Table of Integrals

Basic Forms

$$\int u \, dv = uv - \int v \, du$$

$$\int \frac{du}{u} = \ln |u| + C$$

$$\int a^u \, du = \frac{1}{\ln a} a^u + C$$

$$\int \cos u \, du = \sin u + C$$

$$\int \csc^2 u \, du = -\cot u + C$$

$$\int \csc u \cot u \, du = -\csc u + C$$

$$\int \cot u \, du = \ln |\sin u| + C$$

$$\int \csc u \, du = \ln |\csc u - \cot u| + C$$

$$\int \frac{du}{a^2 + u^2} = \frac{1}{a} \tan^{-1} \frac{u}{a} + C$$

$$\int \frac{du}{a^2 - u^2} = \frac{1}{2a} \ln \left| \frac{u+a}{u-a} \right| + C$$

$$\int u^n \, du = \frac{1}{n+1} u^{n+1} + C, \quad n \neq -1$$

$$\int e^u \, du = e^u + C$$

$$\int \sin u \, du = -\cos u + C$$

$$\int \sec^2 u \, du = \tan u + C$$

$$\int \sec u \tan u \, du = \sec u + C$$

$$\int \tan u \, du = \ln |\sec u| + C$$

$$\int \sec u \, du = \ln |\sec u + \tan u| + C$$

$$\int \frac{du}{\sqrt{a^2 - u^2}} = \sin^{-1} \frac{u}{a} + C$$

$$\int \frac{du}{u\sqrt{u^2 - a^2}} = \frac{1}{a} \sec^{-1} \frac{u}{a} + C$$

$$\int \frac{du}{u^2 - a^2} = \frac{1}{2a} \ln \left| \frac{u-a}{u+a} \right| + C$$

Forms Involving $\sqrt{a^2 + u^2}$

$$\int \sqrt{a^2 + u^2} \, du = \frac{u}{2} \sqrt{a^2 + u^2} + \frac{a^2}{2} \ln |u + \sqrt{a^2 + u^2}| + C$$

$$\int u^2 \sqrt{a^2 + u^2} \, du = \frac{u}{8} (a^2 + 2u^2) \sqrt{a^2 + u^2} - \frac{a^4}{8} \ln |u + \sqrt{a^2 + u^2}| + C$$

$$\int \frac{\sqrt{a^2 + u^2}}{u} \, du = \sqrt{a^2 + u^2} - a \ln \left| \frac{a + \sqrt{a^2 + u^2}}{u} \right| + C$$

$$\int \frac{du}{\sqrt{a^2 + u^2}} = \ln |u + \sqrt{a^2 + u^2}| + C$$

$$\int \frac{du}{u\sqrt{a^2 + u^2}} = -\frac{1}{a} \ln \left| \frac{\sqrt{a^2 + u^2} + a}{u} \right| + C$$

$$\int \frac{du}{(a^2 + u^2)^{3/2}} = \frac{u}{a^2 \sqrt{a^2 + u^2}} + C$$

$$\int \frac{\sqrt{a^2 + u^2}}{u^2} \, du = -\frac{\sqrt{a^2 + u^2}}{u} + \ln |u + \sqrt{a^2 + u^2}| + C$$

$$\int \frac{u^2 \, du}{\sqrt{a^2 + u^2}} = \frac{u}{2} \sqrt{a^2 + u^2} - \frac{a^2}{2} \ln |u + \sqrt{a^2 + u^2}| + C$$

$$\int \frac{du}{u^2 \sqrt{a^2 + u^2}} = -\frac{\sqrt{a^2 + u^2}}{a^2 u} + C$$

Forms Involving $\sqrt{a^2 - u^2}$

$$\int \sqrt{a^2 - u^2} \, du = \frac{u}{2} \sqrt{a^2 - u^2} + \frac{a^2}{2} \sin^{-1} \frac{u}{a} + C$$

$$\int \frac{\sqrt{a^2 - u^2}}{u} \, du = \sqrt{a^2 - u^2} - a \ln \left| \frac{a + \sqrt{a^2 - u^2}}{u} \right| + C$$

