Preface

N*anobiophotonics* is designed to serve as a desktop reference for the field at the boundary between nanotechnology, photonics, and biomedicine. Although this interdisciplinary topic is of current, specialized research interest, the authors contributed preparatory material, which makes the book accessible to both students and scholars outside the field. To this end, the book consists of 16 chapters, grouped in three different parts, which reflect the progression from introductory to specialized topics. The Introduction covers the basics of cancer cell biology, electromagnetic fields and nano-optics. In the Review of Methods, the reader is exposed to a number of techniques of broad interest: tissue pathology, light scattering, second-harmonic generation, vision restoration, low-coherence interferometry, plasmonics, and metamaterials. Finally, Part III Current Research Areas cover a range of active research directions: infrared spectroscopic imaging, coherence imaging, second-harmonic imaging, plasmonics and plasmon resonance energy transfer, nanoscale red blood cell fluctuations, super-resolution microscopy, and spatial light interference microscopy.

The authors organized the 2009 Nanobiophotonics Summer School at University of Illinois at Urbana-Champaign, during the period of June 1 - June 12, 2009. The school was sponsored by the Network for Computational Nanotechnology (NCN), which is funded by the National Science Foundation.

Nanobiophotonics would not have been possible without the support from NCN and nanoHub, National Science Foundation, Beckman Institute for Advanced Science and Technology, Materials Computing Center, and Department of Electrical and Computer Engineering. Crucial in organizing the summer school were Umberto Ravaioli, Nahil Sobh, and Julie McCartney.

About the Editor

Gabriel Popescu is an assistant professor in the Department of Electrical and Computer Engineering and a full-time faculty member with the Beckman Institute for Advanced Science and Technology at the University of Illinois at Urbana–Champaign. He and his colleagues started the Nanobiophotonics Summer School at the Beckman Institute in 2009. The school was sponsored by the Network for Computational Nanotechnology (NCN), which is funded by the National Science Foundation.

Contents

Contributors	xiii
Preface	xv

Part I Introduction

1 Biology of the Cancer Cell <i>Marina Marjanovic and Krishnarao Tangella</i>	3
1.1 Cell—A Basic Unit of Life	3
1.2 Cell Cycle	4
1.3 Control of the Cell Cycle	6
1.4 Biology of a Cancer Cell	7
1.5 Molecular Biology of a Cancer Cell	12
1.6 Summary	13
Suggested Reading	13
2 Review of Electromagnetic Fields <i>Gabriel Popescu</i> ...	15
2.1 Maxwell's Equations	15
2.1.1 Maxwell's Equations in the Space- Time Representation	15
2.1.2 Boundary Conditions	16
2.1.3 Maxwell's Equations in the Space- Frequency Representation (\mathbf{r}, ω) ...	17
2.1.4 The Helmholtz Equation	18
2.1.5 Maxwell's Equations in the (\mathbf{k}, ω) Representation	19
2.1.6 Phase, Group, and Energy Velocity ...	21
2.1.7 The Fresnel Equations	23
2.1.8 Total Internal Reflection	26
2.1.9 Transmission at the Brewster Angle ...	27
2.2 The Lorentz Model of Light-Matter Interaction	29
2.2.1 From Microscopic to Macroscopic Response	29
2.2.2 Response below the Resonance $\omega \ll \omega_0$	32
2.2.3 Response at the Resonance, $\omega \approx \omega_0$...	32
2.2.4 Response above the Resonance, $\omega \gg \omega_0$	33
2.3 Drude Model of Light-Metals Interaction ...	33
Suggested Reading	35

