### Effective Publication Dates of ODP *Proceedings*

According to the International Code of Zoological Nomenclature, the date of publication of a work and of a contained name or statement affecting nomenclature is the date on which the publication was mailed to subscribers, placed on sale, or when the whole edition is distributed free of charge, mailed to institutions and individuals to whom free copies are distributed. The mailing date, *not the printed date*, is the correct one.

The mailing dates of recent *Proceedings of the Ocean Drilling Program* are as follows:

Volume 173 (*Initial Reports*): July 1998  
Volumes 174A/174AX/174B (*Initial Reports*): November 1998  
Volume 175 (*Initial Reports*): November 1998  
Volume 157 (*Scientific Results*): June 1998  
Volumes 159/159T (*Scientific Results*): October 1998  
Volume 160 (*Scientific Results*): September 1998

### Distribution

Copies of this publication may be obtained from Publications Distribution Center, Ocean Drilling Program, 1000 Discovery Drive, College Station, Texas 77845-9547, U.S.A. Orders for copies will require advance payment. See current ODP publication list for price and availability of this publication.

# Foreword

By the National Science Foundation

The National Science Foundation is proud to play a leading role in partnership with the U.S. oceanographic community in the operation and management of the Ocean Drilling Program (ODP). We are equally proud of the cooperation and commitment of our international partners, who contribute both financial and intellectual resources required to maintain the high quality of this unique program. The Ocean Drilling Program, like its predecessor, the Deep Sea Drilling Project (DSDP), is a model for the organization and planning of research to address global scientific problems that are of high priority internationally and of long-term interest to the scientific community and general public.

Major scientific themes guiding the development of specific drilling cruises range from determining the causes and effects of oceanic and climatic variability to understanding the circulation of fluids in the ocean crust and the resultant formation of mineral deposits. Although such studies are at the forefront of basic scientific inquiry into the processes that control and modify the global environment, they are equally important in providing the background for assessing man's impact on the global environment or for projecting resource availability for future generations.

The transition from the DSDP to the ODP was marked by a number of changes. The 471-foot *JOIDES Resolution*, which replaced the *Glomar Challenger*, has allowed larger scientific parties and the participation of more graduate students, a larger laboratory and technical capability, and operations in more hostile ocean regions. The *JOIDES Resolution* has drilled in all of the world's oceans, from the marginal ice regions of the Arctic to within sight of the Antarctic continent. Over 1,200 scientists and students from 26 nations have participated on project cruises. Cores recovered from the cruises and stored in ODP repositories in the United States and Europe have provided samples to an additional 1,000 scientists for longer term post-cruise research investigations. The downhole geochemical and geophysical logging program, unsurpassed in either academia or industry, is providing remarkable new data with which to study the Earth.

In 1994, NSF and our international partners renewed our commitment to the program for its final phase. Of the 20 countries that supported ODP initially, only one, Russia, has been unable to continue for financial reasons. As the reputation and scientific impact of the program continue to grow internationally, we hope to add additional members and new scientific constituencies. This global scientific participation continues to assure the program's scientific excellence by focusing and integrating the combined scientific knowledge and capabilities of its member nations.

We wish the program smooth sailing and good drilling!

Neal Lane  
Director  
National Science Foundation  
Arlington, Virginia

# Foreword

By Joint Oceanographic Institutions, Inc.

This volume presents scientific and engineering results from the Ocean Drilling Program (ODP). The papers presented here address the scientific and technical goals of the program, which include providing a global description of geological and geophysical structures including passive and active margins and sediment history, and studying in detail areas of major geophysical activity such as mid-ocean ridges and the associated hydrothermal circulations.

The Ocean Drilling Program, an international activity, operates a specially equipped deep-sea drilling ship, the *JOIDES Resolution*, which contains state-of-the-art laboratories, equipment, and computers. The ship is 471 feet (144 meters) long, is 70 feet (21 meters) wide, and has a displacement of 18,600 short tons. Her derrick towers 211 feet (64 meters) above the waterline, and a computer-controlled dynamic-positioning system stabilizes the ship over a specific location while drilling in water depths up to 27,000 feet (8230 meters). The drilling system collects cores from beneath the seafloor with a derrick and drawworks that can handle 30,000 feet (9144 meters) of drill pipe. More than 12,000 square feet (1115 square meters) of space distributed throughout the ship is devoted to scientific laboratories and equipment. The ship sails with a scientific and technical crew of 51 and a ship's crew (including the drill crew) of 62. The size and ice-strengthening of the ship allow drilling in high seas and ice-infested areas as well as permit a large group of multidisciplinary scientists to interact as part of the scientific party.

