Handbook of _____
**THERAPEUTIC
BIOMARKERS
IN CANCER**

Preface

The advent of the era of the molecularly targeted therapy in oncology in addition to conventional multimodality management signifies more hope for cancer patients. The discovery, validation, and clinical applications of biomarkers of prognosis and prediction are advancing the promise of personalized medicine. The clinically validated therapeutic (predictive) biomarkers for targeted and chemotherapy agents approved for use or having potential to be approved by the regulatory agencies such as the United States Food and Drug Administration facilitate the evolution of empiric therapy to individually tailored treatment. In essence, therapeutic biomarkers and appropriately validated clinical assays facilitate treatment decision-making. We have clearly entered the epoch that patients can receive the right drugs with the right doses at the right time with greater assurance of maximal benefits and reduced risks.

In editing and organizing the *Handbook of Therapeutic Biomarkers in Cancer*, we have made every attempt to cover the growing numbers of promising predictive biomarkers and associated assays in the fields of oncology and cancer research. We hope that many readers—oncologists, health professionals, patients, scientists involved in basic, translational, and clinical research, educators, and students both medical and undergraduate—will find each chapter of this book a valuable source of information and guidance.

It has been a great privilege to be involved in editing this book. We express our sincere thanks to all authors who have contributed their expertise, experience, and hard work to this book for publication. In addition, we welcome comments for planning future editions.

Contents

<i>Preface</i>	xix
1. Overview: Therapeutic Biomarkers in Cancer	1
<i>Sherry X. Yang and Janet E. Dancey</i>	
1.1 Introduction	2
1.2 Classification of Therapeutic Biomarkers	3
1.3 Chemotherapy Agents and Therapeutic Biomarkers	3
1.4 Targeted Cancer Therapeutics and Biomarkers	7
1.4.1 Targeted Cancer Therapeutics	7
1.4.2 Biomarker Validation	8
1.4.3 Therapeutic Biomarkers of Targeted Therapy	8
1.4.3.1 Direct drug targets as therapeutic biomarkers	8
1.4.3.2 Indirect drug targets as therapeutic biomarkers	12
1.4.3.3 Anti-angiogenesis therapy and biomarkers	13
1.5 Targeted Therapeutics in Combination with Chemotherapy and Therapeutic Biomarkers	17
1.6 Multi-Gene Expression or Signatures for Cancer Prognosis and Treatment	19
1.7 Diagnostic Techniques for Therapeutic Biomarkers	21
1.8 Conclusions and Perspectives	21
2. Statistical Considerations in the Development and Evaluation of Therapeutic Biomarkers in Cancer	31
<i>Lisa M. McShane, Edward L. Korn, and Boris Freidlin</i>	
2.1 Introduction	31
2.2 Analytical Performance of a Biomarker-Based Test	32
2.3 Prognostic versus Predictive Biomarkers	37

2.4	Biomarker Evaluations in Phase I Trials	38
2.5	Biomarker Evaluations in Phase II Trials	40
2.5.1	Designs Involving Single Biomarkers	42
2.5.2	Designs Involving Multiple Biomarkers	43
2.6	Biomarker Evaluations in Phase III Trials	44
2.6.1	Biomarker-Stratified Designs	44
2.6.2	Enrichment Designs	47
2.6.3	Biomarker-Strategy Designs	49
2.6.4	Designs in Which the Biomarker Has Not Been Completely Specified	50
2.7	Summary	52
3.	Role of Biomarkers in Clinical Development of Cancer Therapies	59
	<i>Helen X Chen</i>	
3.1	Introduction	59
3.2	A Few Definitions and General Concepts	60
3.3	Role of Biomarkers in the Different Stages of Drug Development	63
3.3.1	Use of PD Markers in Phase I and Early-Stage Proof of Principle Studies	64
3.3.1.1	Role of PD markers in verifying target engagement	64
3.3.1.2	Role of PD markers in decisions on the recommended phase II dose (RP2D): value and limitations	65
3.3.1.3	Use of distal PD markers to measure the biological and molecular consequences of target inhibition	67
3.3.2	Incorporation and Exploration of Patient Selection Markers in Early Clinical Trials	68
3.3.2.1	Trial design for patient selection markers	70
3.3.2.2	Scientific and technical challenges of predictive markers	71
3.4	Conclusions and Future Directions	73