$$\int \frac{u^2 \, du}{\sqrt{a^2 - u^2}} = -\frac{u}{2} \sqrt{a^2 - u^2} + \frac{a^2}{2} \sin^{-1} \frac{u}{a} + C$$

$$\int \frac{du}{u^2 \sqrt{a^2 - u^2}} = -\frac{1}{a^2 u} \sqrt{a^2 - u^2} + C$$

$$\int (a^2 - u^2)^{3/2} \, du = -\frac{u}{8} (2u^2 - 5a^2) \sqrt{a^2 - u^2} + \frac{3a^4}{8} \sin^{-1} \frac{u}{a} + C$$

$$\int u^2 \sqrt{a^2 - u^2} \, du = \frac{u}{8} (2u^2 - a^2) \sqrt{a^2 - u^2} + \frac{a^4}{8} \sin^{-1} \frac{u}{a} + C$$

$$\int \frac{\sqrt{a^2 - u^2}}{u^2} \, du = -\frac{1}{u} \sqrt{a^2 - u^2} - \sin^{-1} \frac{u}{a} + C$$

$$\int \frac{du}{u\sqrt{a^2 - u^2}} = -\frac{1}{a} \ln \left| \frac{a + \sqrt{a^2 - u^2}}{u} \right| + C$$

$$\int \frac{du}{(a^2 - u^2)^{3/2}} = \frac{u}{a^2 \sqrt{a^2 - u^2}} + C$$

Forms Involving $\sqrt{u^2 - a^2}$

$$\int \sqrt{u^2 - a^2} du = \frac{u}{2} \sqrt{u^2 - a^2} - \frac{a^2}{2} \ln |u + \sqrt{u^2 - a^2}| + C$$

$$\int u^2 \sqrt{u^2 - a^2} du = \frac{u}{8} (2u^2 - a^2) \sqrt{u^2 - a^2} - \frac{a^4}{8} \ln |u + \sqrt{u^2 - a^2}| + C$$

$$\int \frac{\sqrt{u^2 - a^2}}{u} du = \sqrt{u^2 - a^2} - a \cos^{-1} \frac{a}{u} + C$$

$$\int \frac{du}{\sqrt{u^2 - a^2}} = \ln |u + \sqrt{u^2 - a^2}| + C$$

$$\int \frac{du}{u^2 \sqrt{u^2 - a^2}} = \frac{\sqrt{u^2 - a^2}}{a^2 u} + C$$

$$\int \frac{\sqrt{u^2 - a^2}}{u^2} du = -\frac{\sqrt{u^2 - a^2}}{u} + \ln |u + \sqrt{u^2 - a^2}| + C$$

$$\int \frac{u^2 du}{\sqrt{u^2 - a^2}} = \frac{u}{2} \sqrt{u^2 - a^2} + \frac{a^2}{2} \ln |u + \sqrt{u^2 - a^2}| + C$$

$$\int \frac{du}{(u^2 - a^2)^{3/2}} = -\frac{u}{a^2 \sqrt{u^2 - a^2}} + C$$

Forms Involving $a + bu$

$$\int \frac{u du}{a + bu} = \frac{1}{b^2} (a + bu - a \ln |a + bu|) + C$$

$$\int \frac{u^2 du}{a + bu} = \frac{1}{2b^3} [(a + bu)^2 - 4a(a + bu) + 2a^2 \ln |a + bu|] + C$$

$$\int \frac{du}{u(a + bu)} = \frac{1}{a} \ln \left| \frac{u}{a + bu} \right| + C$$

$$\int \frac{u du}{(a + bu)^2} = \frac{a}{b^2(a + bu)} + \frac{1}{b^2} \ln |a + bu| + C$$

$$\int \frac{u^2 du}{(a + bu)^2} = \frac{1}{b^3} \left(a + bu - \frac{a^2}{a + bu} - 2a \ln |a + bu| \right) + C$$

$$\int \frac{u du}{\sqrt{a + bu}} = \frac{2}{3b^2} (bu - 2a) \sqrt{a + bu}$$

$$\int \frac{du}{u \sqrt{a + bu}} = \frac{1}{\sqrt{a}} \ln \left| \frac{\sqrt{a + bu} - \sqrt{a}}{\sqrt{a + bu} + \sqrt{a}} \right| + C, \quad \text{if } a > 0$$

