出版者的话

文艺复兴以降，源远流长的科学精神和逐步形成的学术规范，使西方国家在自然科学的各个领域取得了垄断性的优势；也正是这样的传统，使美国在信息技术发展的六十多年间名家辈出、独领风骚。在商业化的进程中，美国的产业界与教育界越来越紧密地结合，计算机学科中的许多泰山北斗同时身处科研和教学的最前线，由此而产生的经典科学著作，不仅擘划了研究的范畴，还揭橥了学术的源变，既遵循学术规范，又自有学者个性，其价值并不会因年月的流逝而减退。

近年，在全球信息化大潮的推动下，我国的计算机产业发展迅猛，对专业人才的需求日益迫切。这对计算机教育界和出版界都既是机遇，也是挑战；而专业教材的建设在教育战略上显得举足轻重。在我国信息技术发展时间较短、从业人员较少的现状下，美国等发达国家在其计算机科学发展的几十年间积淀的经典教材仍有许多值得借鉴之处。因此，引进一批国外优秀计算机教材将对我国计算机教育事业的发展起积极的推动作用，也是与世界接轨、建设真正的世界一流大学的必由之路。

机械工业出版社华章图文信息有限公司较早意识到“出版要为教育服务”。自1998年始，华章公司就将工作重点放在了遴选、移译国外优秀教材上。经过几年的不懈努力，我们与Prentice Hall, Addison-Wesley, McGraw-Hill, Morgan Kaufmann等世界著名出版公司建立了良好的合作关系，从它们现有的数百种教材中甄选出Tanenbaum, Stroustrup, Kernighan, Jim Gray等大师名家的一批经典作品，以“计算机科学丛书”为总称出版，供读者学习、研究及收藏。大理石纹理的封面，也正体现了这套丛书的品位和格调。

“计算机科学丛书”的出版工作得到了国内外学者的鼎力襄助，国内的专家不仅提供了中肯的选题指导，还不辞劳苦地担任了翻译和审校的工作；而原书的作者也相当关注其作品在中国的传播，有的还专诚为其书的中译本作序。迄今，“计算机科学丛书”已经出版了近百个品种，这些书籍在读者中树立了良好的口碑，并被许多高校采用为正式教材和参考书籍，为进一步推广与发展打下了坚实的基础。

随着学科建设的初步完善和教材改革的逐渐深化，教育界对国外计算机教材的需求和应用都步入一个新的阶段。为此，华章公司将加大引进教材的力度，在“华章教育”的总规划之下出版三个系列的计算机教材：针对本科生的核心课程，剔抉外版菁华而成“国外经典教材”系列；对影印版的教材，则单独开辟出“经典原版书库”；定位在高级教程和专业参考的“计算机科学丛书”还将保持原来的风格，继续出版新的品种。为了保证这三套丛书的权威性，同时也为了更好地为学校和老师服务，华章公司聘请了中国科学院、北京大学、清华大学、国防科技大学、复旦大学、上海交通大学、南京大学、浙江大学、中国科技大学、哈尔滨工业大学、西安交通大学、中国人民大学、北京航空航天大学、北京邮电大学、中山大学、解放军理工大学、郑州大学、湖北工学院、中国国家信息安全测评认证中心等国内重点大学和科研机构在计算机的各个领域的著名学者组成“专家指导委员会”，为我们提供选题意见和出版监督。

“经典原版书库”是响应教育部提出的使用原版国外教材的号召，为国内高校的计算机教学度身订造的。在广泛地征求并听取丛书的“专家指导委员会”的意见后，我们最终选定了这30多种篇幅内容适度、讲解鞭辟入里的教材，其中的大部分已经被M.I.T.、Stanford、U.C. Berkley、C.M.U.等世界名牌大学采用。丛书不仅涵盖了程序设计、数据结构、操作系统、计算机体系结构、数据库、编译原理、软件工程、图形学、通信与网络、离散数学等国内大学计算机专业普遍开设的核心课程，而且各具特色——有的出自语言设计者之手、有的历三十年而不衰、有的已被全世界的几百所高校采用。在这些圆熟通博的名师大作的指引之下，读者必将在计算机科学的宫殿中由登堂而入室。

权威的作者、经典的教材、一流的译者、严格的审校、精细的编辑，这些因素使我们的图书有了质量的保证，但我们的目标是尽善尽美，而反馈的意见正是我们达到这一终极目标的重要帮助。教材的出版只是我们的后续服务的起点。华章公司欢迎老师和读者对我们的工作提出建议或给予指正，我们的联系方法如下：

P R E F A C E

THE MATURING SUBJECT

Certainly a measure of the maturity of any technical subject matter is how assimilated and formalized it becomes in the structure of the discipline that gave birth to it. From perhaps an esoteric and theoretical (even idiosyncratic) start, useful scientific knowledge follows a course upward to become a standard, codified, and above all, practical universal discourse. The functional mechanisms that nurture this development have always been an integral part of the scientific community at large.

