Microeconomics

Second Edition

To Brett and Sarah

PREFACE

To the Student

Why do you sometimes find two or three gas stations at the same intersection? Why does the value of a new car plummet the instant you drive it off the lot? Why do we have bosses? Why do people have to spend so much time searching for an apartment in rent-controlled areas? Why do amusement parks often charge a whopping admission price to the park and almost nothing for the rides? Why does McDonald's break down the job of making hamburgers into so many little tasks and hire different workers to do each one? Why does IBM produce a whole spectrum of products? Why are some markets—such as the market for local telephone services—monopolized, and others—such as the markets for haircuts or carpet shampooing—highly competitive? What is the best way to alleviate the annoying traffic congestion that plagues so many North American cities?

As you work your way through this book, you'll discover the answers to these and many other questions. But microeconomics is not just a listing of specific economic questions and their answers. Rather, it is a systematic way to set out and solve virtually any question that you might encounter in everyday economic life. Our primary goal in writing this book is to help you

learn how to formulate intriguing economic questions and then start finding the answers.

In Chapter 1, we explain the working methodology of the microeconomic theorist—not by talking about it, but by showing you how to create and explore a specific economic model. This “hands on” approach is used throughout the book and is reinforced by many in-chapter problems and end-of-chapter exercises aimed at engaging you in active, participatory reading. (We provide answers to the in-chapter problems at the end of the book.) Our philosophy is that the only way to learn microeconomics is to do it—every step of the way.

Doing economics well means understanding economic analysis thoroughly. We present all the standard topics of microeconomic analysis in a series of carefully sequenced steps. The narrative style of presentation means that each topic flows naturally from what came before it and leads smoothly into what follows. By working actively through the text and the accompanying problems, you will come away with a solid understanding of the major topics of microeconomics.

Of course, microeconomics is a field that is still changing—and that is its real challenge. We provide you with an overview of current research in representative areas,

including the theory of the firm, the theory of oligopoly and market structure, the economics of information, and the address (or characteristics) approach to product differentiation. In exploring these topics, you will be able to reach the frontiers of microeconomic research — and to see just how much exciting work in microeconomics remains to be done.

To the Instructor

This book is intended for use in undergraduate courses in intermediate microeconomics. We do not use calculus in the text itself, where we rely on carefully explained graphic techniques. However, we do provide complete calculus footnotes.

The approximately 180 in-chapter problems, all of which are answered at the back of the book, are reinforced and extended by a similar number of end-of-chapter exercises. Especially difficult exercises are marked with an asterisk. You will find answers to all the end-of-chapter exercises in the *Instructor's Resource Book*. The *Instructor's Resource Book* also contains a series of easy-to-administer classroom experiments that illustrate the power of economic analysis and transparency masters for all graphs in the text. A *Test Bank* of multiple-choice questions is available on computer disk for the IBM PC and compatibles and in booklet form.

In the accompanying study guide, *Problem Solving in Microeconomics*, Second Edition, Nancy Gallini of the University of Toronto has done a superb job of providing supplementary material that will help the student to develop a thorough understanding of microeconomics. Each chapter contains a chapter summary, case studies, a list of key words, multiple-choice questions, and true-false questions. In addition, the study guide offers a wide range of useful and fascinating real-world problems designed to teach students how to think as economists do.

How to Use This Book

We have designed this book so that a number of differentiated courses can be taught from it. Note that chapters and sections of chapters that are marked with an asterisk in the table of contents and the text can be skipped with no loss of continuity. Note, too, that the order in which this material can be assigned is often quite flexible. For example, Chapter 6 (Choice Making Under Imperfect Information) can fit neatly just after Chapter 10 (The Theory of Perfect Competition), since it deals with both competitive insurance markets and Akerlof's lemons model. Alternatively, it can be used at the very end of the course, as an introduction to a set of issues that will be covered in detail in more advanced courses. To cite one further example, Sections 8.5, 10.8, and 11.10 make up a comparative institutional package that can be taught conveniently at any point after Chapter 11.

Chapters 1 through 5 and Chapters 8 through 11 form the core of a standard one-semester course. A number of differentiated courses that build on this core are described below.

- *Nonspecialized:*
Suggested chapter assignments: 1–5, 8–11, 14–15
Optional chapter assignments: 12, 16
- *Comparative institutional analysis, or property rights:*
Suggested chapter assignments: 1–5, 7–11 (highlight Sections 2.3, 5.6, 8.5, 10.8, 11.8, 11.10)
Optional chapter assignments: 6, 13
- *Labor economics:*
Suggested chapter assignments: 1–5, 7–11, 14 (highlight Section 5.5)
Optional chapter assignment: 16
- *Consumer theory:*
Suggested chapter assignments: 1–5, 6–11, 16 (highlight Sections 3.3, 3.4, 4.10, 5.2)

On the Second Edition

Broadly speaking, the organization and content of the first edition are unchanged in the second edition. However, specific material in many chapters has been substantially reorganized, and all but four chapters have been completely rewritten. All these revisions are aimed at making the book more user-friendly for students. In addition, a number of other changes have been made in the interests of liveliness, clarity, and accessibility:

- The graphs have all been streamlined and relabeled.
- The mathematical notation has been thoroughly overhauled and simplified.
- The end-of-chapter exercises have been completely revised, and many new exercises that reinforce basic concepts have been added.
- New and up-to-date examples have been added throughout.