4. HER-2 as a Prognostic and Predictive Biomarker in Cancer	77
<i>Suparna B. Wedam and Stanley Lipkowitz</i>	
4.1 Introduction	77
4.2 Biology of HER-2	78
4.3 HER-2 Amplification and Overexpression: Methods of HER-2 Measurement	81
4.4 HER-2 Amplification as a Prognostic Biomarker in Breast Cancer	85
4.5 HER-2 Amplification as a Predictive Biomarker for Response to HER-2 Targeted Agents in Breast Cancer	86
4.5.1 Trastuzumab	86
4.5.2 Lapatinib	91
4.5.3 Pertuzumab	93
4.6 HER-2 Amplification as a Predictive Biomarker for Response to Chemotherapy in Breast Cancer	93
4.7 HER-2 Amplification as a Predictive Biomarker for Response to Hormonal Therapy in Breast Cancer	96
4.8 Serum HER-2 Extracellular Domain (ECD) as a Biomarker in Breast Cancer	98
4.9 HER-2 Amplification as a Prognostic Biomarker and a Predictive Biomarker for Response to HER-2 Targeted Agents in Other Cancers	99
4.9.1 Gastric Cancer	99
4.9.2 Ovarian Cancer	100
4.9.3 Non-Small Cell Lung Cancer (NSCLC)	101
4.9.4 Transitional Cell Carcinoma (TCC) of the Urothelium	101
4.9.5 Colorectal Cancer	102
4.9.6 Other Tumors	102
4.10 Conclusions	102
5. Hormone Receptors and Endocrine Therapy in Breast Cancer	121
<i>Sherry X. Yang</i>	
5.1 Introduction	122
5.2 Biology of Hormone Receptors	122

5.3	ER/PgR as Prognostic and Therapeutic Biomarkers	123
5.3.1	ER and PgR as Prognostic Factors in Breast Cancer	124
5.3.2	ER and PgR as Therapeutic Biomarkers in Breast Cancer	125
5.4	ER/PgR Targeted Therapy for Breast Cancer	127
5.4.1	Adjuvant Endocrine Therapy	133
5.4.1.1	Premenopausal patients	133
5.4.1.2	Postmenopausal patients	134
5.4.2	Endocrine Therapy for Recurrent and Metastatic Disease	137
5.4.3	Neoadjuvant Endocrine Therapy	139
5.5	Endocrine Therapy Resistance	139
5.6	Diagnostic Tests for ER and PgR	141
5.6.1	Methods for Evaluation of ER/PgR Expression	141
5.6.2	Immunohistochemical Testing for ER and PgR	142
5.7	Conclusions	143
6.	Predictive Biomarkers for Epidermal Growth Factor Receptor Agents in Non-Small Cell Lung Cancer	155
	<i>John Hilton, Penelope A. Bradbury, and Janet Dancey</i>	
6.1	Introduction	155
6.2	The Epidermal Growth Factor Receptor Family	156
6.3	Signal Transduction Pathways Controlled by the Activation of EGFR	157
6.4	EGFR Inhibitors for the Management of NSCLC	158
6.5	Activating EGFR Receptor Mutations	163
6.6	Biomarkers for Acquired Resistance to EGFR TKIs	167
6.7	EGFR Gene Amplification and Increased Protein Levels	167
6.8	K-Ras Mutations and Anti-EGFR Therapy	170
6.9	EGFR Ligands	171
6.10	Polymorphism Studies and Anti-EGFR Therapy	172
6.11	Circulating Tumor Cells in NSCLC Biomarker Research	173
6.12	Conclusions	174

