## IDENTITY, COMMUNITY, AND LEARNING LIVES IN THE DIGITAL AGE

Recent work on education, identity and community has expanded the intellectual boundaries of learning research. From home-based studies examining youth experiences with technology, to forms of entrepreneurial learning in informal settings, to communities of participation in the workplace, family, community, trade union and school, research has attempted to describe and theorize the meaning and nature of learning. *Identity, Community, and Learning Lives in the Digital Age* offers a systematic reflection on these studies, exploring how learning can be characterised across a range of 'whole-life' experiences. The volume brings together hitherto discrete and competing scholarly traditions: sociocultural analyses of learning, ethnographic literacy research, geospatial location studies, discourse analysis, comparative anthropological studies of education research and actor network theory. The contributions are united through a focus on the ways in which learning shapes lives in a digital age.

**Ola Erstad** is a professor in the Department of Educational Research, University of Oslo. Professor Erstad works across the fields of media and educational research and has published widely on issues of technology and education.

**Julian Sefton-Green** is an independent consultant and researcher. He is a principal research Fellow at the London School of Economics and an honorary professor at the Hong Kong Institute of Education. He has published widely on media education, informal learning and creativity.

## Contributors

**Hans Christian Arnseth** is an associate professor in the Department of Educational Research, University of Oslo. He is a member of the research group TransAction at the Faculty of Education. In his research, he explores computer-supported collaborative learning, the use of games and simulations in learning, interaction analysis of learning and identity construction in various contexts and transitions and boundaries between practices that young people participate in.

**Karin Aronsson** is a professor in the Department of Child and Youth Studies, Stockholm University. Her work focuses on how talk is used to build social organisation, with a particular focus on children's peer groups, family and institutional encounters. Other research interests include children's play, informal learning and second-language learning. She publishes internationally and is on the editorial board of several journals. She co-edited a recent book, *Children, Childhood and Everyday Life: Children's Perspectives* (Charlotte, NC: Information Age Publishing) with M. Hedegaard, C. Højholt and O. Skjær Ulvik.

**Maria Lucia Castanheira** is associate professor in the School of Education, Federal University of Minas Gerais, Brazil. Her research interests focus on the examination of literacy practices in and out of school, aiming to understand the meanings and consequences of being literate in specific contexts. She is particularly interested in examining the social construction of opportunities for learning, drawing upon discourse analysis and ethnographic approaches.

**Lynne Chisholm** holds the chair for education and generation at the University of Innsbruck (Austria) and is visiting professor at the University of Oslo (Norway). She specialises in comparative and interdisciplinary youth studies, together with the social and cultural analysis of education and learning across the life course (see <http://homepage.uibk.ac.at/~c603207/>).

**Kirsten Drotner** is a doctor of philosophy and professor of media studies at the University of Southern Denmark, where she also directs a national research centre, DREAM (Danish Research Centre on Education and Advanced Media Materials). Her research interests include audience studies, media uses, digital literacy formation and digital heritage studies. Among her publications are *The International Handbook on Children, Media and Culture* (2008; Sage, with co-editor Sonia Livingstone); *Informal Learning and Digital Media* (2008; Cambridge Scholars' Publishing, with co-editors Hans S. Jensen and Kim S. Schrøder) and *Digital Content Creation: Creativity, Competence, Critique* (2010; Peter Lang, with co-editor Kim S. Schrøder).

**Ola Erstad** is professor in the Department for Educational Research, University of Oslo, Norway. He has been working within both the fields of media and educational research, especially on media literacy/digital competence. He is leader of the research group TransAction: Learning, Knowing and Identity in the Information Society. He is involved in several research networks on digital media and education nationally, across the Nordic countries in Europe and internationally. Recent publications are 'The Learning Lives of Digital Youth – Beyond the Formal and Informal' (*Oxford Review of Education*, 2012) and 'Content in Motion: Remixing and Learning with Digital Media' (with Drotner & Schrøder, 2010).

**Øystein Gilje** is a postdoctoral researcher on the project 'Learning Lives' at the University of Oslo, Norway. His doctoral thesis 'Mode, Mediation and Moving Images: An Inquiry of Digital Editing Practices in Media Education' (2010) investigated young people's remixing practices by using a sociocultural and multimodal perspective. Gilje also led the research project 'Making a Filmmaker' (2007–9) on young filmmakers' learning trajectories in Scandinavia. Gilje has published his work recently in international journals, such as *Written Communication*, *Visual Communication* and *Nordicom Review*.