$$= \frac{2}{\sqrt{-a}} \tan^{-1} \sqrt{\frac{a + bu}{-a}} + C, \quad \text{if } a < 0$$

$$\int u^n \sqrt{a + bu} du = \frac{2u^n(a + bu)^{3/2}}{b(2n + 3)} - \frac{2na}{b(2n + 3)} \int \frac{u^{n-1}}{\sqrt{a + bu}} du$$

$$\int \frac{du}{u^n \sqrt{a + bu}} = -\frac{\sqrt{a + bu}}{a(n-1)u^{n-1}} - \frac{b(2n-3)}{2a(n-1)} \int \frac{du}{u^{n-1} \sqrt{a + bu}}$$

$$\int \frac{du}{u^2(a + bu)} = -\frac{1}{au} + \frac{b}{a^2} \ln \left| \frac{a + bu}{u} \right| + C$$

$$\int \frac{du}{u(a + bu)^2} = \frac{1}{a(a + bu)} - \frac{1}{a^2} \ln \left| \frac{a + bu}{u} \right| + C$$

$$\int u \sqrt{a + bu} du = \frac{2}{15b^2} (3bu - 2a)(a + bu)^{3/2} + C$$

$$\int \frac{u^2 du}{\sqrt{a + bu}} = \frac{2}{15b^3} (8a^2 + 3b^2u^2 - 4abu) \sqrt{a + bu}$$

$$\int \frac{\sqrt{a + bu}}{u} du = 2\sqrt{a + bu} + a \int \frac{du}{u \sqrt{a + bu}}$$

$$\int \frac{\sqrt{a + bu}}{u^2} du = -\frac{\sqrt{a + bu}}{u} + \frac{b}{2} \int \frac{du}{u \sqrt{a + bu}}$$

$$\int \frac{u^n du}{\sqrt{a + bu}} = \frac{2u^n \sqrt{a + bu}}{b(2n + 1)} - \frac{2na}{b(2n + 1)} \int \frac{u^{n-1} du}{\sqrt{a + bu}}$$

Trigonometric Forms

$$\int \sin^2 u du = \frac{1}{2}u - \frac{1}{4} \sin 2u + C$$

$$\int \tan^2 u du = \tan u - u + C$$

$$\int \sin^3 u du = -\frac{1}{3}(2 + \sin^2 u) \cos u + C$$

$$\int \tan^3 u du = \frac{1}{2} \tan^2 u + \ln |\cos u| + C$$

$$\int \sec^3 u du = \frac{1}{2} \sec u \tan u + \frac{1}{2} \ln |\sec u + \tan u| + C$$

$$\int \sin^n u du = -\frac{1}{n} \sin^{n-1} u \cos u + \frac{n-1}{n} \int \sin^{n-2} u du$$

$$\int \cos^2 u du = \frac{1}{2}u + \frac{1}{4} \sin 2u + C$$

$$\int \cot^2 u du = -\cot u - u + C$$

$$\int \cos^3 u du = \frac{1}{3}(2 + \cos^2 u) \sin u + C$$

$$\int \cot^3 u du = -\frac{1}{2} \cot^2 u - \ln |\sin u| + C$$

$$\int \csc^3 u du = -\frac{1}{2} \csc u \cot u + \frac{1}{2} \ln |\csc u - \cot u| + C$$

$$\int \cos^n u du = \frac{1}{n} \cos^{n-1} u \sin u + \frac{n-1}{n} \int \cos^{n-2} u du$$

(Continued inside back cover)

$$\int \tan^n u \, du = \frac{1}{n-1} \tan^{n-1} u - \int \tan^{n-2} u \, du$$

$$\int \sec^n u \, du = \frac{1}{n-1} \tan u \sec^{n-2} u + \frac{n-2}{n-1} \int \sec^{n-2} u \, du$$

$$\int \sin au \sin bu \, du = \frac{\sin(a-b)u}{2(a-b)} - \frac{\sin(a+b)u}{2(a+b)} + C$$

$$\int \sin au \cos bu \, du = -\frac{\cos(a-b)u}{2(a-b)} - \frac{\cos(a+b)u}{2(a+b)} + C$$

