Guide to Antibiotic Use

in dental practice

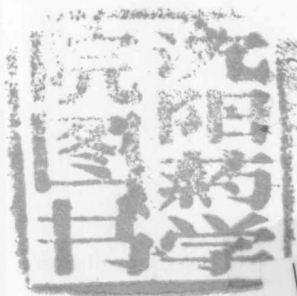

Edited by

Michael G. Newman, D.D.S.

Adjunct Professor, Section of Periodontics
School of Dentistry
University of California Medical Center
Los Angeles, California

Anthony D. Goodman, D.D.S., M.Sc.D.

Lecturer, Section of Endodontics
School of Dentistry
University of California Medical Center
Assistant Clinical Professor of Microbiology and Immunology
University of Southern California School of Dentistry
Los Angeles, California

Quintessence Publishing Co. Inc. 1984
Chicago, Berlin, London, Tokyo, and Rio de Janeiro

Cover design

Growth of infection and introduction of antibiotic to cure it

Library of Congress Cataloging in Publication Data

Main entry under title:

Guide to antibiotic use in dental practice.

Includes index.

1. Antibiotics. 2. Materia medica, Dental. I. Newman, Michael G. II. Goodman, Anthony D. [DNLM: 1. Antibiotics—Therapeutic use. 2. Antibiotics—Adverse effects. 3. Mouth diseases—Drug therapy. 4. Tooth diseases—Drug therapy. WU 140 G946]

RK715.A58G85 1984 617.6/061 84-3432

Nature understands no jesting; she is always true, always serious, always severe; she is always right, and the errors and faults are always those of man. The man incapable of appreciating her she despises and only to the apt, the pure, and the true, does she resign herself and reveal her secrets.

—Goethe

Part 1

GENERAL PRINCIPLES

Orofacial Infections and Antibiotic Management *Crawford*

Drugs of Choice *Goodman, Newman*

Topical Antibacterial Agents in Dentistry *Kornman*

Testing Antimicrobial Susceptibility *Sutter*

Taking and Delivering a Culture for Testing *Crawford*

Part 2

ADVERSE REACTIONS

Allergic and Other Sensitivity Reactions *Mibalas*

Antibiotic-Induced Colitis and Diarrhea *Hammill*

Adverse Microbiological Effects *Newman, Goodman*

Part 3

CLINICAL CONSIDERATIONS

Antibiotics in Periodontal Therapy *Ciancio*

Antibiotics in Endodontic Therapy *Goodman*

Antibiotics for Oral and Maxillofacial Infections *Triege*

Pediatric Considerations *Lindemann*

Part 4

SPECIAL CONSIDERATIONS

Prophylactic Antibiotic Use *Sonis*

Systemic Considerations for Female Patients *Hammill*

Considerations for Cancer Patients *Sonis*

Legal Considerations *Zinman*

Contents

Contributors 18

Foreword 21

Introduction 22

GENERAL PRINCIPLES Part 1

CHAPTER 1

Orofacial Infections and Antibiotic Management *Crawford* 25

Infections of the orofacial tissue 25

How they begin The body's response

Types of infection 26

Internal infections Mandibular infections Maxillary infections

Superficial infections

Types of bacteria in pyogenic orofacial infections 27

Anaerobic mixtures

Infection management 33

Drainage and debridement The function of antibiotics Patient monitoring

The decision to use antibiotic therapy 33

Accounting for the risks

Indications that antibiotics are needed

Symptoms not needing antibiotic therapy

Culture taking and susceptibility testing Therapy should not be delayed

Choosing the antibiotic therapy Drug Dosage Duration

Why antibiotic therapy may fail

Common errors in antibiotic therapy

Points to remember

Table 1.1 **Bacteria in odontogenic and oral infections** 28

Table 1.2 **Frequency of bacteria in oral infections** 29

Table 1.3 **Organisms in acute orofacial infections** 30

CHAPTER 2

Drugs of Choice *Goodman, Newman* 39

No longer a simple choice Matching pharmacology with microbiology

The penicillins 40

Penicillin G (benzyl penicillin) Absorption Distribution Excretion Mode of action Adverse effects General indications Spectrum**Penicillin V (phenoxymethyl penicillin)****Ampicillin** Bacampicillin**Penicillinase-resistant penicillins** Methicillin Cloxacillin and dicloxacillin**Recommendation summary: the penicillins**