**Judith Green** is a professor at the University of California, Santa Barbara. Her research and teaching interests focus on teaching-learning relationships, disciplinary knowledge as socially constructed and ethnographic research and discourse studies of the patterns of everyday life in classrooms.

**Shirley Brice Heath**, Margery Bailey Professor of English and Dramatic Literature and professor of linguistics, emerita, Stanford University, studies youth in their own chosen learning environments all over the world. Her research theorises the processes of voluntary learning that advance young

people's development of conceptual understanding and skills called for by art, mathematics, science and language development.

**Jaakko Hilppö** is a Ph.D. student working in the Department of Teacher Education at the University of Helsinki. His interest currently focuses on children's agency and well-being and participatory research methods.

**Glynda A. Hull** is a professor of education in language, literacy and culture at the University of California, Berkeley, and a visiting research professor at New York University. Her research focuses on sociocultural perspectives on literacy, the intersection of new media and literacy and school-university partnerships.

**Kristiina Kumpulainen** is professor of education in the Department of Teacher Education, University of Helsinki. Her scientific work focuses on socioculturally informed research on learning and education, classroom interaction, collaborative learning, formal and informal learning, learner agency and identity, learning environments and new technologies, innovative schools and their pedagogies, teacher professional development and video research methodologies, as well as on interdisciplinary research for the promotion of learning in the twenty-first century.

**Jay L. Lemke** is senior research scientist in the Laboratory of Comparative Human Cognition (LCHC) and adjunct professor of communication at the University of California, San Diego. Before coming to San Diego, he was professor in the School of Education at the University of Michigan, and previously professor and executive officer of the Ph.D. programme in urban education at the Graduate Center of the City University of New York. He is the author of *Talking Science: Language, Learning, and Values* and *Textual Politics: Discourse and Social Dynamics*, as well as of more than one hundred publications in the fields of discourse linguistics, multimedia semiotics and science and literacy education. His current research focus is on the integration of feeling and meaning in multimedia activity systems.

**Lasse Lipponen** is a professor of education, with special reference to pre-school education, in the Department of Teacher Education, University of Helsinki. His research work is directed to teacher education, children's learning at the intersection of formal and informal learning environments and the development of children's agency.

**Mark Evan Nelson** is lecturer in English language and literacy education at Deakin University, in Victoria, Australia. He is an experienced teacher of art and design, as well as of literacy studies and language pedagogy, and he has

also lived and worked in the United States, Japan and Singapore. He received his Ph.D. in language and literacy education from the University of California, Berkeley, and his current research interests are in applied linguistics, new literacies, multimodal communication and textual analysis and new media composing of children and youth in in-school and out-of-school contexts.

**Helen Nixon** is associate professor of education in the Children and Youth Research Centre at Queensland University of Technology in Brisbane, Australia. She has published in the fields of English and literacy education and cultural studies and education. Current projects focus on the effects of mandated literacy assessment on teachers' work and the changing literacy demands of schooling in the middle years.

**Antti Rajala** is a Ph.D. student working in the Department of Teacher Education at the University of Helsinki. He is funded by the Doctoral Programme for Multidisciplinary Research on Learning Environments and takes part in the doctoral training of the Centre for Research on Activity, Development and Learning. His interest currently focuses on classroom interaction and participatory pedagogy.

**Julian Sefton-Green** is an independent researcher working in education and the cultural and creative industries. He is currently principal research Fellow in the Department of Media and Communication, London School of Economics and Political Science, and a research associate at the University of Oslo. He is an honorary professor of education at the University of Nottingham, United Kingdom, and at the Hong Kong Institute of Education. His work explores aspects of media education, new technologies, creative practices and informal learning. Recent volumes include joint editing of *The International Handbook of Creative Learning* (2011) and *Researching Creative Learning: Methods and Approaches* (2010), both published by Routledge ([www.julianseftongreen.net](http://www.julianseftongreen.net)).

**Kenneth Silseth** is a research Fellow in the Department of Educational Research, University of Oslo. He is a member of the research group TransAction at the Faculty of Education and has, in previous work, been investigating a wide range of themes linked to young people's use of new media. In his thesis, Silseth explores constructions of learning, identity and intersubjectivity in young people's use of digital technology in and out of school.

**Björn Sjöblom** is a postdoctoral researcher in the Department of Child and Youth Studies, Stockholm University. His research revolves around children

and youth's computer gaming, especially in co-located settings such as Internet cafés and LAN parties. Drawing primarily on video data, he studies situated and multimodal methods of communicating within such contexts. His dissertation 'Gaming Interaction: Conversations and Competencies in Internet Cafés' (Linköping University, 2011) deals with young players' interactional management of collaboration, disputes and gaming competence, and with how such interaction lies at the heart of participation in this gaming culture.