$$\int u \cos u \, du = \cos u + u \sin u + C$$

$$\int u^n \cos u \, du = u^n \sin u - n \int u^{n-1} \sin u \, du$$

$$\int \sin^n u \cos^m u \, du = -\frac{\sin^{n-1} u \cos^{m+1} u}{n+m} + \frac{n-1}{n+m} \int \sin^{n-2} u \cos^m u \, du$$

$$= \frac{\sin^{n+1} u \cos^{m-1} u}{n+m} + \frac{m-1}{n+m} \int \sin^n u \cos^{m-2} u \, du$$

$$\int \cot^n u \, du = \frac{-1}{n-1} \cot^{n-1} u - \int \cot^{n-2} u \, du$$

$$\int \csc^n u \, du = \frac{-1}{n-1} \cot u \csc^{n-2} u + \frac{n-2}{n-1} \int \csc^{n-2} u \, du$$

$$\int \cos au \cos bu \, du = \frac{\sin(a-b)u}{2(a-b)} + \frac{\sin(a+b)u}{2(a+b)} + C$$

$$\int u \sin u \, du = \sin u - u \cos u + C$$

$$\int u^n \sin u \, du = -u^n \cos u + n \int u^{n-1} \cos u \, du$$

Inverse Trigonometric Forms

$$\int \sin^{-1} u \, du = u \sin^{-1} u + \sqrt{1-u^2} + C$$

$$\int \tan^{-1} u \, du = u \tan^{-1} u - \frac{1}{2} \ln(1+u^2) + C$$

$$\int u \cos^{-1} u \, du = \frac{2u^2-1}{4} \cos^{-1} u - \frac{u\sqrt{1-u^2}}{4} + C$$

$$\int u^n \sin^{-1} u \, du = \frac{1}{n+1} \left[u^{n+1} \sin^{-1} u - \int \frac{u^{n+1} du}{\sqrt{1-u^2}} \right], \quad n \neq -1$$

$$\int u^n \cos^{-1} u \, du = \frac{1}{n+1} \left[u^{n+1} \cos^{-1} u + \int \frac{u^{n+1} du}{\sqrt{1-u^2}} \right], \quad n \neq -1$$

$$\int u^n \tan^{-1} u \, du = \frac{1}{n+1} \left[u^{n+1} \tan^{-1} u - \int \frac{u^{n+1} du}{1+u^2} \right], \quad n \neq -1$$

$$\int \cos^{-1} u \, du = u \cos^{-1} u - \sqrt{1-u^2} + C$$

$$\int u \sin^{-1} u \, du = \frac{2u^2-1}{4} \sin^{-1} u + \frac{u\sqrt{1-u^2}}{4} + C$$

$$\int u \tan^{-1} u \, du = \frac{u^2+1}{2} \tan^{-1} u - \frac{u}{2} + C$$

Exponential and Logarithmic Forms

$$\int u e^{au} \, du = \frac{1}{a^2} (au-1)e^{au} + C$$

$$\int e^{au} \sin bu \, du = \frac{e^{au}}{a^2+b^2} (a \sin bu - b \cos bu) + C$$

$$\int \ln u \, du = u \ln u - u + C$$

$$\int \frac{1}{u \ln u} \, du = \ln |\ln u| + C$$

$$\int u^n e^{au} \, du = \frac{1}{a} u^n e^{au} - \frac{n}{a} \int u^{n-1} e^{au} \, du$$

$$\int e^{au} \cos bu \, du = \frac{e^{au}}{a^2+b^2} (a \cos bu + b \sin bu) + C$$

$$\int u^n \ln u \, du = \frac{u^{n+1}}{(n+1)^2} [(n+1) \ln u - 1] + C$$

Hyperbolic Forms

$$\int \sinh u \, du = \cosh u + C$$

$$\int \tanh u \, du = \ln \cosh u + C$$

$$\int \operatorname{sech} u \, du = \tan^{-1} |\sinh u| + C$$

$$\int \operatorname{sech}^2 u \, du = \tanh u + C$$

$$\int \operatorname{sech} u \tanh u \, du = -\operatorname{sech} u + C$$

$$\int \cosh u \, du = \sinh u + C$$

$$\int \operatorname{coth} u \, du = \ln |\sinh u| + C$$

$$\int \operatorname{csch} u \, du = \ln |\tanh \frac{1}{2} u| + C$$

$$\int \operatorname{csch}^2 u \, du = -\operatorname{coth} u + C$$

$$\int \operatorname{csch} u \operatorname{coth} u \, du = -\operatorname{csch} u + C$$