7. Markers of Sensitivity and Resistance to EGFR**Inhibitors in Colorectal Cancer 183***Jose G. Monzon and Janet Dancey*

7.1	Introduction	183
7.2	The Epidermal Growth Factor Receptor (EGFR) Pathway and Colorectal Cancer	184
7.2.1	RAS/RAF/MAPK Pathway	186
7.2.2	PI3K/AKT Pathway	187
7.3	EGFR Inhibitors Used in Metastatic Colorectal Cancer (mCRC)	187
7.4	Determinants of Sensitivity and Resistance to EGFR Targeting moAbs	193
7.4.1	Clinical Features	194
7.4.1.1	EGFR inhibitor induced-skin rash	194
7.4.2	Potential predictive Genetic Alterations of the EGFR pathway in patients with mCRC	195
7.4.2.1	KRAS mutations	195
7.4.2.2	KRAS mutation detection	195
7.4.2.3	Specimen selection for KRAS mutation testing	198
7.4.2.4	Prognostic significance of KRAS mutation status	199
7.4.2.5	Predictive significance of KRAS mutation status	199
7.4.2.6	BRAF mutations in patients with mCRC	204
7.4.2.7	BRAF mutation detection in patients with mCRC	205
7.4.2.8	Specimen selection for BRAF mutation testing	205
7.4.2.9	Prognostic and predictive role of BRAF mutations	205
7.4.2.10	KRAS Let-7 single nucleotide polymorphism	206
7.4.3	Genetic Mutations Affecting the EGFR Gene	207
7.4.3.1	Somatic EGFR gene mutations	207
7.4.3.2	EGFR gene copy number	208

7.4.3.3	Measuring EGFR gene copy number	208
7.4.3.4	Specimen selection for EGFR gene copy number	209
7.4.3.5	Prognostic value of EGFR gene copy number	209
7.4.3.6	Predictive role of EGFR gene copy number	211
7.4.3.7	PIK3CA mutations	212
7.4.3.8	Measuring PIK3CA mutations	212
7.4.3.9	Specimen selection for PIK3CA mutation testing	212
7.4.3.10	Predictive role of PIK3CA mutation testing	213
7.4.4	Potential Predictive Alterations in Gene Expression of the EGFR Pathway	213
7.4.4.1	EGFR protein expression	213
7.4.4.2	EGFR ligands: amphiregulin and epiregulin	214
7.4.4.3	PTEN loss of expression	215
7.4.4.4	Measuring PTEN expression	215
7.4.4.5	Predictive role of loss of PTEN expression	216
7.5	Future Directions	217
8.	Targeting BCR-ABL for Molecular Therapy of Chronic Myelogenous Leukemia	233
	<i>Shamudheen Rafiyath, Guoqing Wei, and Delong Liu</i>	
8.1	Pathogenesis	234
8.2	Structure of BCR-ABL	235
8.3	Mechanism of CML	236
8.4	Essential Features of BCR-ABL	237
8.5	Targeted Therapies of Chronic Myeloid Leukemia	238
8.5.1	First-Generation Tyrosine Kinase Inhibitors	238
8.5.1.1	Imatinib mesylate	238
8.5.1.2	Monitoring	240

8.5.1.3	Toxicity	240
8.5.1.4	Imatinib resistance	240
8.5.1.5	Mutation analysis	243
8.5.2	Second-Generation Tyrosine Kinase Inhibitors	243
8.5.2.1	Dasatinib	243
8.5.2.2	Nilotinib	246
8.5.3	Management of Resistance to First-Line TKIs	248
8.5.3.1	Bosutinib	251
8.5.3.2	Bafetinib (INNO-406)	252
8.6	Future Horizons in the Treatment of CML	253
8.6.1	T315I Kinase Inhibitors	253
8.6.2	Aurora Kinase Inhibitor	253
8.6.3	Omacetaxine Mepesuccinate	254
8.7	Conclusions and Future Directions	255
9.	Gastrointestinal Stromal Tumors: From Molecular Pathogenesis to Therapy	267
	<i>Joaquina Baranda, Rashna Madan, and Andrew K. Godwin</i>	
9.1	Introduction	267
9.2	Molecular Pathogenesis of GIST	269
9.2.1	Mutations in RTKs: KIT	269
9.2.2	Mutations in RTKs: PDGFRA	272
9.2.3	BRAF Mutation	272
9.3	Hereditary, Syndromic and Variant GISTs	273
9.3.1	Hereditary/Familial GISTs	273
9.3.2	Neurofibromatosis I (NF1)-Associated GISTs	274
9.3.3	Carney's Triad-associated GISTs	274
9.3.4	Carney-Stratakis Syndrome (Carney's Dyad)	274
9.3.5	Pediatric GISTs	274
9.3.6	Risk Assessment	277
9.4	Treatment of GIST	278
9.4.1	Imatinib Mesylate	278
9.4.1.1	Efficacy of imatinib in patients with advanced GIST	279
9.4.1.2	Dose and efficacy	279

