

SURGICAL PATHOLOGY

By LAUREN V. ACKERMAN, M.D.

Professor of Surgical Pathology and Pathology,
Washington University, School of Medicine ;
Surgical Pathologist, Barnes Hospital and Affiliated Hospitals,
St. Louis ; Consultant to the Ellis Fischel
State Cancer Hospital, Columbia, Mo ; Consultant to
the Armed Forces Institute of Pathology

With 913 Illustrations

Preface

This book can be only an introduction to the vast field of surgical pathology: the pathology of the living. It does not pretend to replace in any way the textbooks of general pathology, its purpose being merely to supplement them, assuming that the reader has a background in or access to those texts. The contents are not as complete as they might be because emphasis has been placed on the common rather than the rare lesions and are, to a great extent, based on the author's personal experiences.

This book has been written for the medical student as well as for those physicians who are daily intimately concerned with surgical pathology. This must of necessity include not only the surgeon and the pathologist, but also those physicians in other fields who are affected by its decisions, such as the radiologist and the internist. Gross pathology has been stressed throughout with an attempt to correlate the gross findings with the clinical observations. The many illustrations have been selected as typical of the various surgical conditions, although in a few instances the author has been unable to resist showing some of the more interesting rare lesions he has encountered. Concluding each chapter there is a bibliography listing those references which are not only relatively recent and readily available, but also those which will lead the reader to a more detailed knowledge of the subject.

Dr. Zola K. Cooper, Assistant Professor of Pathology and Surgical Pathology, has written one of the sections on Skin, and Dr. David E. Smith, Assistant Professor of Pathology and Surgical Pathology, has written the chapter on Central Nervous System. Both of these members of the Department are particularly well qualified for their respective roles because of their background and present responsibilities in these fields. Their efforts on my behalf are most gratefully acknowledged.

Many members of the Surgical Staff at Barnes Hospital have given much help both knowingly and unwittingly. I am particularly grateful to Dr. Charles L. Eckert, Associate Professor of Surgery, for letting me bother him rather constantly with my questions and for giving freely of his experience. Dr. Richard Johnson, who succeeded me as Pathologist at the Ellis Fischel State Cancer Hospital, agreeably made available all the material there, and Dr. Franz Leidler, Pathologist at the Veterans Hospital, has been most cooperative.

Thanks must be given to Dr. H. R. McCarroll, Assistant Professor of Orthopedics, for constructively criticizing the chapter on Bone and Joint, and to Dr. C. A. Waldron for helping me with the chapters related to the Oral Cavity. Among other faculty friends and colleagues who were especially helpful, I would like to mention Dr. Carl E. Lischer, Dr. Eugene M. Bricker, Dr.

4 *Preface*

Heinz Haffner, Dr. Thomas H. Burford, Dr. Carl A. Moyer, Dr. Evarts A. Graham, Dr. Robert Elman, Dr. Edward H. Reinhard, Dr. J. Albert Key, Dr. Glover H. Copher, Dr. Margaret G. Smith, and Dr. Robert A. Moore.

Mr. Cramer K. Lewis, of our Department of Illustration, has been very patient with my demands, and his efforts and skill have been invaluable. Miss Marion Murphy, in charge of our Medical Library, and her associates gave untiringly of their time.

Because of recent advances in anesthesia, antibiotics, and pre- and post-operative care, modern surgery permits the radical excision of portions or all of various organs. There is a need today for contemplative surgeons, men with a rich background in the fundamental sciences, whether chemistry, physiology, or pathology. The modern surgeon should not ask himself, "Can I get away with this operation?" but rather, "What does the future hold for this patient?" It is hoped that this book may contribute in some small fashion toward the acquisition of this attitude.

LAUREN V. ACKERMAN

St. Louis, Mo.

Contents

	PAGE
CHAPTER 1—INTRODUCTION	17
Surgical Pathology and the Surgical Pathologist	17
The Biopsy	19
Aspiration Biopsy	19
Frozen Section	19
Exfoliative Cytology	20
Bone Marrow Biopsy	21
CHAPTER 2—SKIN	22
NON-NEOPLASTIC CONDITIONS (BY ZOLA K. COOPER, PH.D.)	22
The Skin Biopsy	23
General Considerations	25
The Epidermis and Pathologic Processes Occurring Within It	25
The Dermis	31
Skin Appendages	32
Specific Skin Diseases	33
Hypertrophies	33
Atrophies	39
Disturbances of Pigment Distribution	42
Diseases Involving Changes in Collagen	44
Diseases Involving Changes in Elastic Tissue	46
Inflammatory Diseases of Unknown Etiology	47
Inflammatory Nodular Lesions of the Legs	57
Inflammatory Diseases Resulting in Vesicle Formation	59
Diseases Caused by Bacteria	62
Diseases Caused by Fungi	64
“Insect” Bites	67
Granulomas of Unknown Etiology	69
Diseases of Metabolism	70
TUMORS	79
Introduction	79
Subepidermal Nodular Fibrosis (Dermatofibroma, Xanthoma, Sclerosing Hemangioma)	79
Seborrheic and Senile Keratosis	81
Irradiation Effect	83
Basal-Cell and Epidermoid Carcinoma	84
Bowen's Disease	88
Specific Tumors Arising From Skin Appendages	90
Benign and Malignant Tumors of Sweat Gland Origin	90
Dermoid Cysts, Sebaceous Cysts, Epidermal Inclusion Cysts, and Sebaceous Gland Carcinoma	94
Kaposi's Disease	95
Rare Tumors	95
Metastatic Tumors	100
NEVI AND MALIGNANT MELANOMA	102
Introduction	102