Logging, or measurements in the drilled holes, is an important part of the program. ODP provides a full suite of geochemical and geophysical measurements for every hole deeper than 1300 feet (400 meters). For each such hole, there are lowerings of basic oil-industry tools: nuclear, sonic, and electrical. In addition, a Formation MicroScanner is available for high-resolution imaging the wall of the hole, a 12-channel logging tool provides accurate velocity and elastic property measurements as well as sonic waveforms for spectral analysis of energy propagation near the wall of the hole, and a vertical seismic profiler can record reflectors from below the total depth of the hole.

The management of the Ocean Drilling Program involves a partnership of scientists and governments. International oversight and coordination are provided by the ODP Council, a governmental consultative body of the partner countries, which is chaired by a representative from the United States National Science Foundation (NSF). The ODP Council periodically reviews the general progress of the program and discusses financial plans and other management issues. Overall scientific and management guidance is provided to the operators of the program by representatives from the group of institutions involved in the program, called the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES).

The Executive Committee (EXCOM), made up of the administrative heads of the JOIDES institutions, provides general oversight for ODP. The Science Committee (SCICOM), with its advisory structure, is made up of working scientists and provides scientific advice and detailed planning for the Ocean Drilling Program. SCICOM has a network of panels and committees that screen drilling proposals, evaluate instrumentation and measurement techniques, and assess geophysical survey data and other safety and siting information. SCICOM uses the recommendations of the panels and committees to select drilling targets, to specify the location and major scientific objectives of each two-month drilling segment or leg, and to provide the science operator with nominations for co-chief scientists.

Joint Oceanographic Institutions, Inc. (JOI), a nonprofit consortium of U.S. oceanographic institutions, serves as the National Science Foundation's prime contractor for ODP. JOI is responsible for seeing that the scientific objectives, plans, and recommendations of the JOIDES committees are translated into scientific operations consistent with scientific advice and budgetary constraints. JOI subcontracts the operations of the program to two universities: Texas A&M University and Lamont-Doherty Earth Observatory of Columbia University. JOI is also responsible for managing the U.S. contribution to ODP under a separate cooperative agreement with NSF.

Texas A&M University (TAMU) serves as science operator for ODP. In this capacity, TAMU is responsible for planning the specific ship operations, actual drilling schedules, and final scientific rosters, which are developed in close cooperation with SCICOM and the relevant panels. The science operator also ensures that adequate scientific analyses are performed on the cores by maintaining the shipboard scientific laboratories and computers and by providing logistical and technical support for shipboard scientific teams. Onshore, TAMU manages scientific activities after each leg, is curator for the cores, distributes samples, and coordinates the editing and publication of scientific results.

Lamont-Doherty Earth Observatory (LDEO) of Columbia University is responsible for the program's logging operation, including processing the data and providing assistance to scientists for data analysis. The ODP Data Bank, a repository for geophysical data, is also managed by LDEO.

Core samples from ODP and the previous Deep Sea Drilling Project are stored for future investigation at four sites: ODP Pacific and Indian Ocean cores at TAMU, DSDP Pacific and Indian Ocean cores at the Scripps Institution of Oceanography, ODP and DSDP Atlantic and Antarctic cores through Leg 150 at LDEO, and ODP Atlantic and Antarctic cores since Leg 151 at the University of Bremen, Federal Republic of Germany.

Scientific achievements of ODP include new information on early seafloor spreading and how continents separate and the margins evolve. The oldest Pacific crust has been drilled and sampled. We have new insights into glacial cycles and the fluctuations of ocean currents throughout geological time. ODP has also provided valuable data that shed light on fluid pathways through the lithosphere, global climate change both in the Arctic and near the equator, past sea-level change, seafloor mineralization, the complex tectonic evolution of oceanic crust, and the evolution of passive continental margins.