The nonpenicillins 46

Cephalexin Description Absorption Distribution Excretion Mode of action Adverse effects Spectrum Recommendation**Clindamycin** Description Absorption Distribution Excretion Mode of action Adverse effects Indications and spectrum Discussion Recommendation**Erythromycin** Description Absorption Distribution Excretion Mode of action Adverse effects Indications and spectrum Discussion Recommendation**Tetracyclines** Description Absorption Distribution Excretion Mode of action Adverse effects Spectrum Discussion Recommendation**Metronidazole** Description Absorption Distribution Excretion Mode of action Adverse effects Indications Spectrum Recommendation**Nystatin** Description Absorption Mode of action Adverse effects Indications Discussion Recommendation

Summary of recommendations 53

Which drug to use**What the patient needs to know**Table 2.1 **Types of bacteria in dental infections** 40Table 2.2 **Pharmacokinetics of common antibiotics** 42Table 2.3 **Average doses recommended for adults** 54Table 2.4 **Average doses recommended for children** 55

CHAPTER 3

Topical Antibacterial Agents in Dentistry *Kornman* 58

Why use topical antimicrobials? 58

Benefits over systemic drugs Limited use Uses Treatment goals

Topical plaque reduction 60

Development Qualities of effective agents

Enzymes Cationic Nonionic**Chlorhexidine** Alexidine

	Fluorides	Effectiveness	Stannous fluoride	Other beneficial effects
	Summary			
Treatment of specific bacteria	63			
	Topical treatment of caries	Against specific bacteria	Fluoride	
	Topical treatment of periodontal diseases	Benefits	Treatment goal	
	Nonantibiotic agents	Treatment summary		
	Summary: caries and periodontal disease			
Table 3.1	Topical antibacterial therapy	58		
Table 3.2	Treatment approaches for caries reduction	59		
Table 3.3	Topical agents for plaque control	63		
Table 3.4	Topical fluoride for treating rampant caries	65		

CHAPTER 4

Testing Antimicrobial Susceptibility *Sutter* 68

	Degrees of susceptibility	
Measuring inhibition by drugs	68	
	Types of data	
	In vitro limitations	
Types of susceptibility tests	69	
	Diffusion tests	For qualitative data Method Indications Interpretation of results For antifungal agents
	Dilution tests	For quantitative data Methods Indications Interpretation of results
Factors influencing results	72	
	Inoculum Medium Incubation Antibiotic diffusion	
Using test results	73	
Table 4.1	Peak serum concentrations of antibiotics	71
Table 4.2	Factors affecting susceptibility test results	72
Table 4.3	MICs for 90% of anaerobic isolates	74
Table 4.4	MICs for 90% of selected oral isolates	75

CHAPTER 5

Taking and Delivering a Culture for Testing *Crawford* 78

	The value of testing	
Obtaining adequate data	78	
	The dentist's role in communication	Problems caused by mixed flora Testing against specific antibiotics
Guidelines for collection and submission of specimens	79	

Procedures Supplies

Sampling submucosal lesions Exudate from closed lesions or abscesses

Exudate from draining lesions or abscesses Tissue samples

Sampling surface mucosal lesions

Examination for *Actinomyces*

ADVERSE REACTIONS Part 2

CHAPTER 6

Allergic and Other Sensitivity Reactions *Mihalas* 84

Advances in knowledge Allergy vs. immunity

Elements of the immune response 84

Antibodies and allergens

Inflammation

Immunoglobulins

Specialized cells Lymphocytes, macrophages, and lymphokines Basophils and mast cells Eosinophils and leukocytes

