To Jan, Pat, and Cari
(Congratulations to each of you on *your* accomplishments)
J.W.S.

To Eileen, Laura, and Rael
(Your accomplishments are greater)
J.C.W.

Preface to the Instructor

COBOL for Today has been designed with you in mind. The text is divided into four parts: (1) *Introductory Concepts* that explain the basic nucleus of COBOL, (2) *More Advanced COBOL Concepts* that explain the student's understanding and build on the basic nucleus, (3) *Fundamental File Processing Concepts* that introduce the student to sequential, indexed, relative, and virtual files (as well as other support for file operations including report writer and the sort verb), and (4) *Special Usage COBOL Concepts* that describes features of COBOL that are useful but not frequently used.

This text has been organized to provide both flexibility for classroom use (since most chapters are independent of each other) and increasing levels of rigor. The text begins with relatively simple concepts and gradually increases the level of difficulty to provide a more realistic picture of how COBOL is used in a commercial environment. Because of its breadth of content and level, this text could easily be used in an introductory, advanced, (or single accelerated) course in COBOL.

All of the materials presented in this text have been classroom tested, from the general discussion of each concept, the illustrations presented in each chapter, and the problems presented at the end of many of the chapters. Beyond explaining the basic concepts and syntax of COBOL, this text also presents descriptions and illustrations of coding style and embellishes on this style through sections labeled *Notes on Programming Style*.

To supplement the text, additional support materials are available. The first element of this support material is an *Instructor's Manual*. This manual describes the objectives, concepts, and answers to questions for each chapter, and it acts as a key to the other support materials. Second, over 200 *Transparency Masters* are available that illustrate basic to advanced statements and concepts. Third, *Program Support* is available. This feature includes a tested copy of each program identified in the text, whether a figure or a problem. Thus, you may customize the programs to your installation or make your own transparency masters illustrating particular programming statements or concepts. In addition, this feature also includes a sample data set and a copy of the printed results of each program. This feature also includes a *Test Bank* of approximately 1000 items. These materials are available to qualified adoptors on 5¼ inch or 3½ inch diskettes, or in printed form.

The authors view this text and its support materials as living documents. Although the authors have used this material in a classroom environment and continually strive to improve the presentation of it, your *suggestions and comments for improving this work are always welcome*.

Thank you for considering this text and we hope you find its presentation useful for both you and your students.

Preface to the Student

You are about to embark upon an area of study in computing that is the lifeblood of the commercial applications programmer. The COBOL programming language is a vital part of most business data-processing environments. Nationwide, as much as 80 percent of all new applications are written in COBOL. Thus, a knowledge of COBOL and a skill in writing programs are the single most important talents to those seeking an entry-level position in commercial processing.

COBOL is *not* the easiest language to learn. However, if it were easy, there would be no reason for a company to want to pay you handsomely for your programming talents and skills. Although you may find yourself frustrated at times, perseverance generally pays off in the long run. Of course, you will make mistakes. Even the “expert” programmer makes them, but what separates the “expert” from the “also rans” is that the expert doesn’t usually make the same mistake twice. Thus, you should try to learn something from each mistake. Next, you should allow yourself plenty of time to complete each assignment. Many students find it difficult to complete assignments when they wait until the last minute. While you might be able to construct a solution to a problem on a short-term basis, you will frequently find that there is “one more error” to fix. So, allow yourself time to fix that “one more error.” Finally, you should plan what you do. Not only should you plan the time you spend working on a solution to an assignment, but you should also plan the solution as well! Unless you are already an “expert” programmer, this “up front” time is usually well worth the effort and frequently reduces the amount of time spent coding and correcting errors.

We encourage you not only to learn COBOL, but to learn it well. Not only will you find your efforts immediately rewarding, but you will find that it pays off in terms of a successful career in data processing as well. We wish you success in this endeavor and good luck with your future.

J. Wayne Spence

John C. Windsor

Acknowledgments

The following acknowledgment has been reproduced from COBOL Edition, U.S. Department of Defense, at the request of the Conference on Data Systems Languages.

Any organization interested in reproducing the COBOL report and specifications in whole or in part, using ideas taken from this report as the basis for an instruction manual or for any other purpose is free to do so. However, all such organizations are requested to reproduce this section as part of the introduction to the document. Those using a short passage, as in a book review, are requested to mention "COBOL" in acknowledgment of the source, but need not quote this entire section.

COBOL is an industry language and is not the property of any company or group of companies, or of any organization or group of organizations.

No warranty, expressed or implied, is made by any contributor or by the COBOL Committee as to the accuracy and functioning of the programming system and language. Moreover, no responsibility is assumed by any contributor, or by the committee, in connection therewith.

Procedures have been established for the maintenance of COBOL. Inquiries concerning the procedures for proposing changes should be directed to the Executive Committee of the Conference on Data Systems Languages.