Classification and Distribution of Bone Tumors - - - - -	660
Benign Tumors and Non-Neoplastic Lesions - - - - -	660
Metaphyseal Fibrous Defects (Nonosteogenic Fibroma) - - - - -	660
Fibrous Dysplasia - - - - -	661
Osteoid Osteoma - - - - -	664
Chondroblastoma - - - - -	665
Bone Cyst - - - - -	666
Benign Rare Tumors - - - - -	668

14 Contents

	PAGE
Malignant Tumors - - - - -	669
Laboratory Findings - - - - -	669
Biopsy: Incisional, Aspiration, Frozen Section - - - - -	669
Osteosarcoma - - - - -	670
Chondrosarcoma (Enchondroma; Osteochondroma) - - - - -	672
Giant-Cell Tumor (Benign and Malignant) - - - - -	679
Fibrosarcoma - - - - -	682
Ewing's Tumor - - - - -	682
Reticulum-Cell Sarcoma - - - - -	685
Plasma-Cell Tumor - - - - -	686
Metastatic Tumors - - - - -	688
Miscellaneous Conditions - - - - -	690
Paget's Disease - - - - -	690
Myositis Ossificans - - - - -	690
Melorheostosis - - - - -	693
Ganglion - - - - -	693
Giant-Cell Tumor of Tendon Sheath - - - - -	694
Benign Giant-Cell Tumor of Tendon Sheath (Xanthogranuloma; Fibrous Xanthoma; Myeloplaxoma) - - - - -	694
Pigmented Villonodular Synovitis and Bursitis - - - - -	695
Synovial Osteochondromatosis - - - - -	697
Arthritis - - - - -	697
Degenerative Joint Disease (Osteoarthritis) - - - - -	697
Rheumatoid Arthritis - - - - -	701
CHAPTER 22—SOFT TISSUES - - - - -	708
Non-Neoplastic Lesions - - - - -	708
Tumors - - - - -	709
Introduction - - - - -	709
Biopsy - - - - -	709
Tumors and Tumorlike Conditions Arising From Fibrous Tissue - - - - -	711
Tumors of Nerve Sheath Origin - - - - -	717
Tumors Arising From Fat - - - - -	721
Tumors of Lymphatic and Vascular Origin - - - - -	722
Tumors of Smooth Muscle Origin - - - - -	727
Tumors of Striated Muscle - - - - -	728
Tumors of Synovium - - - - -	729
Tumors of Mesenchyme - - - - -	732
Tumors Arising From Nonchromaffin Paraganglia - - - - -	733
Tumors of Uncertain Histogenesis - - - - -	734
Rare Tumors - - - - -	737
CHAPTER 23—PERITONEUM AND RETROPERITONEUM - - - - -	741
Peritoneum - - - - -	741
Inflammation - - - - -	741
Adhesions - - - - -	742
Reaction to Talc and Oily Substances - - - - -	742
Primary Tumors - - - - -	743
Metastatic Tumors - - - - -	745
Interpretation of Tumor Cells in Peritoneal Fluid - - - - -	746
Retroperitoneum - - - - -	747
Introduction - - - - -	747
Non-Neoplastic Conditions - - - - -	748
Primary Tumors - - - - -	750
Metastatic Tumors - - - - -	753
Tumors Arising From Notochord—Chordoma - - - - -	753

	PAGE
CHAPTER 24—VESSELS - - - - -	757
Thrombosis and Embolism - - - - -	757
Mesenteric Vascular Occlusion - - - - -	759
Arteriosclerosis; Popliteal Aneurysm - - - - -	759
Traumatic Aneurysm; Arteriovenous Fistulas - - - - -	762
Berger's Disease - - - - -	762
Polyarteritis Nodosa (Necrotizing Angiitis) - - - - -	762
Varicose Veins - - - - -	765
CHAPTER 25—CENTRAL NERVOUS SYSTEM (By DAVID E. SMITH, M.D.) - -	768
Introduction - - - - -	769
Techniques - - - - -	769
General Considerations and Symptomatology - - - - -	769
Effects of Increased Intracranial Pressure - - - - -	770
Congenital Defects - - - - -	772
Spina Bifida: Meningoceles, Encephaloceles, and Meningomyeloceles - - - - -	772
Teratoid Tumors - - - - -	773
Hydrocephalus - - - - -	775
Arnold-Chiari Deformity and Platybasia - - - - -	776
Congenital Cortical Disorders - - - - -	777
Vascular Diseases - - - - -	777
Vascular Anomalies - - - - -	777
Saccular Aneurysms - - - - -	780
Arteriovenous Fistula - - - - -	782
Cranial Arteritis - - - - -	783
Acute Encephalomalacia - - - - -	783
Traumatic Lesions - - - - -	784
Dural-Cortical Cicatrix - - - - -	784
Subdural Hematoma - - - - -	785
Chronic Arachnoiditis and Arachnoidal Cysts - - - - -	787
Ruptured Intervertebral Disc - - - - -	788
Inflammatory Diseases - - - - -	788
Brain Abscess - - - - -	788
Granulomas: Tuberculomas, Gummas, Fungi, and Parasites - - - - -	790
Chronic Pachymeningitis - - - - -	790
Neoplasms - - - - -	791
Introduction - - - - -	791
Glial Tumors - - - - -	794
Nonglial Tumors - - - - -	804
Metastatic Tumors - - - - -	809
Tumors of Special Tissues - - - - -	809
Amyotrophies and Muscular Dystrophies - - - - -	813