Many of the scientific goals can be met only with new technology; thus the program has focused on engineering as well as science. To date, ODP engineers have demonstrated the capability to drill on bare rock at mid-ocean-ridge sites and have developed techniques for drilling in high-temperature and corrosive regions typical of hydrothermal vent areas. A new diamond coring system promises better core recovery in difficult areas. In a close collaborative effort between ODP engineers and scientists, a system has been developed that seals selected boreholes ("CORKs") and monitors downhole temperature, pressure, and fluid composition for up to three years. When possible, ODP is also taking advantage of industry techniques such as logging while drilling, to obtain continuous downhole information in difficult-to-drill formations.

JOI is pleased to have been able to play a facilitating role in the Ocean Drilling Program and its cooperative activities, and we are looking forward to many new, exciting results in the future.

James D. Watkins

# Preface

The *Scientific Results* volumes of the *Proceedings of the Ocean Drilling Program* contain specialty papers presenting the results of extensive research in various aspects of scientific ocean drilling. The authors of the papers published in this volume have enabled future investigators to gain ready access to the results of their research, and I acknowledge their contributions with thanks.

Each paper submitted to a *Scientific Results* volume undergoes rigorous peer review by at least two specialists in the author's research field. A paper typically goes through at least one revision cycle before being accepted for publication. We seek to maintain a peer-review system comparable to those of the most highly regarded journals in the geological sciences.

Each *Scientific Results* volume has an Editorial Review Board that is responsible for obtaining peer reviews of papers submitted to the volume. This board usually is made up of the two co-chief scientists for the cruise, the ODP staff scientist for the cruise, and one external specialist who is familiar with the geology of the area investigated. In addition, the volume has an ODP staff editor who assists with manuscripts that require English-language attention and who coordinates volume assembly.

*Scientific Results* volumes may also contain short reports of useful data that are not ready for final interpretation. Papers of this type are called Data Reports and include no interpretation of results. Data Report papers are read carefully by at least one specialist to make sure they are well organized, comprehensive, and discuss the techniques or procedures thoroughly.

To acknowledge the contributions made by this volume's Editorial Review Board, the Board members are designated Editors of the volume and are so listed on the title page. Reviewers of manuscripts for this volume, whose efforts are so essential to the success of the publication, are listed in the front of the book, without attribution to a particular manuscript.

On behalf of the Ocean Drilling Program, I extend sincere appreciation to members of the Editorial Review Boards and to the reviewers for giving their generous contribution of time and effort, which ensures that only papers of high scientific quality are published in the *Proceedings*.

A handwritten signature in black ink, appearing to read 'Paul J. Fox', with a long horizontal line extending to the left.

## PUBLISHER'S NOTES

This publication was prepared by the Ocean Drilling Program, Texas A&M University, as an account of work performed under the international Ocean Drilling Program, which is managed by Joint Oceanographic Institutions, Inc., under contract with the National Science Foundation. Funding for the program was provided by the following agencies at the time of this cruise:

Canada/Australia Consortium for the Ocean Drilling Program, Department of Energy, Mines and Resources (Canada), and Department of Primary Industries and Energy (Australia)  
Deutsche Forschungsgemeinschaft (Federal Republic of Germany)  
European Science Foundation Consortium for Ocean Drilling (Belgium, Denmark, Finland, Greece, Iceland, Italy, The Netherlands, Norway, Spain, Sweden, Switzerland, and Turkey)  
Institut Français de Recherche pour l'Exploitation de la Mer (France)  
National Science Foundation (United States)  
Natural Environment Research Council (United Kingdom)  
University of Tokyo, Ocean Research Institute (Japan)

Any opinions, findings, and conclusions or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the National Science Foundation, the participating agencies, Joint Oceanographic Institutions, Inc., Texas A&M University, or Texas A&M Research Foundation.

Current policy requires that all figures published in *Scientific Results* volumes of the *Proceedings of the Ocean Drilling Program* be provided by the authors.

Abbreviations for names of organizations and publications in ODP reference lists follow the style given in *Chemical Abstracts Service Source Index* (published by American Chemical Society).

The printed version of the *Proceedings of the Ocean Drilling Program* series will end with *Initial Reports* volume 175 and *Scientific Results* volume 169S. Beginning with *Initial Reports* volume 176 and *Scientific Results* volume 169, all *Proceedings* volumes will be published on CD-ROM and the World Wide Web <<http://www-odp.tamu.edu/publications/>>.