- Economic concepts that students typically find abstract or difficult are presented in terms of specific illustrations that are concrete and easy to understand.
- All of the general equilibrium material has been pulled together in one chapter.

Acknowledgments

We would like to thank our colleagues Judy Alexander, Larry Boland, Jack Knetsch, and Denton Marks for their many valuable comments and suggestions. Our thanks, too, to Kevin Wainwright for his assistance in developing the problems and exercises, and to George D. Brower for reworking the multiple-choice test questions. Finally, we'd like to acknowledge all the people at W. H. Freeman who have contributed so much of their time, talent, and energy to the making of the second edition, especially Gary Carlson, Cynthia Farden, Susan Landry, and Diana Siemens.

Reviewers

We would like to acknowledge all the useful suggestions and generous encouragement from our reviewers for both the first and second editions. Reviewers for the first edition include

George Borjas, University of California, Santa Barbara
 Oscar T. Brookins, Northeastern University
 Norman Clifford, University of Kansas
 William T. Dickens, University of California, Berkeley
 Joseph C. Gallo, University of Cincinnati
 Charles Geiss, University of Missouri
 Edward Greenberg, Washington University
 Richard Hofler, University of Tennessee
 Joseph Hughes, Rutgers University
 Michael Jones, Yale University
 Edward C. Kienzle, Boston College
 Anthony Y. C. Koo, Michigan State University
 Martin McGuire, University of Maryland
 Paul L. Menchik, Michigan State University
 Paul Glen Munyon, Grinnell College
 Jack Ochs, University of Pittsburgh
 William B. O'Neil, Colby College

Paul Roman, St. Louis University
William Schaffer, Georgia Institute of Technology
John Schroeter, Iowa State University
Alan Slivinski, University of Western Ontario
Paul M. Sommers, Middlebury College

Reviewers Thomas Barthold (Dartmouth), Edward Greenberg (Washington University), and Michael Morgan (College of Charleston), whose detailed and thoughtful comments at various stages were invaluable, deserve special recognition.

Reviewers for the second edition include

Arlo Biere, Kansas State University
George D. Brower, Allegheny College
Mukesh Eswaren, University of British Columbia
Larry Herman, Kenyon College
Anthony Y. C. Koo, Michigan State University
James P. Lesage, University of Toledo
Lynne Pepall, Tufts University
Malcolm Rutherford, University of Victoria
Nicolas Schmitt, Simon Fraser University
Alan Slivinski, University of Western Ontario
Roger Ware, University of Toronto
Douglas S. West, University of Alberta

We would especially like to thank Robert A. Becker (Indiana University), whose thoughtful comments were so useful in shaping this edition.

Microeconomics

Second Edition

CONTENTS

Preface	xix	1.5 Normative Economics	14
PART I AN INTRODUCTION TO MICROECONOMICS	1	Positive Versus Normative Economics	14
1 Doing Microeconomics: A Working Methodology	3	Normative Questions in the Location Model	15
1.1 The Methodology of Economic Theory	3	The Primacy of the Individual	16
1.2 Choosing the Assumptions of a Model	4	The Pareto Criterion	16
Reducing an Economic Problem to Its Simplest Form	5	Cost-Benefit Analysis	18
The Role of Self-Interested Behavior	7	Summary	19
1.3 Positive Economics	7	Exercises	20
Finding the Equilibrium of Locations	9	References	21
Self-Interest: The Engine of Economic Analysis	11	2 The Economy and Economics	22
1.4 The Evaluation of Models	11	2.1 Economics Informally Defined	22
Simplicity	11	2.2 Describing an Economy	23
Fruitfulness	11	A Resource Endowment	23
Robustness	12	A Technology	23
Testing Economic Models	14	Production Possibilities Set	23
		Economic States	24
		Preferences of Individuals	26
		Institutions	27
		2.3 Comparative Institutional Analysis	29
		A Common-Property Institution	30
		A Private-Property Institution	30