**Audra Skukauskaitė** is an associate professor at the University of the Incarnate Word. Her research and teaching interests focus on discourse and ethnographic research in education, open-ended interviewing methodology, impact of reforms on teachers and student learning in diverse classrooms.

**Randy Young** (nom de plume RelixStylz) is a musician, composer and multimedia artist from Oakland, California. He translates perspectives on urban life into the verbal, visual and musical languages of hip-hop culture, producing critical understandings of social, political and aesthetic experience for social media audiences.

## Acknowledgements

The editors would like to acknowledge the Norwegian Research Council's support of the project *Local Literacies and Community Spaces – Investigating Transitions and Transfers in the 'Learning Lives' of Groruddalen*, and, additionally the TransAction research group at the Faculty of Educational Sciences, University of Oslo, for their support and funding, which made the seminar at Soria Moria in 2009 possible.

We would also like to thank the editorial and production team at Cambridge and Naranee Ruthra-Rajan for her work on the index for this volume.

# Chapter 1

## Identity, Community, and Learning Lives in the Digital Age

Julian Sefton-Green and Ola Erstad

### WHY LEARNING LIVES?

In some ways, learning is as commonplace (and complex) and banal as living. It is difficult to imagine a state of ‘not learning’, and it is a truism to state that, in all our lives, we constantly draw on and develop knowledge through experience. The authors of this book take this for granted. Similarly, a long tradition of scholarship in the sociocultural tradition distinguishes learning from the processes of schooling; whilst schools and schooling are *the* dominant educational institutions in contemporary societies and determine much of what constitutes, defines and frames learning, how learning works in schools is not the end all and be all of the issue.

We use the phrase *learning lives* to describe two discrete but interrelated concepts. First, in developing further the sociocultural position is the idea that learning needs to be situated intricately and intimately in a matrix of ‘transactions’: experiences, life trajectories, voluntary and involuntary learning contexts, affective frames and social groupings that make up experience across our life-worlds. Our subjectivities, interpersonal interactions, our developing sense of ourselves, how we construct learner identities and narratives about what we know and can do are all part of how the authors of this volume see learning within a ‘whole-life’ perspective. This poses complex challenges for research to identify, describe and understand learning within such a web of influences and determinants.

Our second use of the phrase *learning lives* describes more the idea of learning *for* life. Although all definitions of learning imply this prospective use, we are concerned with exploring how learning occupies the forefront of the new forms of ‘liquid lives’ (Bauman, 2005) in ‘second’ or ‘late’ modernity (see Chisholm, Chapter 5) lived by the young and now centrally mediated

by a range of technologies, and how broader contemporary perspectives on learning alter our understanding of the role of learning in preparing and coping with changing life pathways and transitions.

The phrase *learning lives* grows out of a broad set of influential studies appearing from different disciplinary fields during the last decades. These studies do not represent a single unified field of research, but they address certain key challenges to the ways in which learning is embedded in our lives over time and which become more apparent as we move through the twenty-first century. These are studies of an ethnographic nature, documenting literacy practices in different cultures (Scribner & Cole, 1981; Heath, 1983; Barton & Hamilton, 1998), studies of media use among young people (Buckingham & Sefton-Green, 2004; Livingstone, 2002, Ito et al., 2010), studies of youth cultures (Fornäs, Lindberg & Sernhede, 1995; Pampols & Porzio, 2005), studies of place and space in children's and young people's geographies (Cresswell, 1996; Leander, Phillips & Headrick Taylor, 2010) or studies focusing on gender and schooling (McLeod & Yates, 2006; Rudberg & Bjerrum Nielsen, 2005). Few longitudinal studies have studied the timescales and pathways of learners (Lemke, 2000; Thomson 2009).

The rest of this introduction explores how our idea of *learning lives* might then be situated in a range of analytic and disciplinary perspectives and what its core elements might be in offering a series of *key concepts* to underpin the chapters that follow. This introduction also includes a discussion of why such ideas might be a useful corrective to contemporary approaches to education.

We first consider the relationship between theories of identity and theories of learning, and we follow this with a discussion about the meaning and nature of context. Next, we consider the meaning of learning for learners (and for researchers), thus leading to a consideration of debates about the purpose and nature of learning research in the current climate. We then describe the individual contributions to this volume, concluding with a section that poses a series of questions about the value of 'learning lives'.