*Initial Reports*—CD-ROM format: ISSN 1096-2522

WWW format: ISSN 1096-2158

*Scientific Results*—CD-ROM format: ISSN 1096-2514

WWW format: ISSN 1096-7451

# TABLE OF CONTENTS

## VOLUME 161—SCIENTIFIC RESULTS

### SECTION 1: SEDIMENTOLOGY/PHYSICAL PROPERTIES/TEPHRACHRONOLOGY

1. Petrography and mineralogy of the uppermost Messinian section and the Pliocene/Miocene boundary at Site 975, Western Mediterranean Sea ..... 3  
K.M. Marsaglia and J.S. Tribble
2. Mineral associations and geochemical indicators in upper Miocene to Pleistocene sediments in the Alboran Basin ..... 21  
F. Martínez-Ruiz, M.C. Comas, and B. Alonso
3. Sand provenance in the Alboran and Tyrrhenian Basins ..... 37  
K.M. Marsaglia, K.K. Latter, and V. Cline
4. Pliocene–Pleistocene sedimentary facies at Site 976: depositional history in the northwestern Alboran Sea ..... 57  
B. Alonso, G. Ercilla, F. Martínez-Ruiz, J. Baraza, and A. Galimont
5. The sedimentary record of the Alboran Basin: an attempt at sedimentary sequence correlation and subsidence analysis ..... 69  
J. Rodríguez-Fernández, M.C. Comas, J. Soria, J.A. Martín-Pérez, and J.I. Soto
6. Environmental significance of an uppermost Pliocene carbonate debris flow at Site 978 ..... 77  
J.C. Braga and M.C. Comas
7. Description, classification, and origin of upper Pliocene–Holocene marine sediments in the Alboran Basin. .... 83  
C.G. Skilbeck and J.S. Tribble
8. Mineralogy and microfabric of sediment from the Western Mediterranean Sea ..... 99  
J.S. Tribble and R.H. Wilkens
9. Ferromagnetic and matrix susceptibilities in Pliocene–Pleistocene hemipelagic marls from the Western Mediterranean Sea ..... 111  
C. Aubourg, A. Murat, M. Torii, and O. Oufi
10. Fluid overpressures in western Mediterranean sediments, Sites 974–979. .... 117  
A. Revil, P.A. Pezard, and F.D. de Larouzière
11. Coring-induced magnetic fabric in piston cores from the western Mediterranean ..... 129  
C. Aubourg and O. Oufi
12. Chronology and composition of volcaniclastic ash layers in the central Tyrrhenian Basin (Site 974). .... 137  
P. van den Bogaard, B. Mocek, and M. Stavesand

### SECTION 2: BIOSTRATIGRAPHY/PALEONTOLOGY

13. Pleistocene calcareous nannofossil biostratigraphy and the western Mediterranean sapropels, Sites 974 to 977 and 979 ..... 159  
E. de Kaenel, W.G. Siesser, and A. Murat

14. Biostratigraphy and paleoceanography of the Pliocene at Sites 975 (Menorca Rise) and 976 (Alboran Sea) from a quantitative analysis of the planktonic foraminiferal assemblages . . . . .	185
F. Serrano, J.M. González-Donoso, and D. Linares	
15. High-resolution biostratigraphy at the Miocene/Pliocene boundary in Holes 974B and 975B, western Mediterranean . . . . .	197
S.M. Iaccarino, M.B. Cita, S. Gaboardi, and G.M. Gruppini	
16. Neogene calcareous nannofossils: western Mediterranean biostratigraphy and paleoclimatology . . . . .	223
W.G. Siesser and E.P. de Kaenel	
17. Image-analysis comparison of holotypes of the calcareous nannofossil genus <i>Scyphosphaera</i> . . .	239
W.G. Siesser and J.C. Marler	

