Biogas Technology, Transfer and Diffusion: State of the Art

PREFACE

The International Conference on the State of the Art on Biogas Technology, Transfer and Diffusion was held in Cairo, Egypt, from 17 to 24 November 1984.

The Conference was organized by the Egyptian Academy of Scientific Research and Technology (ASRT), the Egyptian National Research Centre (NRC), the Bioenergy Systems and Technology project (BST) of the US Agency for International Development (US/AID) Office of Energy, and the National Academy of Sciences (NAS). A number of international organizations and agencies co-sponsored the Conference. More than 100 participants from 40 countries attended.

The purpose of the Conference was to assess the viability of biogas technology (BGT) and propose future courses of action for exploiting BGT prospects to the fullest extent.

The Conference emphasized a balanced coverage of technical, environmental, social, economic and organizational aspects relevant to biogas systems design, operation and diffusion. It was organized to incorporate experiences that are pertinent, for the most part, to developing countries. In addition to the wide spectrum of presentations and country programs, structured and non-structured discussions among the participants were strongly encouraged in thematic sessions at round-table discussions, and through personal contacts during poster sessions and field trips. It was clear from the enthusiastic response of most participants that the Conference, in large measure, succeeded in fulfilling its mission. Although draft papers were distributed to all participants, it was felt that the results obtained were worthy of organized and refined documentation. And this is precisely what this book intends to do.

One of the important goals of the Cairo Conference was to identify a set of guiding principles for the most promising future investment opportunities relevant to BGT in developing countries. Evidence presented

at the Conference seems to indicate that BGT can be applied with the expectation of success when, for instance:

- Its potential is extended beyond the renewable energy base by better demonstrating the system multiple outputs of prospective market value including sanitation, energy, fertilizer and animal feed supplements.
- It is used as an adjunct to agricultural-processing enterprises such as relatively large animal/animal product operations.
- Its application can affect management improvement in an existing activity with resultant economic payoffs. The required institutional and financial support for successful applications of these technologies is more often available at the commercial or cooperative enterprise scale than in support of smaller-scale operations. Developing such infrastructure at the smaller scale requires considerable government involvement and long periods of time to mature and would therefore be prohibitively difficult and expensive.

Throughout the pre- and post-Conference periods, many persons contributed much effort, help and support. I am greatly indebted to each of them. In particular, my special thanks go to those of the staff of the Pilot Plant Laboratory of the NRC who extended their unlimited assistance under the capable leadership of Dr A. Abdel Dayem and Dr M. A. Hamad; to Dr Paul Weatherly, Mrs Betsy Amin-Arsala and other members of the BST staff; to Mr Jay Davenport, Mr A. Nasmith, Mrs Maryalice Risdon and Miss F. R. Ruskin of the US National Academy of Sciences (NAS); to the NAS biogas project panel: Dr P. Goodrich from the University of Minnesota, Dr H. Capener from Cornell University, and Dr T. Prakasam from the Metropolitan Sanitary District of Greater Chicago; to Dr D. C. Stuckey from Imperial College, London, and Dr R. Mah from the University of California, Los Angeles. Finally, I should like to express my profound appreciation to Dr M. Kamel, President of the Egyptian Academy of Scientific Research and Technology and former President of the Egyptian NRC, for all his support and encouragement.

M. M. EL-HALWAGI
Editor and Conference Organizer

CONTENTS

<i>Preface</i>	v
--------------------------	---

Section 1: Introduction and Summary

Introduction <i>M. M. El-Halwagi</i>	2
Executive Summary	5

Section 2: General Topics (the Opening Session)

Session Overview <i>M. Risdon</i>	14
Biogas: A Global Perspective <i>D. C. Stuckey</i>	18
The Realistic Potential of Biogas <i>V. Smil</i>	45
Force-Field Analysis of Biogas Systems and Proposed Means for Optimizing their Prospects <i>M. M. El-Halwagi</i>	51
Information Needs for Diffusing Biogas Technology into the Rural Areas of Developing Countries <i>T. B. S. Prakasam, N. L. Brown and C. Lue Hing</i>	57
The Integrated Digester Plant <i>G. L. Chan</i>	63

