Acknowledgments

My parents and my brother and sisters have been a strong support to me through the long hours that went into completing this book. They helped me bring out the best in the book. My heartfelt gratitude goes to my parents for their support.

My project manager, Anita Sastry, has worked tirelessly, reviewing and giving her valuable input to the book. Without her support, the book would not have become what it is.

Thank you, Cathleen Snyder, for editing the book so well. Your valuable input has made this a wonderful book that reads very well.

I would also like to thank Stacy Hiquet for making this book happen in the first place! You provided active support in all development stages of the book.

My special thanks also go out to Sai Kishore, Kuljit Kaur, Surbhi Malhotra, Ambika Trehana, Geetanjali Arora, Yesh Singhal, and Ashok Appu for their support and input for some important chapters of the book.

About NIIT

NIIT is a Global IT Solutions Corporation with a presence in 38 countries. With its unique business model and technology creation capabilities, NIIT delivers Software and Learning Solutions to more than 1000 clients around the world.

The success of NIIT's training solutions lies in its unique approach to education. NIIT's Knowledge Solutions Business conceives, researches, and develops all of the course material. A rigorous instructional design methodology is followed to create engaging and compelling course content. NIIT has one of the largest learning-material development facilities in the world, with more than 5000 person-years of experience.

NIIT trains over 200,000 executives and learners each year in Information Technology areas, using Stand-up training, video-aided instruction, computer-based training (CBT) and Internet-based training (IBT). NIIT has been featured in the Guinness Book of World Records for the largest number of learners trained in one year!

NIIT has developed over 10,000 hours of instructor-led training (ILT) and over 3000 hours of Internet-based training and computer-based training. IDC ranked NIIT among the Top 15 IT training providers globally for the year 2000. Through the innovative use of training methods and its commitment to research and development, NIIT has been in the forefront of computer education and training for the past 20 years.

Quality has been the prime focus at NIIT. Most of the processes are ISO-9001 certified. NIIT was the 12th company in the world to be assessed at Level 5 of SEI-CMM. NIIT's Content (Learning Material) Development facility is the first in the world to be assessed at this highest maturity level. NIIT has strategic partnerships with companies such as Computer Associates, IBM, Microsoft, Oracle, and Sun Microsystems.

About the Author

NITIN PANDEY works as a Consultant with NIIT. In his two years of work experience at NIIT, he has authored several books, which include *Commerce Server 2000 Configuration and Administration*, *Visual Studio .NET for Dummies*, and *C# Professional Projects*.

At NIIT, Nitin has been a SME (*Subject Matter Expert*) for seminars and WBTs developed for Microsoft. He has also actively worked on all languages of the .NET Framework, Visual Studio .NET, and .NET Enterprise Servers.

When he is not at work, Nitin enjoys reading and playing volleyball.

Introduction

ASP (Active Server Pages) has long been used as a Web programming language for creating dynamic Web sites. ASP.NET is the next version of ASP 3.0, and it simplifies the development of ASP applications for the Internet. ASP.NET forms an important component of Microsoft's .NET initiative.

With the release of Visual Studio .NET, creating ASP.NET applications has become very simple. Visual Studio .NET provides all of the necessary tools and support for creating ASP.NET applications. The easy-to-use interface of Visual Studio .NET coupled with the power of ASP.NET makes programming Web applications an easy and interesting experience.

ASP.NET Fast & Easy Web Development equips you with the necessary skills to create ASP.NET applications. The characteristic visual emphasis of the book introduces ASP, Visual Basic .NET, and ADO.NET concepts to novice developers. These concepts help you get started with ASP.NET. Thereafter, the book delves into the advanced features of ASP.NET, which include validating user input; developing user controls and composite controls; reading XML data; creating XML Web services; managing, retrieving, formatting, and displaying data using ADO.NET data objects; and creating and implementing Web services.

Who Should Read This Book

Readers who are proficient in HTML and have some experience in Web programming can best utilize this book. You will probably benefit more from the book if you have worked on a scripting language before. After reading this book, you will be

proficient in ASP.NET and able to create high-performance dynamic Web sites. If this is your expectation, then this book is certainly for you!

Although the book builds from very elementary concepts, it delves into fairly advanced topics that provide valuable information to both novice and expert developers. If you have already programmed in one or more of the .NET languages, you might want to skip the first five chapters of the book, which lay the foundation for novice developers.

Added Advice to Make You a Pro

To benefit as much as possible from this book, you should download the code for the sample application that is available at <http://www.premierpressbooks.com/downloads.asp>. The sample application runs through all of the important chapters of the book, with each chapter building on the application in some way. Therefore, as you read the book, you will have a professional application ready to use.

After you read this book, your next objective should be to create an application that is similar to (or even more advanced than) the application developed in this book. This will give you adequate hands-on practice in creating ASP.NET applications. You should also regularly visit some of the useful Web sites on ASP.NET that I have listed in Appendix D, "Online Resources for ASP.NET." These Web sites provide the latest information on the developments in ASP.NET.

Conventions Used in This Book

In the book, you will find several special elements that will make using this book easier.

- Tips give you helpful information or shortcuts to accomplish a goal more quickly or easily.
- Notes provide you with additional information or background about a given topic.
- Cautions warn you of potential pitfalls or glitches in an application or procedure.