## LEARNER IDENTITIES

In many ways, it is very difficult to disentangle an attention to identity from an understanding of learning. Much of the focus of subsequent chapters explores the particular role of learning identity (see especially Arnseth & Silseth, Chapter 2). This role can describe the identity produced through or by learning, and/or the identity acting as a precondition or context for learning and/or the kind of identity required by the learner to be able to learn as part of the learning process (Sinha, 1999).

Contemporary research, especially that from within the lifelong learning and adult education tradition, is especially interested in the centrality of learning identity to identity per se: 'People must become individuals through constructing or reconstructing their own biographies and life courses' (Glastra, Hake & Schedler, 2004). An attention to biography and the processes of narrativising life in this tradition reveals an interest in modes of identity creation. Ecclestone et al., for example, contrast du Bois-Reymond's 'choice-biographies' with Denzin's 'epiphanies' or 'turning points' in an attempt to theorise the connections between biography and social structure in the emergence of lifecourse theory. The introduction to a recent collection (Ecclestone, Biesta & Hughes, 2009) focusing on the idea of transition as a way into the nitty-gritty of identity work is especially concerned with how 'changing notions of the self' under the conditions of reflexive modernity (Giddens, 1991) reveal new kinds of stress within individuals and between them and social structures. Forms of 'biographicity' (Alheit & Dausien, 1999) emerge from such tensions to dominate as the primary process of identity-making.

These approaches open up ways of putting people in the messy materiality of their lives at the centre of educational research and seeing learning as part of a very wide range of social processes. Research within this broad spectrum of approaches examines life histories – how people construct narratives of their learning lives – thus positioning learning experiences as episodes within varying timescales and relating the meaning and purposes of learning to other lifecourse trajectories: family, work and so on (see contributions by Nixon [Chapter 10], Gilje [Chapter 12] and Nelson, Hull and Young [Chapter 13]). Questions of gender and class, as well as other important social determinants such as religious affiliation or ethnicity, are also key lenses through which the nature and learning of individuals can be positioned.

Yet, it is perhaps true to say that such approaches have been used primarily with respect to older people, certainly with youth as opposed to children and younger cohorts. This is partly common sense: older people have 'more' biography, or at least better access to the means of creating such narratives (see Chapter 13). Alternatively, and more critically, it is partly this process of denying children an ontological status and agency – a view heavily critiqued by the new sociology of childhood (Qvortrup et al., 1994) – that leads to a more closed developmentalist perspective when considering younger people's learning, one that implies that they can't draw on biographical perspectives. There are notable exceptions to this. Pollard and Filer's use of the idea of 'pupil career' addresses the idea of exploring how progress at school needs to

be situated in a wider perspective that encompasses family and friends, as well as a broad-based understanding of classroom interactions (Pollard & Filer, 1999). Wortham's year-long study of individuals within a classroom that explores the complex, detailed interactions between peers and teachers showing how students construct and are constituted by certain kinds of more or less productive learning identities (Wortham, 2005). Yet, the centrality of school, rather than other dimensions of children's lives, stands in contrast to sociological and cultural interpretations of how identities are formed through family or consumption (see, for example, Lareau, 2003, and Pugh, 2009, respectively).

Of course, the idea of identity is itself problematic. It tends to be used as shorthand – or, as Moje and Luke put it – as a metaphor for a range of constructs of the person, referring to, *inter alia* subjectivity, a person, the personal or the self, as well as to the social or psychological models of the individual (Moje & Luke, 2009). Their review notes five key metaphors: identity as difference, sense of self or subjectivity, mind or consciousness, narrative and position. They suggest that all studies of literacy learning either implicitly or explicitly draw upon one or the other of these sociological or psychological models in any conceptualisation of learning and, equally, that it is impossible to frame any research enquiry into learning without the researcher drawing on one of these models.

This epistemological dependency on an *a priori* notion to describe or even investigate the idea of learning identity can lead to a kind of theoretical stand-off in which one ends up finding out what one began the enquiry with in the first place. In general, much current social theory is preoccupied with the impact of changing forms of individuation and individualisation, of changing and different notions of identity in the current era. How such changes relate to ideas about learning is an important focus. Work from this perspective is interested in schools, the role of technology in learning and the role of the home and other out-of-school experiences as key sites where changing forms of individualisation are both constructed and constituted by these shifting social practices. However, such research is, by definition, troubled by the challenge of finding, describing and locating or identifying identity in learning. What are the phenomena under observation when it comes to identity? What constitutes evidence in descriptions of identity or, indeed, learning? This theme is explored in Chapter 8 by Green, Skukauskaite and Castanheira, and in Chapter 3 by Drotner. Traditionally, learning research relies on traces of identity in talk and other kinds of discourse, but what other 'evidence' might research draw on to make use of this slippery concept?