Types of immunologic responses 86

Sensitive vs. allergic Types of cellular reactions: overview

Type 1: immediate hypersensitivity Symptoms Agents

Type 2: cytotoxic reactions Reaction Mechanisms

Type 3: immune complex reactions Reaction Symptoms Agents

Type 4: delayed hypersensitivity Reaction Agents

Immunologic reactions to drugs: overview 88

Incidence

Examples of common drug reactions Clinical vs. pharmacological effects

Prior exposure

Heredity

Sensitivity testing 89

Inconsistent reliability Consultation with a specialist

Reliable tests

Types of tests

Penicillin hypersensitivity 90

Incidence

Determinants

Manifestations Skin eruptions Anaphylaxis Type 3 reactions

Cessation of symptoms

Cautions

Diagnosis with skin testing Detection of determinants Interpretation of results

When to test

Emergency allergic reactions 92
 Triggers Manifestations

Emergency treatment of anaphylaxis 93
 Airway and breathing Recommended agents
 Other symptoms Recommended agents
 Summary

Nonimmunologic drug reactions 94
 Causes of toxic side effects Overdose Immunosuppressor drugs Drug interactions Nicotine Disease Genetic defects
 Symptoms mimicking allergy Jarisch-Herxheimer reaction Rash Idiosyncratic reactions
 Drug withdrawal Symptoms Oral steroids

Table 6.1 **Types of hypersensitivity** 86
Table 6.2 **Emergency treatment of allergic reaction** 94
Table 6.3 **Common drug interactions** 96

CHAPTER 7

Antibiotic-Induced Colitis and Diarrhea *Hammill* 99

Types
Etiology Antibiotic causes Frequency
Symptoms
Treatment
Prophylaxis

Table 7.1 **Features of pseudomembranous colitis** 100

CHAPTER 8

Adverse Microbiological Effects *Newman, Goodman* 102

Development of bacterial resistance 102
 Mechanisms through which resistance can arise

Superinfection 103
 Depression of normal organisms Symptoms
 Candidiasis Treatment

Conclusions 104

Table 8.1 **Symptoms of adverse microbiological effects** 103

CLINICAL CONSIDERATIONS Part 3

CHAPTER 9

Antibiotics in Periodontal Therapy *Ciancio* 106

Overview 106

Limited use of antibiotics When to use antibiotics Microbiology

Gingivitis and plaque 107

Effectiveness of antibiotics Research with specific antibiotics

Topical vs. systemic

Periodontitis 108

When to use antibiotics Factors in choice of antibiotic

Tetracyclines Benefits Types best suited In mixtures

Metronidazole

Periodontal dressings 111

Hollow fiber devices 111

Table 9.1 **Periodontal disease: etiologies and antibiotics** 107

Table 9.2 **Response of periodontium to antimicrobials: animals** 109

Table 9.3 **Response of periodontium to antimicrobials: humans** 110

CHAPTER 10

Antibiotics in Endodontic Therapy *Goodman* 114

Periapical infection 114

Indications

Immediate treatment: draining To avoid recurrence and pain

Which patients require antibiotics? 115

Heart patients Compromised patients Patients showing systemic signs of infection

Antibiotic treatment based on microbiology 116

Classes of organisms present Anaerobes Past error Current assessment

Specific bacteria: the literature Crawford, 1974 Schein, 1975 Sundqvist, 1976

Goodman, 1977 Chow, 1978 Bartlett, 1979 Brook, 1981 Gorbach, 1982

Entry and access of bacteria Direct extension Anachoresis Pulpal injury

Drugs for empirical therapy Primary drugs—serious infections Penicillin allergy/penicillin failure Primary drugs—nonserious infections

Therapy evaluation: sampling 120

Indications for collecting a bacterial specimen

Sampling procedure Rubber dam isolation Minimizing exposure to oxygen

Why Stuart's Transport Solution?