9.4.1.3	Duration of therapy	280
9.4.1.4	Management of toxicities	281
9.4.2	Sunitinib	282
9.4.2.1	Management of sunitinib toxicities	284
9.4.3	Sorafenib and Other Tyrosine Kinase Inhibitors	285
9.4.3.1	Assessment of response to therapy	286
9.4.3.2	Adjuvant therapy	287
9.4.4	Biomarkers That Predict Benefit, Response, and Resistance to Therapy	287
9.4.4.1	Response predictors in GIST	287
9.4.4.2	Imatinib plasma levels	290
9.4.4.3	Drug interactions	291
9.4.4.4	Imatinib resistance and intolerance	291
9.4.4.5	Benefit of imatinib as a function of risk stratification	292
9.4.4.6	Molecular biomarkers of therapeutic response	293
9.5	Summary	295
10.	PML/RARα Fusion Gene and Response to Retinoic Acid and Arsenic Trioxide Treatment	313
	<i>Alicja M. Gruszka and Myriam Alcalay</i>	
10.1	Introduction	314
10.1.1	Description of Acute Promyelocytic Leukaemia	314
10.1.2	Modern Therapeutic Approaches	315
10.1.3	Treatment Complications and Prognosis	316
10.2	Molecular Pathogenesis	316
10.2.1	Translocation (15;17) and Cloning of the Fusion Gene	316
10.2.2	Partner Genes and Their Physiological Function	317
10.2.3	Mechanisms of Action of PML/RAR α	318
10.2.3.1	Global transcriptional repression	319

10.2.3.2	Transcriptional activation	321
10.2.3.3	Deregulation of other haematopoietic transcription factors	322
10.2.3.4	Protein misfolding	323
10.2.4	Consequences of the Expression of PML/RAR α	323
10.2.4.1	Differentiation block	323
10.2.4.2	Enhanced self-renewal	323
10.2.4.3	Apoptosis resistance	324
10.2.5	The Role of Cooperating Mutations	325
10.3	Mechanisms of Action of ATRA and Arsenic Trioxide	326
10.3.1	Mechanisms of ATRA Action	326
10.3.2	Mechanisms of Arsenic Trioxide Action	327
10.3.3	Synergy Between ATRA and Arsenic Trioxide	329
10.4	Conclusions	330
11.	Dihydropyrimidine Dehydrogenase Deficiency and 5-Fluorouracil Toxicity	337
	<i>Eva Gross and André B. P. van Kuilenburg</i>	
11.1	Introduction	337
11.2	Variability of the <i>DPYD</i> Gene	338
11.3	Epigenetic and Non-Genetic Effects on <i>DPYD</i> Dysregulation	341
11.4	Functional Testing of the DPD Status	342
11.5	Conclusion	343
12.	UGT1A1 Polymorphisms and Mutations Lead to Irinotecan-Induced Toxicity	353
	<i>K. M. Reece and W. D. Figg</i>	
12.1	Irinotecan	353
12.2	The UGT1A Gene Complex	356
12.3	Pharmacogenetics of UGT1A1	357
12.4	Ethnic Differences in UGT1A1 Variants	359
12.5	Crigler-Najjar Syndrome	360
12.6	Gilbert's Syndrome	363
12.7	Conclusion	363

13. The 21-Gene Recurrence Score and Benefit of Chemotherapy in Estrogen Receptor-Positive Breast Cancer	369
<i>Petra Rietschel and Joseph A. Sparano</i>	
13.1 Introduction	369
13.2 Genomics	370
13.3 Development and Validation of Multiparameter Assays	370
13.4 Development of the 21-Gene Recurrence Score	371
13.5 Recurrence Score and Prognosis	374
13.6 Recurrence Score and Prediction of Chemotherapy Benefit	378
13.7 Impact of RS on Clinical Decision Making	379
13.8 Gene Expression Profiles and Expert Panels	381
13.9 Prospective Clinical Trials Evaluating Multiparameter Assays	382
13.10 Conclusion	382
14. MammaPrint for Individualized Recurrence Risk Assessment and Treatment Recommendations for Early-Stage Breast Cancer Patients	387
<i>Sonal J. Desai and Tianhong Li</i>	
14.1 Introduction	387
14.2 Discovery of MammaPrint	388
14.3 Retrospective Clinical Validation	389
14.4 Analytic Development for MammaPrint as a Diagnostic Test	397
14.5 Prospective Clinical Validation of MammaPrint	398
14.6 Biologic Implication of MammaPrint Results	400
14.6.1 Understanding of Tumor Biology	400
14.6.2 Revealing New Therapeutic Targets	401
14.6.3 Prediction for Response or Resistance to Chemotherapy	403
14.6.4 Elucidation of Resistant Mechanisms to Chemotherapy	405
14.7 Potential Advantages of MammaPrint as a Prognostic Test	406
14.8 Challenges in Clinical Application of MammaPrint	407
14.9 Summary and Perspectives	408