Forms Involving $\sqrt{2au - u^2}$

$$\int \sqrt{2au - u^2} du = \frac{u-a}{2} \sqrt{2au - u^2} + \frac{a^2}{2} \cos^{-1} \left(\frac{a-u}{a} \right) + C$$

$$\int u \sqrt{2au - u^2} du = \frac{2u^2 - au - 3a^2}{6} \sqrt{2au - u^2} + \frac{a^3}{2} \cos^{-1} \left(\frac{a-u}{a} \right) + C$$

$$\int \frac{\sqrt{2au - u^2}}{u} du = \sqrt{2au - u^2} + a \cos^{-1} \left(\frac{a-u}{a} \right) + C \quad \int \frac{\sqrt{2au - u^2}}{u^2} du = -\frac{2\sqrt{2au - u^2}}{u} - \cos^{-1} \left(\frac{a-u}{a} \right) + C$$

$$\int \frac{du}{\sqrt{2au - u^2}} = \cos^{-1} \left(\frac{a-u}{a} \right) + C \quad \int \frac{u du}{\sqrt{2au - u^2}} = -\sqrt{2au - u^2} + a \cos^{-1} \left(\frac{a-u}{a} \right) + C$$

$$\int \frac{u^2 du}{\sqrt{2au - u^2}} = -\frac{(u+3a)}{2} \sqrt{2au - u^2} + \frac{3a^2}{2} \cos^{-1} \left(\frac{a-u}{a} \right) + C$$

$$\int \frac{du}{u \sqrt{2au - u^2}} = -\frac{\sqrt{2au - u^2}}{au} + C$$

Preface

Most students study calculus in order to use it as a tool in areas other than mathematics. They desire information about *why* calculus is important, and *where* and *how* it can be applied. As I wrote this text, I tried to keep these facts in mind. In particular, before an important concept is defined, problems which require the concept are presented. After sufficient theory has been developed, there are many interesting physical and mathematical examples to draw upon. However, the difficulty is to arouse student interest at the *beginning* of a new subject.

To illustrate my approach to calculus, in this text the limit concept is motivated by referring to three practical problems, one from physics, another from chemistry, and the third from mathematics. The notion of limit is then discussed in an intuitive manner, using numerical examples. A precise definition is introduced a section later, but only after references are made to previous examples. The definition is then reinforced through the use of two different graphical techniques. I believe that students should not spend an entire semester or more repeating the words “closer and closer,” nor should they be literally buried under epsilons and deltas! Limit theorems are stated and used in examples, but difficult proofs are placed in an appendix, where they may be left as reading assignments, discussed immediately, or postponed until a later time. A similar philosophy is followed when the derivative, the definite integral, and other important concepts are introduced.

In addition to achieving a good balance between rigor and intuition, my primary objective was to write a book which could be read and understood by college freshmen. Throughout each section I have striven for accuracy and clarity of exposition, together with a presentation which makes the transition from precalculus mathematics to calculus as smooth as possible.

This text contains sufficient material for any of the standard calculus sequences. The Table of Contents shows the order in which the material is presented. In general, Chapters 1 through 6 could constitute the equivalent of a one-semester course for students who only need a basic background consisting of limits, derivatives, and definite integrals of algebraic functions. Chapters 7 through 12 would ordinarily make up the second semester of work; however, Chapter 12 on infinite series could be postponed until the third semester. In this event, Chapter 13 on curves and polar coordinates, or parts of Chapter 14 on vectors could be substituted. The remainder of the text is intended for what is usually referred to as the third semester. Chapter 18 on vector calculus is somewhat unusual for a first course. Some instructors may wish to include this material and others not. For this reason it is placed near the end of the book, where portions may be omitted without interrupting the continuity of the text. The same is true for Chapter 19 on differential equations.