3	Introduction to Nanophotonics	<i>Logan Liu</i>	37
3.1	Overview		37
3.2	Foundation of Nanophotonics		38
3.3	Quantum Confinement in Nanophotonics		39
3.4	Plasmonics		41
3.4.1	Optical Field Enhancement and Concentration		42
3.5	Nanophotonic Characterization with Near-Field Optics		43
3.6	Computation and Simulation in Nanophotonics		44
3.6.1	Mie Scattering Theory		45
3.6.2	Maxwell Equations		46
3.6.3	Finite Element Frequency-Domain Nanophotonic Simulation		49
3.6.4	Finite Difference Time Domain (FDTD)		52
	References		53

Part II Review of Methods

4	Tissue Pathology: A Clinical Perspective		
	<i>Krishnarao Tangella and Marina Marjanovic</i>		57
4.1	Introduction		57
4.2	Tissue Preparation		58
4.2.1	Accessioning the Specimen		58
4.2.2	Grossing in the Specimen		60
4.2.3	Frozen Sections		62
4.2.4	Specimen in Tissue Processor		64
4.2.5	Embedding of Tissue		64
4.2.6	Microtome Sectioning of Paraffin Blocks		66
4.2.7	Tissue Staining		68
4.2.8	Cytology Specimens		71
4.2.9	Special Stains		72
4.3	Pathology Report		74
4.4	Prognostic and Predictive Markers in Pathology		74
4.5	Opportunities for Biophotonics at the Nanoscale		75
4.6	Summary		77
	Acknowledgments		78
	References		78

5	Light Scattering in Inhomogeneous Media	81
	<i>Gabriel Popescu</i>	81
5.1	Elastic (Static) Light Scattering	81
5.1.1	Scattering Properties of One Dielectric Particle	81
5.1.2	Rayleigh Particles	83
5.1.3	Mie Theory	85
5.1.4	Single-Scattering Approximation for a Volume Distribution of Dielectric Particles	86
5.2	Quasi-Elastic (Dynamic) Light Scattering ...	88
5.3	Multiple Scattering	90
5.3.1	Elements of Radiative Transport Theory	91
5.3.2	Diffusion Approximation of the Transport Theory	93
5.3.3	Diffusive Wave Spectroscopy	94
	References	96
6	Theory of Second-Harmonic Generation	
	<i>Raghu Ambekar Ramachandra Rao and Kimani C. Toussaint, Jr.</i>	97
6.1	Introduction	97
6.2	Nonlinear Microscopy	98
6.3	Theory of Second-Harmonic Generation (Electromagnetics Picture)	99
6.3.1	Nonlinear Wave Equation	101
6.3.2	Second-Order Nonlinear Polarization	101
6.3.3	Determination of Second-Harmonic Generation Intensity	102
6.3.4	Nonperfect Phase Matching	105
6.3.5	Noncentrosymmetry	105
6.3.6	Quasi-Phase Matching	106
6.3.7	Phase-Matching Bandwidth	106
6.4	Theory on Second-Harmonic Generation (Dipole Picture)	107
6.4.1	Directionality	108
6.4.2	Backward Second-Harmonic Generation	109
6.4.3	Effect of Focusing	110
6.4.4	Phase Matching in Biological Tissues	110
6.5	Experimental Configuration	110
6.6	Practical Considerations	112

6.6.1	Distinguishing SHG	112
6.6.2	Resolution and Penetration Depth	112
6.6.3	Power Limitations	112
6.6.4	Advantages and Disadvantages of SHG	113
6.7	Conclusion	113
	Acknowledgments	114
	References	114