2.4 The Market Economy	32	Four-Term Consistency	50
The Circular Flow of Economic Activity	32	Existence of a Complete Preference Ordering	50
Partial Equilibrium and General Equilibrium Analysis	33	3.4 Constructing a Utility Function	50
Microeconomics Versus Macroeconomics	34	Indifference Curves	51
2.5 A Review of Supply and Demand	34	The Continuity of the Indifference Curve	51
Demand	34	Nonsatiation	52
Supply	34	The Slope of the Indifference Curve	52
Equilibrium Price and Quantity	35	The Indifference Map	53
2.6 Comparative Statics Analysis	36	Utility Function Defined	53
2.7 Equilibrium	38	Utility Numbers	54
2.8 The Plan of the Book	38	The Meaning of Utility Numbers	58
Summary	39	3.5 Trade-offs and the Marginal Rate of Substitution	58
Exercises	40	Kinked Indifference Curves	60
References	41	Convexity of Indifference Curves	60
PART II INDIVIDUAL CHOICE	43	*3.6 Many Goods	63
3 A Theory of Self-Interest: Self-Interest, Preferences, and Utility Functions	45	Summary	64
3.1 The Psychological Assumption of Self-Interest	45	Exercises	65
3.2 Individual Preferences	46	References	66
Preferences as Primitives	47	4 Getting and Spending: The Problem of Economic Choice	67
Consumption Bundles	47	4.1 Economic Choices	67
3.3 Constructing a Complete Preference Ordering	48	Choice and Scarcity: Getting and Forgoing	67
Completeness	49	Imperfect Information and Intertemporality	68
Two-Term Consistency	49	4.2 The Static Choice Problem	68
Three-Term Consistency, or Transitivity	49	Attainable Consumption Bundles	69
		Stating the Choice Problem	70
		4.3 Demand Functions: The Solution to the Choice Problem	71
		4.4 Two General Properties of Demand Functions	73

Homogeneity of Degree Zero	73	Price-Elastic and Price-Inelastic Demand	93
Engel's Aggregation Law	74	Other Elasticity Measures	95
4.5 Graphic Analysis of Utility Maximization	74	4.13 The Composite Commodity Theorem	95
Interior Solutions	74	Summary	97
Corner Solutions	76	Exercises	98
4.6 Comparative Statics Analysis of Demand	79	References	100
4.7 Consumption Response to a Change in Income	80	5 Vicarious Problem Solving: Applications of the Theory of Choice	101
Normal Goods and Inferior Goods	80	5.1 Taxation: Lump-Sum Versus Excise Taxes	101
Engel Curves	81	Excise Tax Versus Lump-Sum Tax	101
4.8 Consumption Response to a Change in Price	81	Government Subsidies	103
The Price-Consumption Path	82	An Application to the Theory of Clubs	103
The Demand Curve	82	5.2 Measuring Benefits and Costs	104
4.9 Income and Substitution Effects	83	Equivalent Variation for a New Good	105
Two Effects Associated with a Price Increase	84	Compensating Variation for a New Good	105
Two Effects Associated with a Price Decrease	85	Equivalent Variation for a Price Change	106
The Negative Substitution Effect	86	Compensating Variation for a Price Change	107
The Ambiguous Income Effect	86	Comparing Equivalent Variation and Compensating Variation	107
The Slope of the Demand Curve	86	Consumers' Surplus	107
*4.10 The Compensated Demand Curve	87	*5.3 The Demand for Consumer Capital	108
The Substitution Effect Revisited	87	5.4 Two-Part Tariffs: The Polaroid Corporation's Price Dilemma	111
The Compensated Demand Function	88	5.5 Getting and Spending Revisited: The Demand for Leisure and the Supply of Labor	114
4.11 Complements and Substitutes	90		
4.12 Measuring Comparative Statics Responses	91		
Elasticity	92		
The Point Price Elasticity of Demand	92		

Work, Leisure, and Income	114	The Expected-Utility Assumptions	134
Labor Supply	115	The Continuity Assumption	134
Consumption and the Opportunity Cost of Time	115	The Substitution Assumption	135
Time and Money Prices	115	The Ordering Assumption	136
		Constructing the Utility Function	137
		The Expected-Utility Theorem	137
*5.6 Limited Resources and the "Tragedy of the Commons"	116	6.3 Generalizing the Expected- Utility Theorem	138
Common-Property Problems	116	State-Dependent Preferences	138
Racquetball and the Tragedy of the Commons	117	Subjective Probabilities	139
First Come, First Served Alloca- tion	117	6.4 Attitudes Toward Risk	139
Excess Demand and Lineups	118	6.5 Shedding Risk	143
Institutional Mechanisms for Allocation	119	Risk Pooling	143
*5.7 Index Numbers	119	The Demand for Insurance	144
Quantity Indexes	120	The Supply of Insurance	146
Price Indexes	122	Risk Spreading	147
		The Case for Risk Aversion	147
5.8 Intertemporal Choice and Present Value	123	6.6 Some Issues in the Economics of Information	148
Mortgages	123	The Economics of Information: A Model	148
Bonds	124	Adverse Selection	148
Present Value with an Infinite Horizon	124	The Lemons Principle	150
Intertemporal Choice	124	Signaling and Screening	150
Summary	126	Unproductive Signaling	151
Exercises	126	Productive Signaling	151