Processing samples

Interpretation of results

Table 10.1 **Spectra of bacteria in dental infections** 117

CHAPTER 11

Antibiotics for Oral and Maxillofacial Infections *Trieger* 124

Overview 124

Locating signs of infection Fluctuance

Treatment Overview For fluctuance Incision into the fluctuant area Venting through the root canal Extraction of the tooth

Orofacial infection pathways 125

Mandibular teeth Drainage Masticator space Ludwig's angina

Maxillary teeth

Sinusitis Causes Treatment

Bacteriology of oral and maxillofacial infections 127

Research: mixed flora Odontogenic infections

Perimandibular space infections Oral surgical infections Sinusitis

Resistance to penicillin Altering the infection ecosystem

Selection of antibiotics 129

Penicillin for most

Penicillin resistance

If side effects occur

Penicillin-allergic patients Prophylactic treatment

Trauma and elective surgery 130

Prophylactic antibiotic treatment: special cases

Nonantibiotic procedures

Osteomyelitis 131

Antibiotic treatment Cultures to identify bacteria Osteoradionecrosis

The dry socket 131

Diagnosis

Microbiology

Local treatment Methods and effectiveness Topical antibiotics

Salivary gland infections 133

Antibiotic treatment

Drainage

Mumps: a special case

Supportive care of dento-alveolar infections 133

Treatment of associated symptoms

Cases needing further evaluation

Table 11.1 **Quayle's criteria for identifying *Bacteroides*** 128

CHAPTER 12

Pediatric Considerations *Lindemann* 136

Qualities of the young patient 136

Cognition Metabolism Microflora

Pediatric antibiotic therapy: indications and treatment 137

Acute odontogenic infections Dangers Penicillin Penicillin allergy Periapical abscess Severe infections**Chemoprophylaxis** Bacteremia AHA guidelines Resistance**Periodontal disease****Trauma**

Special considerations 139

Problems swallowing pills Noncompliance Childhood systemic diseases Chronic systemic disease Tetracycline staining

Table 12.1 **Average doses recommended for children** 138**SPECIAL CONSIDERATIONS** Part 4

CHAPTER 13

Prophylactic Antibiotic Use *Sonis* 144**Bacteremia leading to colonization** Dental causes of bacteremia Colonization

Subacute (infective) bacterial endocarditis 144

Etiology Patients susceptible

Premedication Penicillin Penicillin-allergic patients**High-risk patients****When to premedicate**

Renal disease 147

Hemodialysis**Renal transplant**

Joint prostheses 148

Premedication for joint prosthesis

Other diseases 148

Diminished capacity to fight infection Determining need

Table 13.1 **Heart conditions requiring antibiotic prophylaxis** 145Table 13.2 **Protection from bacterial endocarditis** 146

CHAPTER 14

Systemic Considerations for Female Patients *Hammill* 151

- Vaginitis**
- Contraceptive failure**
- The pregnant or nursing patient 152
 - Penicillin**
 - Aminoglycosides**
 - Sulfonamides**
 - Erythromycin**
 - Tetracycline**
 - Cephalosporins**
 - Clindamycin**
 - Chloramphenicol**
 - Metronidazole**
 - Summary: the benefits outweigh the risks**

Table 14.1 **Risks of antibiotic use in women** 152

CHAPTER 15

Considerations for Cancer Patients *Sonis* 156

- Effects of chemotherapy on antibiotic therapy 156
 - Oral mucosa integrity Myelosuppression Change in oral bacterial flora
- Oral infection in the myelosuppressed 157
 - Indications Treatment Antibiotics
- Oral fungal infections in cancer patients 159
 - Prophylaxis for candidiasis Treatment of oral fungal infections
- Effects of radiotherapy 160
 - Osteoradionecrosis Prophylaxis for surgery

Table 15.1 **Infection sites in granulocytopenic patients** 158

CHAPTER 16

Legal Considerations *Zinman* 162

- Fiduciary responsibility 162
 - Customary vs. prudent practice** Prudent practice Customary practice
 - Negligent custom
 - Alternate methods of treatment** Majority vs. minority methods Foreseeable risk
 - Duty to refer to a specialist**
 - Duty to obtain medical history**