The authors and copyright holders of the copyrighted material used herein:

FLOW-MATIC (Trademark of Sperry Rand Corporation), Programming for the Univac (R) I and II, Data Automation Systems copyrighted 1958, 1959, by Sperry Rand Corporation; IBM Commercial Translator Form No. F 28-8013, copyrighted 1959 by IBM; FACT, DSI 27 A5260-2760, copyrighted 1960 by Minneapolis-Honeywell have specifically authorized the use of this material in whole or in part, in the COBOL specifications. Such authorization extends to the reproduction and use of COBOL specifications in programming manuals or similar publications.

Finally, we would like to express my deepest appreciation to those individuals whose considerable efforts, helpful suggestions, and professional expertise aided the authors in the development of this text. For the first edition, these individuals were:

Gary Block, Onondaga Community College—New York
Marilyn Bohl, Scientific Research Associates (SRA)—California

John B. Crawford, California Polytech Institute—Pomona
Tom Dart, Valdosa State University—Georgia
Robert W. Duvall, Virginia Commonwealth University—Richmond
Robert J. Fedrick, El Camino State University—California
David Greenblatt, Queens College—New York
Robert B. Kirklin, L.A. Harbor Community College—California
James L. Landre, California State University—Sacramento
J. David Naulmann, University of Minnesota
Ruth Schwartz, Arizona State University

For the second edition, these individuals were:

Barry Barlow
University of Southern Mississippi

Joseph J. Cebula
Community College of Pennsylvania
William G. Dey
Central Missouri State University

Mary Jane Fedor
Community College of Allegheny, South Campus
Pennsylvania

Kathleen Geletko
Community College of Allegheny, South Campus

Lillian E. Peters Hupert
Loyola University of Chicago

John E. Martin
University of Wisconsin, Milwaukee

Carl F. Slemmer
Frostburg State College
Maryland

For the third edition, these individuals were:

Professor Debra Burton
Southwest Texas State University

Professor Jim Hampson
Allegany Community College
Maryland

Professor Tim Holland-Davis
Orangeburg-Calhoun Technical College
South Carolina

Professor Ron McNeilly
Kishwaukee College
Illinois

Professor Timothy J. Rolfe
Gonzaga University
Washington

Professor Mary Sapp
DeKalb Area Technical School
Georgia

Professor Laura W. Swaney
Xavier University of Louisiana

Professor Julian Wade
DeKalb Area Technical School
Georgia

In addition, we would like to thank our colleagues at the University of North Texas for their assistance and helpful suggestions. Finally, a special note of thanks goes to our wives Jan and Eileen for their encouragement and assistance in the preparation of the manuscript.

While acknowledging the assistance of others, the authors assume full responsibility for any errors or omissions in this text.

<i>Preface to the Instructor</i>	<i>xv</i>
<i>Preface to the Student</i>	<i>xvii</i>
<i>Acknowledgments</i>	<i>xix</i>

PART I	INTRODUCTORY CONCEPTS	1
--------	-----------------------	---

CHAPTER 1	Introduction	3
	COBOL: The Past	3
	COBOL: The Present	4
	COBOL: The Future	5
	COBOL: The Environment	6
	Creation of a Keyed File	10
	Summary	11
	<i>Questions</i>	<i>11</i>
CHAPTER 2	Programming: The Traditional Versus a Structured Approach	13
	Flowcharting	14
	Structured Programming	16
	Pseudocode	30
	The Hierarchy Chart	31
	The Case Structure	34
	Approaches to Procedure Design	34
	Summary	35
	Notes on Programming Style	36
	<i>Questions</i>	<i>36</i>
CHAPTER 3	COBOL: A Matter of Form	39
	Overall Organization of COBOL	39
	Developing and Using a Hierarchy Chart	42

	Developing and Using Module Flowcharts	42
	Developing and Using Pseudocode	46
	The COBOL Coding Form	47
	Definitions, Rules, and Guidelines	48
	Summary	56
	Notes on Programming Style	57
	<i>Questions</i>	57
	<i>Exercises</i>	59
	<i>Problems</i>	60
CHAPTER 4	THE IDENTIFICATION DIVISION	63
	Purpose of the Division	63
	Overall View of the IDENTIFICATION DIVISION	63
	Summary	64
	Notes on Programming Style	64
	<i>Questions</i>	65
	<i>Exercises</i>	66
CHAPTER 5	THE ENVIRONMENT DIVISION	67
	Purpose of the Division	67
	Overall View of the ENVIRONMENT DIVISION	67
	SPECIAL-NAMES	68
	INPUT-OUTPUT SECTION	69
	SELECT and ASSIGN Clauses	69
	Sample ENVIRONMENT DIVISION Entries	71
	Summary	72
	Notes on Programming Style	72
	<i>Questions</i>	73
	<i>Exercises</i>	73
CHAPTER 6	THE DATA DIVISION	75
	Purpose of the Division	75
	Overall Description of the DATA DIVISION	75
	FILE SECTION	75
	Record Descriptions	77
	PICTURE Clauses	79
	Examples of FILE SECTION Entries	83
	The WORKING-STORAGE SECTION	86
	Summary	89
	Notes on Programming Style	89
	<i>Questions</i>	91
	<i>Exercises</i>	93
CHAPTER 7	THE PROCEDURE DIVISION	97
	Purpose of the Division	97
	Overall Structure of the PROCEDURE DIVISION	97
	OPEN and CLOSE Statements	98
	READ Statement	101
	WRITE Statement	103
	The MOVE Statement	105
	PERFORM Statements in General	108
	The Simple PERFORM Statement	110