### SECTION 3: TECTONICS/STRUCTURAL GEOLOGY/PETROLOGY/GEOPHYSICS

18. Metamorphism of calc-silicate rocks from the Alboran basement . . . . .	251
V. López Sanchez-Vizcaíno and J.I. Soto	
19. Pressure-temperature evolution of the metamorphic basement of the Alboran Sea: thermobarometric and structural observations . . . . .	263
J.I. Soto, J.P. Platt, M. Sánchez-Gómez, and J.M. Azañón	
20. The high-grade basement of the Alboran Sea: structural and PT evolution . . . . .	281
G. Prosser, P. Spadea, and C. Doglioni	
21. Fission-track analysis of samples from the Alboran Sea basement. . . . .	295
A.J. Hurford, J.P. Platt, and A. Carter	
22. Ar-Ar dating of biotite and muscovite from Alboran basement samples, Site 976 . . . . .	301
S.P. Kelley and J.P. Platt	
23. Correlation between metamorphic rocks recovered from Site 976 and the Alpujárride rocks of the western Betics . . . . .	307
M. Sánchez-Gomez, J.M. Azañón, V. García-Dueñas, and J.I. Soto	
24. Structure and tectonic stresses in metamorphic basement, Site 976, Alboran Sea. . . . .	319
F.D. de Larouzière, P.A. Pezard, M.C. Comas, B. Célérier, and C. Vergniault	
25. Brittle deformation in the metamorphic basement at Site 976: implications for middle Miocene extensional tectonics in the Western Alboran Basin . . . . .	331
M.C. Comas and J.I. Soto	
26. Pliocene to Holocene structure of the Eastern Alboran Sea (western Mediterranean) . . . . .	345
J. Alvarez-Marrón	
27. Evidence for Miocene subduction beneath the Alboran Sea: $^{40}\text{Ar}/^{39}\text{Ar}$ dating and geochemistry of volcanic rocks from Holes 977A and 978A . . . . .	357
K. Hoernle, P. van den Bogaard, S. Duggen, B. Mocek, and D. Garbe-Schönberg	
28. <i>Data Report</i> : Major- and trace-element chemistry of Site 976 basement rocks (Alboran Sea). . . .	375
P. Spadea and G. Prosser	

## SECTION 4: ORGANIC, INORGANIC, AND INTERSTITIAL WATER GEOCHEMISTRY

29. Sources, preservation, and thermal maturity of organic matter in Pliocene–Pleistocene organic-carbon-rich sediments of the western Mediterranean Sea .....383  
P.A. Meyers and H. Dose
30. Molecular indicators of the supply of marine and terrigenous organic matter to a Pleistocene organic-matter-rich layer in the Alboran Basin (Western Mediterranean Sea).....391  
M. Hauschildt, J. Rinna, and J. Rullkötter
31. Carbon and nitrogen stable isotope ratios at Sites 969 and 974: interpreting spatial gradients in sapropel properties .....401  
J.C. Milder, J.P. Montoya, and M.A. Altabet
32. Carbon, sulfur, and oxygen isotope geochemistry of interstitial waters from the western Mediterranean .....413  
M.E. Böttcher, S.M. Bernasconi, and H.-J. Brumsack
33. Interstitial water chemistry in the western Mediterranean: results from Leg 161 .....423  
S.M. Bernasconi
34. Bacterial profiles in deep sediments of the Alboran Sea, western Mediterranean, Sites 976–978.....433  
B.A. Cragg, K.M. Law, G.M. O’Sullivan, and R.J. Parkes

## SECTION 5: PALEOCEANOGRAPHY AND PALEOCLIMATE

35. Paleoceanographic conditions during the Quaternary at Sites 976 (Alboran Sea) and 975 (Menorca Rise) inferred from the planktonic foraminiferal assemblages: basis for a biostratigraphy. ....441  
D. Linares, J.M. González-Donoso, and F. Serrano
36. Quaternary marine and continental paleoenvironments in the western Mediterranean (Site 976, Alboran Sea): palynological evidence.....457  
N. Combourieu Nebout, L. Londeix, F. Baudin, J.-L. Turon, R. von Grafenstein, and R. Zahn
37. Planktonic  $\delta^{18}\text{O}$  records at Sites 976 and 977, Alboran Sea: stratigraphy, forcing, and paleoceanographic implications .....469  
R. von Grafenstein, R. Zahn, R. Tiedemann, and A. Murat
38. Paleoceanography of the western Mediterranean during the Pleistocene: oxygen and carbon isotope records at Site 975.....481  
C. Pierre, P. Belanger, J.F. Saliège, M.J. Urrutiaguer, and A. Murat
39. Planktonic  $\delta^{18}\text{O}$  and  $\text{U}^{K'}_{37}$  temperature estimates from organic-rich sediments at Sites 974 and 975, Tyrrhenian Sea and Balearic Rise .....489  
H. Dose, R. Zahn, S. Bernasconi, M. Pika-Biolzi, A. Murat, C. Pierre, and P. Belanger
40. Magnetic and microfaunal characterization of late Quaternary sediments from the western Mediterranean: inferences about sapropel formation and paleoceanographic implications .....505  
L. Capotondi and L. Vigliotti
41. Pliocene–Pleistocene occurrence of sapropels in the Western Mediterranean Sea and their relation to eastern Mediterranean sapropels.....519  
A. Murat