Section 3: Sociocultural Aspects of Biogas Technology

Overview of the Thematic Session and Key Results	65
Social, Ecological, and Cultural Realities of Biogas Development <i>H. R. Capener and M. M. El-Halwagi</i>	71
Technical and Social Problems for the Propagation of Biogas in Rwanda <i>W. E. Edelman</i>	87
Towards Obtaining Optimum Benefits from Biogas Technology . . . <i>M. Amaratunga</i>	98

Section 4: Economic Aspects

Section Overview	104
A Critique on Cost-Benefit Analysis of Biogas Programs <i>T. K. Moulik</i>	106
Assessment of the Feasibility of Rural Biogas Systems <i>M. M. El-Halwagi</i>	111
Analysis of Economic Factors in the Dissemination of Biogas Plants—Case Studies from Africa and the Caribbean <i>P. Pluschke</i>	120
The Economics of Biogas Systems—A Shorter Communication . . . <i>M. M. Lau-Wong</i>	132

Section 5: Institutional and Financial Infrastructure

Institutional and Financial Infrastructure of Biogas Systems <i>H. D. Steingass and W. P. Weatherly</i>	135
Summary of Group Discussions on Institutional and Financial Infrastructure of Biogas Systems	142

Section 6: Regional Programs, Networks, and Aid Agencies

Section Overview	149
Experiences with Rural Biodigesters in Latin America <i>R. Caceres and B. Chilibingua</i>	150
ICAITI's Dissemination Activities of Biogas Systems <i>W. L. Ingram, Jr.</i>	166
GATE-Biogas Consultancy Service	171
FAO Activities in the Field of Biogas	173
The Bioenergy Users' Network (BUN): An Executive Summary	175

Section 7: Technical Aspects

Engineering Designs

Engineering Design of Biogas Units for Developing Countries <i>R. F. Ward</i>	178
Technologies for Biogas Production of Developed Countries and Possibilities of Transferring them to Developing Countries <i>W. E. Edelmann</i>	204
Engineering Aspects of Small-Scale Biogas Plants <i>L. Sasse</i>	213
Design Parameters Affecting Success and Failure of Biogas Systems <i>M. A. Hamad, A. M. Abdel Dayem and M. M. El-Halwagi</i>	228
Preliminary Assessment of a Farm-Scale Digester in Relation to Possibilities of Operating an Integrated Bioplex System <i>D. Bellamy, P. C. Downing and B. I. Wheatley</i>	241
An Improved Plug-Flow Design for the Anaerobic Digestion of Dairy Cattle Waste <i>A. Tilche, F. De Poli, L. Ercoli, O. Tesini, L. Cortellini and S. Piccinini</i>	259

Multicriteria Optimization Design of Methane Fermentation Systems	270
<i>R. Chamy, S. Videla and E. Navarrete</i>	
A Village Scale Biogas Pilot Plant Study Using High Rate Digester Technology	277
<i>S. K. Vyas</i>	
Compost-Heated Small-Scale Farm Digester Appropriate for Korean Conditions	283
<i>C. J. Hong</i>	
Structural Behaviour and Stress Conditions of Fixed Dome Type of Biogas Units	295
<i>M. Amaratunga</i>	
Ferrocement Gasholder for Two 60 m ³ Digesters	302
<i>G. Frettlöh</i>	
Simplified Anaerobic Digesters for Animal Waste	306
<i>P. Balsari, P. Bonfanti, E. Bozza and F. Sangiorgi</i>	
Cold Condition Biogas	317
<i>S. B. Pradhan</i>	
A Modified Anaerobic Fermenter for Egyptian Agricultural Residues	322
<i>A. Z. Ebrahim</i>	
Modular Biogas Plant Particularly Adapted to Tropical Rural Areas: A Shorter Communication	333
<i>D. Compagnion, D. Rolot, H. P. Naveau, E. J. Nyns, V. Baratakanwa, D. Nditabiriye, J. Ndayishimiye and P. Niyimbona</i>	
<i>Gas-Use Devices</i>	
Overview	336
Mechanical and Electrical Power from Biogas in Developing Countries	337
<i>D. B. Mahin</i>	