7 Vision Restoration in the Nanobiophotonic Era

<i>S. Sayegh</i>		115
7.1	Introduction	115
7.2	Light at Multiple Levels	116
7.2.1	Ray Optics, Wave Optics, and Quantum Optics	116
7.3	Vision	118
7.3.1	Visual Acuity	118
7.3.2	Definition(s) of Blindness (Legally Blind and Legally Drive)	118
7.3.3	Causes of Blindness: What It Takes to See ... and Not	119
7.3.4	Brief Introduction to the Anatomy of the Eye	120
7.4.	The Size of Things	120
7.4.1	The Eye	120
7.4.2	Cornea	121
7.4.3	Example: Lens	122
7.4.4	Example: Retina	123
7.4.5	Optic Nerve	124
7.5	Failure of Visual Requirements Resulting in Blindness	124
7.5.1	Failure of Transparency	124
7.5.2	Failure of Bending or Focusing	125
7.5.3	Failure of Detection	125
7.5.4	Failure of Conduction	126
7.5.5	Failure of Processing	126
7.6	Diagnostic Tools	126
7.7	Therapeutic Tools	129
7.7.1	Therapeutic Tools (Optical)	129
7.7.2	Therapeutic Tools (Medical)	130
7.7.3	Therapeutic Tools (Surgical)	131
7.8	Summary	137
	Suggested Reading	137

8	Optical Low-Coherence Interferometric Techniques for Applications in Nanomedicine	
	<i>Utkarsh Sharma and Stephen A. Boppart</i>	139
8.1	Introduction	139
8.1.1	Origin and Evolution of OCT Technology	140
8.1.2	Applications in Medicine	141
8.1.3	Applications in Nanomedicine	141
8.2	Basic Theoretical Aspects of Low-Coherence Interferometry	143
8.2.1	OCT Theory	144
8.2.2	Spectral-Domain OCT	146
8.2.3	Axial and Lateral Resolution	147
8.2.4	SNR, Noise, and Sensitivity in OCT Systems	148
8.3	Functional Extensions of OCT and Other LCI-Based Techniques for Applications in Nanomedicine	149
8.3.1	Gold Nanoshells and Nanostructures as Contrast and Therapeutic Agents	150
8.3.2	Spectroscopic OCT	151
8.3.3	Magnetomotive OCT	152
8.3.4	Ultrahigh-Resolution OCT for Subcellular Imaging	154
8.3.5	Phase-Sensitive LCI Techniques for Monitoring Cellular Dynamics	156
8.3.6	Polarization-Sensitive OCT	159
8.3.7	Molecular-Specific LCI-Based Techniques: Pump-Probe OCT and Nonlinear Interferometric Vibrational Imaging	160
8.4	Conclusion	162
	Acknowledgments	163
	References	163
9	Plasmonics and Metamaterials	
	<i>Kin Hung Fung and Nicholas X. Fang</i>	173
9.1	Introduction	173
9.2	Surface Plasmon	178
9.3	Design of Metamaterials	182
9.3.1	Concept of Effective Medium	182
9.3.2	Effective Electric Permittivity (ϵ_{eff})	185
9.3.3	Effective Magnetic Permeability (μ_{eff})	187
9.3.4	Double Negativity	189

9.4	Imaging and Lithography: Breaking the Diffraction Limit	191
9.4.1	Thin-Film Superlens	191
9.4.2	Hyperlens	192
9.5	Outlook	194
9.6	Conclusion	194
	References	195

Part III Current Research Areas

10	Infrared Spectroscopic Imaging: An Integrative Approach to Pathology <i>Michael J. Walsh and Rohit Bhargava</i>	201
10.1	Introduction	201
10.1.1	Cancer Pathology	202
10.1.2	Current Practices in Pathology	203
10.1.3	Molecular Pathology	205
10.2	FTIR Spectroscopy	205
10.2.1	Point Spectroscopy and Imaging ...	205
10.2.2	FTIR and Molecular Pathology	206
10.2.3	Comparison with Other (Spectral) Imaging Techniques	208
10.2.4	Progress in Instrumentation	209
10.3	Applications of FTIR in Biomedical Research	211
10.3.1	2D Cell Culture	211
10.3.2	3D Tissue Culture	212
10.3.3	Clinical Applications of FTIR	214
10.4	Translation of FTIR Imaging into Routine Use in Routine Clinical Pathology	220
10.4.1	Clinical Considerations	220
10.4.2	Spectroscopic Considerations	220
10.4.3	Translation of FTIR Imaging to Clinic	221