A great deal of thought was given to the construction of exercise sets. There are over 4,000 exercises, enough to keep even the most industrious student busy! Many are of the drill variety and should be attempted by everyone. Others are challenging and are intended for more highly motivated students. There is a review section at the end of each chapter consisting of a list of important topics together with pertinent exercises. The review exercises are similar in scope to those which appear throughout the chapter and may be used by students to prepare for examinations.

I wish to thank the following individuals, who reviewed the manuscript and offered many helpful suggestions: James Cornette, Iowa State University; August Garver, University of Missouri–Rolla; Douglas Hall, Michigan State University; Alan Heckenbach, Iowa State University; Simon Hellerstein, University of Wisconsin; David Mader, Ohio State University; William Meyers, California State University, San Jose; David Minda, University of Cincinnati; Chester Miracle, University of Minnesota; Donald Sherbert, University of Illinois; Charles Van Gordon, Millersville State College; Dale Walston, University of Texas.

Special thanks are due to Dr. Thomas Bronikowski of Marquette University, who carefully read the entire manuscript, worked every exercise, and was responsible for many improvements in the text. In addition, he has written a student supplement which contains detailed solutions for approximately one-third of the exercises.

I am grateful to Carolyn Meitler for an excellent job of typing the manuscript, and to the staff of Prindle, Weber & Schmidt, Inc., for their painstaking work in the production of this book. In particular, John Martindale, a fine editor and friend, has been a constant source of encouragement during my association with the company. Above all, I owe a debt of thanks to my family, for their patience and understanding over long periods of writing.

Contents

<i>Introduction: What is Calculus?</i>	1
Chapter 1: Prerequisites for Calculus	
1. Real Numbers	3
2. Coordinate Systems in Two Dimensions	10
3. Lines	17
4. Functions	25
5. Combinations of Functions	32
6. Inverse Functions	36
7. Review Exercises	40
Chapter 2: Limits of Functions	
1. Introduction	43
2. Definition of Limit	49
3. Theorems on Limits	53
4. One-Sided Limits	60
5. Continuous Functions	63
6. Limits at Infinity	70
7. Functions Which Become Infinite	75
8. Review Exercises	83
Chapter 3: The Derivative	
1. Introduction	85
2. Definition of Derivative	90
3. Rules for finding Derivatives	95
4. Increments and Differentials	103
5. The Chain Rule	108
6. Implicit Differentiation	113
7. Derivatives of Algebraic Functions	117
8. Higher Order Derivatives	121
9. Review Exercises	123

Chapter 4: Applications of the Derivative	
1. Tangent Lines and Normal Lines	125
2. Local Extrema of Functions	129
3. Rolle's Theorem and the Mean Value Theorem	134
4. The First Derivative Test	137
5. Concavity and the Second Derivative Test	143
6. Applications of Extrema	150
7. Velocity and Acceleration	156
8. Related Rates	159
9. Applications to Economics	164
10. Antiderivatives	168
11. Review Exercises	174
Chapter 5: The Definite Integral	
1. Area	177
2. Definition of Definite Integral	184
3. Properties of the Definite Integral	191
4. The Mean Value Theorem for Definite Integrals	194
5. The Fundamental Theorem of Calculus	197
6. Indefinite Integrals and Change of Variables	202
7. Numerical Integration	208
8. Review Exercises	214
Chapter 6: Applications of the Definite Integral	
1. Area	217
2. Solids of Revolution	225
3. Volumes using Cylindrical Shells	232
4. Volumes by Slicing	236
5. Work	239
6. Force Exerted by a Liquid	244
7. Arc Length	247
8. Other Applications	252
9. Review Exercises	258
Chapter 7: Topics in Analytic Geometry	
1. Conic Sections	261
2. Parabolas	262
3. Ellipses	268
4. Hyperbolas	273
5. Translation of Axes	278
6. Rotation of Axes	282
7. Review Exercises	286
Chapter 8: Exponential and Logarithmic Functions	
1. Introduction	289
2. The Natural Logarithmic Function	293
3. The Natural Exponential Function	299
4. Differentiation and Integration	305