Performance of a Small Diesel Engine Operating in a Dual Fuel Mode with Biogas	343
<i>K. von Mitzlaff and M. H. Mkumbwa</i>	
<i>Bioconversion and Experience in Using Alternative Raw Materials</i>	
Microbiology and Biochemistry of Methanogenesis, A Selected Review	356
<i>R. A. Mah</i>	
Methane Production from Farm Wastes	372
<i>S. Ghosh</i>	
Optimization of Bioconversion of Solid and Liquid Residues	381
<i>M. J. T. Carrondo, I. Coutinho, J. Lampreia, J. LeGall, A. R. Lino, I. Moura, J. J. G. Moura, M. A. M. Reis, M. Teixeira and A. V. Xavier</i>	
Study of the Optimum Operating Conditions for the Anaerobic Digestion of Some Organic Wastes	392
<i>S. I. El-Shawarby, N. A. Shabaan, F. El-Gohary and M. M. El-Halwagi</i>	
Novel Processes for High-Efficiency Biodigestion of Particulate Feeds	400
<i>S. Ghosh</i>	
Biogas from Organic Waste Diluted with Seawater	417
<i>H. Gamal-El-Din</i>	
The Assessment of Methanogens by the Quantitative Determination of Coenzyme F ₄₂₀ in Anaerobic Systems	424
<i>M. E. Abdel-Samie</i>	
Fuel Gas Production from Organic Wastes by Low Capital Cost Batch Digestion	429
<i>D. L. Wise, A. P. Leuschner, R. L. Wentworth and M. A. Sharaf</i>	
Biogas Production from Water Hyacinth (<i>Eichhornia crassipes</i>): Influence of Temperature	437
<i>H. B. El Amin and H. A. Dirar</i>	

Anaerobic Digestion of Organic Fraction of Garbage: A Pilot Plant <i>F. De Poli, F. Cecchi, P. G. Traverso, F. Avezzu and P. Cescon</i>	446
The Toxicity Effect of Pesticides and Herbicides on the Anaerobic Digestion Process <i>F. A. El-Gohary, F. A. Nasr and O. A. Aly</i>	454
Biogas Production from Some Organic Wastes <i>H. Gamal-El-Din, A. El-Bassel and M. El-Badry</i>	463
The Assessment of Cellulolytic Activities in Anaerobic Digesters by the 'Textiles Coupon Technique' <i>M. E. Abdel-Samie and M. N. Mahmoud</i>	474
Biogas Production from Antibiotic-Contaminated Cow Manure <i>H. Gamal-El-Din</i>	480
Biogas from Liquid Agroindustrial Wastes Derived from Banana and Coffee Processing <i>J. F. Calzada, C. Rolz and M. C. Arriola</i>	488
A Simple, Rapid and Accurate Method for Determination of Carbon Dioxide in Biogas <i>A. Ellegard and H. Egnéus</i>	494
<i>Use of Digested Materials</i>	
Assessment of Anaerobically Digested Slurry as a Fertilizer and Soil Conditioner <i>H. Moawad, L. I. Zohdy, S. M. S. Badr El-Din, M. A. Khalafallah and H. K. Abdel-Maksoud</i>	499
Repeated Application of Aerobically Digested Slurry and its Effect on the Yield and NPK Uptake of Wheat, Turnips and Onion Plants <i>L. I. Zohdy, R. A. Abd El-Aziz, M. H. Enany, A. S. Turkey and S. M. A. Radwan</i>	520
Biogas Manure as a Complete Fertilizer, Feasibility for Egyptian Farmers <i>M. N. Alaa El-Din, I. M. Abdel Aziz, M. H. Mahmoud and S. A. El-Shimi</i>	529

Control of Pathogens

Health Risks Associated with the Use of Biogas Slurry: An Introductory Note	552
<i>M. A. Tawfik</i>	

Incidence, Persistence, and Control of Parasitic Eggs and Cysts in Anaerobically Digested Wastes	554
<i>M. A. Tawfik, M. A. Hassanain and N. Sh. Deghidly</i>	

Incidence, Persistence, and Control of Some Pathogens During Anaerobic Digestion of Organic Wastes	561