	The PERFORM/UNTIL Statement	112
	The STOP Statement	115
	A Comprehensive Example	115
	Summary	121
	Notes on Programming Style	121
	<i>Questions</i>	122
	<i>Exercises</i>	124
	<i>Problems</i>	128
	Supplement for Chapter 7: Using the ACCEPT and DISPLAY Statements for Input and Output	133
	The ACCEPT Statement	133
	The DISPLAY Statement	139
	A Screen Input-Output Program	141
PART II	MORE ADVANCED COBOL CONCEPTS	145
CHAPTER 8	Editing Data for Printed Output	147
	Fixed Insertion	147
	Floating-Insertion	149
	Replacement	150
	Edited Data and the MOVE Statement	151
	The Inventory Listing Program (with Edited Output)	152
	Summary	156
	Notes on Programming Style	156
	<i>Questions</i>	157
	<i>Exercises</i>	158
	<i>Problems</i>	159
CHAPTER 9	The IF Statement and Other Structures	165
	IF Statements in General	165
	The Relational Test	165
	Compound IF Statements	169
	Implied Subjects and Relational Operations	171
	Nested IF Statements	172
	The Control Break	173
	The Simple GO TO Statement	179
	The EXIT Statement	179
	Control Break with Sections	179
	Paragraphs Versus Sections	183
	Summary	187
	Notes on Programming Style	187
	<i>Questions</i>	189
	<i>Exercises</i>	191
	<i>Problems</i>	191
CHAPTER 10	Arithmetic Statements	197
	The ADD Statement	197
	The SUBTRACT Statement	200
	The MULTIPLY Statement	201
	The DIVIDE Statement	202

	The COMPUTE Statement	203
	The Electric Utility Company Program	205
	The Page Break	217
	Summary	217
	Notes on Programming Style	218
	<i>Questions</i>	219
	<i>Exercises</i>	221
	<i>Problems</i>	223
CHAPTER 11	More on the IF Statements	229
	The Sign Test	229
	The Class Test	230
	The Condition-Name Test	231
	An Inventory Control Example	233
	Inventory Data Editing	238
	Summary	252
	Notes on Programming Style	252
	<i>Questions</i>	252
	<i>Exercises</i>	253
	<i>Problems</i>	255
CHAPTER 12	More on the PERFORM Statements	261
	The PERFORM/TIMES Statement	261
	The PERFORM/VARYING Statement	263
	PERFORM/VARYING: An Example	269
	Summary	278
	Notes on Programming Style	278
	<i>Questions</i>	279
	<i>Exercises</i>	280
	<i>Problems</i>	282
CHAPTER 13	Table Handling with Subscripts	287
	Single-Dimension Tables	287
	Inventory Control with a Table Lookup	290
	Loading a Table with the READ Statement	291
	Two-Dimensional Tables	298
	Sales Summary Report	299
	Three Dimension Tables	305
	Character Processing with Tables	307
	Variable-Length Tables	314
	Summary	314
	Notes on Programming Style	315
	<i>Questions</i>	316
	<i>Exercises</i>	317
	<i>Problems</i>	319
CHAPTER 14	Table Handling with Indexes	323
	The PERFORM Statement	324
	The SET Statement	324
	Sales Summary Report with Indexed Tables	328
	The SEARCH Statement	332
	The Sales Analysis Program with SEARCH Statements	338