5. General Exponential and Logarithmic Functions	309
6. Laws of Growth and Decay	314
7. Derivatives of Inverse Functions	319
8. Review Exercises	324

Chapter 9: Other Transcendental Functions

1. Limits of Trigonometric Functions	327
2. Derivatives of Trigonometric Functions	330
3. Integrals of Trigonometric Functions	337
4. Inverse Trigonometric Functions	341
5. Derivatives and Integrals of Inverse Trigonometric Functions	345
6. Hyperbolic Functions	351
7. Inverse Hyperbolic Functions	354
8. Review Exercises	357

Chapter 10: Additional Techniques and Applications of Integration

1. Integration by Parts	359
2. Trigonometric Integrals	364
3. Trigonometric Substitutions	368
4. Partial Fractions	373
5. Quadratic Expressions	378
6. Miscellaneous Substitutions	380
7. Moments and Centroids of Plane Regions	383
8. Centroids of Solids of Revolution	389
9. Review Exercises	394

Chapter 11: Indeterminate Forms, Improper Integrals, and Taylor's Formula

1. The Indeterminate Forms $0/0$ and ∞/∞	397
2. Other Indeterminate Forms	402
3. Integrals with Infinite Limits of Integration	405
4. Integrals with Infinite Integrands	408
5. Taylor's Formula	411
6. Newton's Method	416
7. Review Exercises	419

Chapter 12: Infinite Series

1. Infinite Sequences	421
2. Convergent or Divergent Infinite Series	428
3. Positive Term Series	435
4. Alternating Series	442
5. Absolute Convergence	445
6. Power Series	449
7. Differentiation and Integration of Power Series	453
8. Taylor and Maclaurin Series	456
9. The Binomial Series	461
10. Review Exercises	465

Chapter 13: Plane Curves and Polar Coordinates

1. Plane Curves and Parametric Equations	467
2. Tangent Lines to Curves	472
3. Polar Coordinate Systems	474
4. Polar Equations of Conics	480
5. Areas in Polar Coordinates	484
6. Lengths of Curves	488
7. Surfaces of Revolution	492
8. Review Exercises	496

Chapter 14: Vectors and Analytic Geometry in Three Dimensions

1. Vectors in Two Dimensions	499
2. Rectangular Coordinate Systems in Three Dimensions	509
3. Vectors in Three Dimensions	515
4. Geometric Aspects of Vectors	522
5. Lines in Space	528
6. Planes	531
7. The Vector Product	537
8. Cylinders and Surfaces of Revolution	543
9. Quadric Surfaces	549
10. Space Curves	554
11. Cylindrical and Spherical Coordinate Systems	557
12. Review Exercises	560

Chapter 15: Vector-Valued Functions

1. Definitions	563
2. Motion in Space	569
3. The Calculus of Vector-Valued Functions	574
4. Curvature	578
5. Tangential and Normal Components of Acceleration	585
6. Review Exercises	588

Chapter 16: Partial Differentiation

1. Functions of Several Variables	591
2. Limits and Continuity	597
3. Partial Derivatives	601
4. Increments and Differentials	606
5. The Chain Rule	612
6. Directional Derivatives	618
7. Tangent Planes	624
8. Extrema of Functions of Two Variables	629
9. Lagrange Multipliers	632
10. Review Exercises	639

Chapter 17: Multiple Integrals	
1. Double Integrals	641
2. Evaluation of Double Integrals	646
3. Areas and Volumes	654
4. Moments and Center of Mass	660
5. Double Integrals in Polar Coordinates	666
6. Triple Integrals	673
7. Applications of Triple Integrals	681
8. Triple Integrals in Cylindrical and Spherical Coordinates	686
9. Surface Area	691
10. Review Exercises	695
Chapter 18: Topics in Vector Calculus	
1. Vector Fields	697
2. Line Integrals	701
3. Independence of Path	713
4. Green's Theorem	719
5. Divergence and Curl	727
6. Surface Integrals	730
7. The Divergence Theorem	736
8. Stokes' Theorem	743
9. Review Exercises	749
Chapter 19: Differential Equations	
1. Introduction	753
2. Exact Differential Equations	758
3. Homogeneous Differential Equations	762
4. Linear Differential Equations of the First Order	764
5. Applications	767
6. Linear Differential Equations of the Second Order	771
7. Nonhomogeneous Linear Differential Equations	776
8. Series Solutions of Differential Equations	781
9. Review Exercises	783
Appendix I: Mathematical Induction	785
Appendix II: Theorems on Limits and Definite Integrals	789
Appendix III: The Trigonometric Functions	797
Appendix IV: Tables	
I. Trigonometric Functions	803
II. Exponential Functions	805
III. Natural Logarithms	805
Appendix V: Formulas from Geometry	806
Answers to Odd-Numbered Exercises	807
Index	850