42. Paleoenvironment of uppermost Messinian sequences in the western Mediterranean (Sites 974, 975, and 978) .....	529
S.M. Iaccarino and A. Bossio	
43. The Messinian record of the outcropping marginal Alboran Basin deposits: significance and implications .....	543
J.M. Martín, J.C. Braga, and I. Sánchez-Almazo	

## SECTION 6: SYNTHESIS

44. The origin and tectonic history of the Alboran Basin: insights from Leg 161 results .....	555
M.C. Comas, J.P. Platt, J.I. Soto, and A.B. Watts	

## SECTION 7: INDEX

45. Index .....	583
-----------------	-----

## BACK-POCKET MATERIALS

### Oversized Figures

Chapter 44:

Figures 16–19. Multichannel seismic reflection profiles across the Alboran Sea obtained by the *Robert C. Conrad* in 1988 (Watts et al., 1993). Upper plots are original profiles; lower plots are draw-line interpretations.

Figure 16. Line 827. DSDP 121 projects penetration at Site 976 (located 8 km to the northeast).

Figure 17. Line 825.

Figure 18. Line 824.

Figure 19. Line 823 showing position of Sites 977 and 978.

### CD-ROM

The “*Proceedings, Scientific Results*” CD-ROM contains an electronic version of the Leg 161 *Scientific Results* volume in Adobe Acrobat, as well as data sets and images not included in the printed volume (see directory contents below). The volume is designed for Adobe Acrobat Reader 3 software, which is supplied on the CD. All files with a .PDF extension should be viewed through Acrobat. Data files in ASCII format (files with .TXT extensions) should be opened through a spreadsheet or text-editing software application.

#### Contents of the 161\_SR Directory:

ACROREAD.TXT (how to install Adobe Acrobat)  
 ACROREAD (software for Acrobat Reader 3)  
 README.PDF (information about CD volume)  
 README.TXT (information about CD volume)  
 161SR.PDF (volume table of contents)  
 VOLUME (Leg 161 *Scientific Results* volume files)  
 PRELIM.PDF (volume preliminary pages)  
 BACKPKT.PDF (volume back-pocket figures)  
 CHAPTERS  
 CHAP\_##.PDF (44 volume chapters)  
 CD\_ONLY (extra data sets and images; see below for list of files)  
 161INDEX.PDF (volume index)  
 ODPINDEX (compiled *Proceedings* electronic index)

#### List of CD\_ONLY files:

##### CHAP\_04 (Chapter 4):

04\_03.TXT: Table 3. Textural and bulk mineralogical data recovered from Pliocene and Pleistocene sediments in the northwestern Alboran Sea (Hole 976B).

##### CHAP\_07 (Chapter 7):

07\_01.TXT: Table 1. Raw data from ODP Alboran Sea samples.

07\_02.TXT: Table 2. X-ray quantification data from ODP Alboran Sea samples.

##### CHAP\_08 (Chapter 8):

APPEND\_A: Appendix A. Digital backscattered electron image files collected at five magnifications (100×, 200×, 500×, 1000×, and 2000×) at a minimum of three randomly chosen locations (a, b, c) on each sample. The following list of .PDF files for sample 01\_3\_082 from Hole 974B serves as an example of the files to be found within the hole directories. Hole 974B was chosen for detailed image analysis, whereas samples of ~0.5, 2.0, and 5.0 Ma were taken from each of the other sites.

##### HOLE974B

01\_3\_082 (directory name refers to Core 1, Section 3, depth in section in centimeters)

01H3A1K.PDF (file name refers to Core 1H, Section 3, location a, and a magnification of 1000×)

01H3A200.PDF

01H3A3K.PDF

01H3A3K2.PDF