	Summary	346
	Notes on Programming Style	346
	<i>Questions</i>	347
	<i>Exercises</i>	348
	<i>Problems</i>	350
PART III FUNDAMENTAL FILE PROCESSING CONCEPTS		357
CHAPTER 15	Report Writer	359
	Report Writer: The Advantages	359
	Report Writer: The Disadvantages	360
	The Anatomy of a Report	360
	FILE SECTION Entries	362
	The REPORT SECTION	364
	Describing the General Appearance of a Printed Page	365
	Record Definitions within the REPORT SECTION	367
	The LINE Clause	368
	The NEXT GROUP Clause	370
	The COLUMN Clause	371
	The SOURCE, VALUE, and SUM Clauses	371
	The RESET Clause	373
	The GROUP INDICATE Clause	373
	Other Clauses	374
	Creation of Report Writer Record Types	374
	The REPORT HEADING (RH) Record Type	375
	The PAGE HEADING (PH) Record Type	376
	DETAIL (DE) Record Types	376
	The PAGE FOOTING (PF) Record Type	378
	The REPORT FOOTING (RF) Record Type	379
	The CONTROLS Clause and its Relationship with CONTROL HEADINGS and CONTROL FOOTINGS	380
	The PROCEDURE DIVISION	384
	A Report Writer Program	386
	The USE BEFORE REPORTING Statement	398
	Summary	400
	Notes on Programming Style	400
	<i>Questions</i>	401
	<i>Exercises</i>	404
	<i>Problems</i>	406
CHAPTER 16	The SORT Statement	407
	The Sorting Process	407
	The SORT File	408
	The Specification of SORT Keys	409
	The Input Process	413
	The Output Process	415
	The Inventory Sort Problem	417
	General Limitations	424
	Summary	424
	Notes on Programming Style	424
	<i>Questions</i>	425

	<i>Exercises</i>	426
	<i>Problems</i>	428
CHAPTER 17	Sequential File Processing	433
	ENVIRONMENT DIVISION Considerations	435
	Other FILE CONTROL Paragraph Clauses	437
	System Flowcharts	439
	DATA DIVISION Considerations	441
	Processing Sequential Files-New Statement Options	442
	Building a Sequential File	444
	Updating a Sequential File	451
	Adding to a Sequential File	460
	Deleting from a Sequential File	466
	Sequential File Processing with Magnetic Disk	467
	Summary	468
	Notes on Programming Style	468
	<i>Questions</i>	468
	<i>Problems</i>	470
CHAPTER 18	Indexed File Processing	479
	ENVIRONMENT DIVISION Considerations	479
	DATA DIVISION Considerations	482
	PROCEDURE DIVISION Considerations	482
	Building an Indexed Sequential File	485
	Updating an Indexed Sequential File	491
	Adding to an Indexed Sequential File	497
	Summary	502
	Notes on Programming Style	502
	<i>Questions</i>	503
	<i>Problems</i>	504
CHAPTER 19	Relative and Virtual Files	505
	An Introduction to Relative Files	505
	Advantages and Disadvantages	506
	ENVIRONMENT DIVISION Considerations	507
	DATA DIVISION Considerations	508
	PROCEDURE DIVISION Considerations	509
	Preparing a Relative File	511
	Building a Relative File	513
	Updating a Relative File	519
	Adding Records to a Relative File	526
	Other Considerations for Relative Files	528
	Virtual Files	528
	The VSAM Structure	529
	Advantages and Disadvantages	530
	ENVIRONMENT DIVISION Considerations	530
	DATA DIVISION Considerations	532
	PROCEDURE DIVISION Considerations	533
	Building a VSAM KSDS File	537
	Updating a VSAM KSDS File	542
	Adding to a VSAM KSDS File	549
	Summary	553

Notes on Programming Style	554
<i>Questions</i>	554
<i>Problems</i>	557
PART IV SPECIAL USAGE COBOL CONCEPTS	559
CHAPTER 20 The COPY Verb and Subprograms	561
The COPY Statement	561
An Example of Using the COPY Verb	565
Subprograms	565
The CALL Statement	572
The GOBACK and EXIT PROGRAM Statements	573
Linking Data Values	573
The LINKAGE SECTION	574
A COBOL Main and Subprogram	575
Summary	579
Notes on Programming Style	579
<i>Questions</i>	580
CHAPTER 21 GO TO/DEPENDING ON and EVALUATE Statements	583
The GO TO/DEPENDING ON Statement	583
The EVALUATE Statement	590
Summary	591
Notes on Programming Style	591
<i>Questions</i>	591
CHAPTER 22 Multiple Record Descriptions, Redefinitions, and Renaming of Data Items	593
Multiple Record Descriptions	593
The REDEFINES Clause	596
Redefinition of Tables	597
The RENAMES Clause	600
Summary	606
Notes on Programming Style	607
<i>Questions</i>	607
CHAPTER 23 Noncharacter-oriented Data Storage	609
DISPLAY Data Items	610
Binary Data Items	611
Packed-Decimal Data Items	612
Floating-Point Data Items	613
Other Clauses Related to the Descriptions of Data	614
Noncharacter-oriented Data, Tables, and the SYNCHRONIZED Clause	617
Summary	620
Notes on Programming Style	620
<i>Questions</i>	622
CHAPTER 24 Character-oriented Data Processing	625
The STRING Statement	625
Using the STRING Statement	627