What is Calculus?

Calculus was invented in the seventeenth century to provide a tool for solving problems involving motion. The subject matter of geometry, algebra, and trigonometry is applicable to objects which move at constant speeds; however, methods introduced in calculus are required to study the orbits of planets, to calculate the flight of a rocket, to predict the path of a charged particle through an electromagnetic field and, for that matter, to deal with all aspects of motion.

In order to discuss objects in motion it is essential first to define what is meant by *velocity* and *acceleration*. Roughly speaking, the velocity of an object is a measure of the rate at which the distance traveled changes with respect to time. Acceleration is a measure of the rate at which velocity changes. Velocity may vary considerably, as is evident from the motion of a drag-strip racer or the descent of a space capsule as it reenters the Earth's atmosphere. In order to give precise meanings to the notions of velocity and acceleration it is necessary to use one of the fundamental concepts of calculus, the *derivative*.

Although calculus was introduced to help solve problems in physics, it has been applied to many different fields. One of the reasons for its versatility is the fact that the derivative is useful in the study of rates of change of many entities other than objects in motion. For example, a chemist may use derivatives to forecast the outcome of various chemical reactions. A biologist may employ it in the investigation of the rate of growth of bacteria in a culture. An electrical engineer uses the derivative to describe the change in current in an electric circuit. Economists have applied it to problems involving corporate profits and losses.

The derivative is also used to find tangent lines to curves. Although this has some independent geometric interest, the significance of tangent lines is of major importance in physical problems. For example, if a particle moves along a curve, then the tangent line indicates the direction of motion. If we restrict

our attention to a sufficiently small portion of the curve, then in a certain sense the tangent line may be used to approximate the position of the particle.

Many problems involving maximum and minimum values may be attacked with the aid of the derivative. Some typical questions that can be answered are: At what angle of elevation should a projectile be fired in order to achieve its maximum range? If a tin can is to hold one gallon of a liquid, what dimensions require the least amount of tin? At what point between two light sources will the illumination be greatest? How can certain corporations maximize their revenue? How can a manufacturer minimize the cost of producing a given article?

Another fundamental concept of calculus is known as the *definite integral*. It, too, has many applications in the sciences. A physicist uses it to find the work required to stretch or compress a spring. An engineer may use it to find the center of mass or moment of inertia of a solid. The definite integral can be used by a biologist to calculate the flow of blood through an arteriole. An economist may employ it to estimate depreciation of equipment in a manufacturing plant. Mathematicians use definite integrals to investigate such concepts as areas of surfaces, volumes of geometric solids, and lengths of curves.

All the examples we have listed, and many more, will be discussed in detail as we progress through this book. There is literally no end to the applications of calculus. Indeed, in the future perhaps *you*, the reader, will discover new uses for this important branch of mathematics.

The derivative and the definite integral are defined in terms of certain limiting processes. The notion of limit is the initial idea which separates calculus from the more elementary branches of mathematics. Sir Isaac Newton (1642–1727) and Gottfried Wilhelm Leibniz (1646–1716) discovered the connection between derivatives and integrals. Because of this, and their other contributions to the subject, they are credited with the invention of calculus. Many other mathematicians have added a great deal to its development.

The preceding discussion has not answered the question “What is calculus?” Actually, there is no simple answer. Calculus could be called the study of limits, derivatives, and integrals; however, this statement is meaningless if definitions of the terms are unknown. Although we have given a few examples to illustrate what can be accomplished with derivatives and integrals, neither of these concepts has been given any meaning. Defining them will be one of the principal objectives of our early work in this text.