15. *BRCA* Mutation and PARP Inhibitors 417

Marcie K. Weil, Shivaani Kummar, James H. Doroshow, and Alice Chen

15.1	Introduction	417
15.2	<i>BRCA</i>	418
15.3	Poly (ADP-Ribose) Polymerase (PARP)	422
15.4	PARP Inhibitors as Single Agents to Induce Synthetic Lethality in <i>BRCA</i> Tumor Cells	425
15.5	PARP Inhibitors in Combination with Cytotoxic Therapy	426
15.6	PARP Inhibitors in Combination with Ionizing Radiation (XRT)	428
15.7	Clinical Development of PARP Inhibitors	428
15.7.1	Olaparib (AZD 2281, KU-0059436)	428
15.7.1.1	<i>BRCA</i> -mutation ovarian cancer and olaparib	429
15.7.1.2	<i>BRCA</i> -mutation associated breast cancer and olaparib	431
15.7.2	Veliparib (ABT888)	431
15.7.2.1	<i>BRCA</i> breast and ovarian cancers and TNBC with veliparib	432
15.7.3	Rucaparib (AG014699, PF01367338)	432
15.7.4	Iniparib (BSI 201, NSC-746045; IND-71677)	434
15.7.5	Niraparib (MK 4827)	435
15.8	Acquired Resistance to PARP Inhibitors	435
15.9	Future Directions	437

16. *EML4*-*ALK* Fusion Gene and Therapy with *ALK*-Targeted Agents in Non-Small Cell Lung Cancer 449

Vimal Patel and Biren Saraiya

16.1	Introduction	449
16.2	The Identification of <i>EML4</i> - <i>ALK</i> in NSCLC	450
16.2.1	The Structure and Function of <i>EML4</i>	451
16.2.2	The Structure and Function of <i>ALK</i>	452
16.2.3	The <i>ALK</i> Gene Rearrangements in Cancer	453
16.2.4	The Structure of <i>EML4</i> - <i>ALK</i> and Other Non- <i>EML4</i> Translocation Partners	454

16.2.5	The Transforming Activity of <i>EML4-ALK</i>	455
16.3	Clinical and Pathologic Features of <i>EML4-ALK</i>	456
16.4	Methods of Detection	458
16.4.1	Reverse Transcriptase-PCR Based Detection	459
16.4.2	Immunohistochemistry Based Detection	459
16.4.3	Fluorescence <i>in situ</i> Hybridization Based Detection	460
16.4.4	Potential Concerns Independent of the Method of Detection	462
16.5	Outcomes with Current Standard NSCLC Therapies	463
16.5.1	Preclinical ALK Targeted Therapies in NSCLC	464
16.5.2	Clinical Studies with Crizotinib	465
16.5.3	Resistance to Crizotinib and Emergence of New ALK Inhibitors	465
16.6	Future Directions	466
17.	BRAF-Targeted Therapy in Metastatic Melanoma	473
	<i>Noori Kim and April Deng</i>	
17.1	Introduction	473
17.2	BRAF and the MAPK Pathway	474
17.3	BRAF V600E Mutation in Melanoma	476
17.4	Sorafenib and PLX4032	478
17.5	Other RAF Inhibitors	481
17.6	BRAF Inhibition Resistance Mechanisms	482
17.6.1	The Role of RAF Isoforms	482
17.6.2	The Role of IGF-1R and PI3K-AKT Pathway	483
17.6.3	Amplification of Cyclin-Dependent Kinase	484
17.6.4	The Role of Growth Factors	484
17.6.5	The Role of Cytokines	484
17.7	Final Thoughts	485
	<i>Index</i>	491
