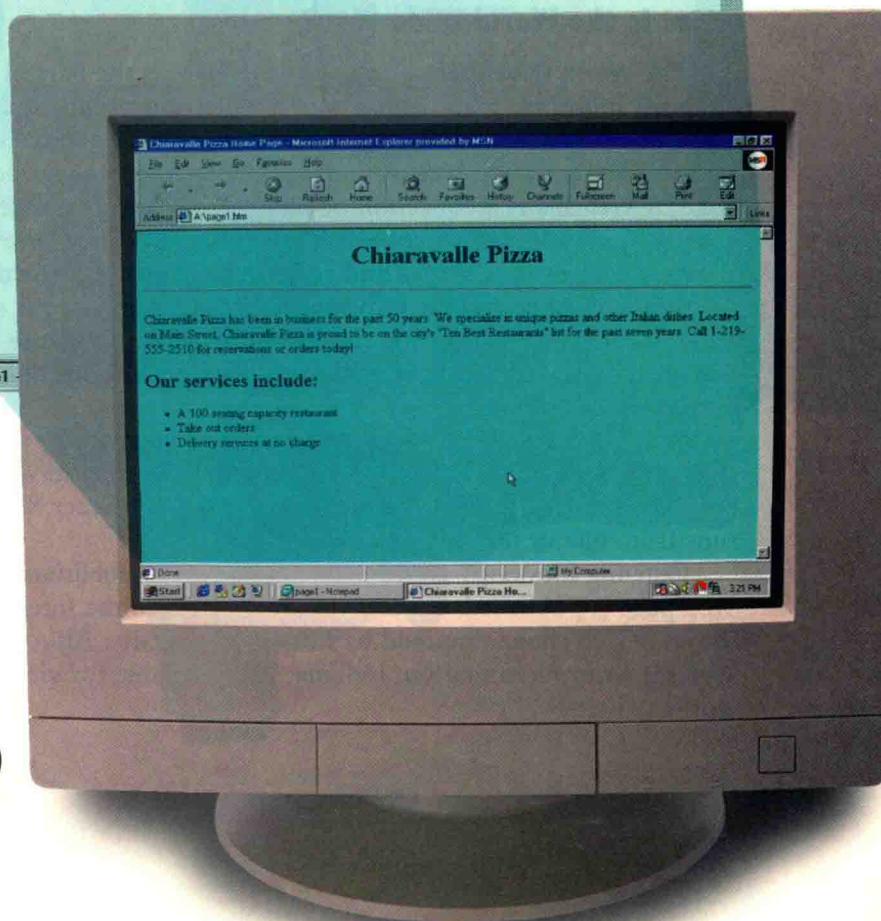

FIGURE 1-1

FIGURE 1-3

A Web page can be linked to other Web pages by the use of hyperlinks. A **hyperlink**, also called a **link**, is used to connect a Web page to another Web page on the same, or a different, Web server located anywhere in the world. Clicking a hyperlink allows you to move quickly from one Web page to another. You also can use hyperlinks to move to a different section of the same Web page. Figure 1-4 shows examples of different types of hyperlinks.

FIGURE 1-4

What Is Hypertext Markup Language?

Web pages are created using **hypertext markup language** (or **HTML**), which is a set of special instructions called **tags** or **markups** that specify links to other documents, as well as how the page is displayed. A Web page is a file that contains both text and