WHY WE WROTE THIS BOOK

UNIX has reached that level of maturity in the computer science and engineering fields, as witnessed by our writing of this textbook, which we felt was long overdue. Together, we have more than 30 years of practical teaching experience at the college level. Our initial concept for this book grew out of our unwillingness to use either the large, intractable UNIX reference sources or the short, “UNIX-for-Idiots” guides to teach meaningful, complete, and relevant introductory classes on the subject. Moreover, a textbook approach, with pedagogy incorporating in-chapter tutorials and exercises, as well as useful problem sets at the end of each chapter, allows us to present all the important UNIX topics for a classroom lecture-laboratory-homework presentation. We can achieve this presentation in a manner that is optimal for learning (i.e., well-thought-out sequencing of topics, well-developed and timely lessons, laboratory work, and homework exercises/problems synchronized with the sequencing of chapters in the book). Additionally, because of the depth and breadth of coverage of these topics, anyone interested in furthering their professional knowledge of the subject matter will also find this textbook useful.

THE PURPOSES OF THIS BOOK

Our primary purpose is to describe to readers the UNIX application user's interface (AUI) and to do it in a way that gives the reader insight into the inner workings of the system, along with some important UNIX concepts, data structures, and algorithms. Notable examples are the UNIX file and process concepts and I/O redirection. The secondary purpose of this textbook is to describe some important UNIX software engineering tools for developers of C software and shell scripts. However, we do not describe the UNIX applications programmer's interface (API) in terms of C libraries and UNIX system calls. In writing this textbook we assumed no previous knowledge of UNIX or programming on the part of the reader.

THE PRESENTATION FORMAT

The book is laced with many diagrams and tables, hundreds of in-chapter tutorials and interactive shell sessions, in-chapter exercises, and end-of-chapter problems. A syntax box for every command, tool, and application covered describes the syntax of the command, its purpose, the output produced by the command, and its useful options and features. In addition, every chapter contains a summary of the material covered in the chapter.

PATHWAYS THROUGH THE TEXT

If this book is to be used as the main text for an introductory course in UNIX, all the chapters should be covered, with the possible exception of Chapter 20. If the book is to be used as a companion to the main text in an operating systems concepts and principles course, the coverage of chapters would be dictated by the order in which the main topics of the course are covered but should include Chapters 7, 12, and 13. For use in a C or Shell programming course, Chapters 7–20 and relevant sections of Chapters 3–6 would be a great help to students. The extent of coverage of Chapter 20 would depend on the nature of the course—partial coverage in an introductory and full coverage in an advanced course.

THE DESIGN OF FONTS

The following typefaces have been used in the book for various types of text items.

Typeface	Text Type
Boldface Roman	Keywords
Boldface	Any character or string typed at the keyboard
Monospace	(commands, shell variables, and user input)
Monospace	Commands, tools, applications, and their options in the text
<i>Italic</i>	A word being used as a word and text being emphasized
Roman	Everything else, including file pathnames

The keyboard presses are enclosed in angle brackets (e.g., <Enter> and <Ctrl-D>). The instruction “press <Ctrl-D>” means to hold the <Ctrl> key down while pressing the <D> key. This instruction is also denoted ^D.

SUPPLEMENTS

A comprehensive and informational Web site containing solutions to the In-Chapter Exercises, source code, and further references and links to other UNIX sites can be found at <http://lhotse.up.edu/>. Also, you can link to this site from the Addison Wesley Web Site at www.awl.com/cseng/titles/0-201-61260-7. Solutions to the Problems at

the end of each chapter are available exclusively to professors using this book to teach a course. For information on obtaining these solutions, please contact your local Addison-Wesley sales representative.

We take full responsibility for any errors in the book. You can send your error reports and comments to us at sarwar@egr.up.edu (or sarwar@up.edu) and bobk@egr.up.edu (or bobk@up.edu). We will incorporate your feedback and fix any errors in subsequent printings.

ACKNOWLEDGEMENTS

We started writing this textbook from scratch during the second week of May 1999 and finished reviewing the final draft with page numbers by the end of the third week of May 2000. Completing such a large project in such a short time is not possible without the help of many.

First and foremost, the authors sincerely thank the editor of the book, Maite Surez-Rivas, for her support, reassurance, professionalism, and understanding throughout this project. She is simply one of the best. We also thank Jason Miranda, Maite's assistant, who did excellent work in getting the proposal and the first draft reviewed in a timely manner, and Lisa Hogue for continuing the fine work after Jason. We also acknowledge the wonderful production crew that diligently worked so hard with us. Thanks to our developmental editor, Mary Clare McEwing, for valuable feedback; Regina Hagen for designing a memorable cover and title page, and Jarrod Gibbons for his work on the back cover. Special thanks are extended to Marilyn Lloyd, Project Manager at Pre-Press Company, Inc., for her many excellent suggestions and outstanding work in the production phase of this book. The work of the whole Addison-Wesley team gathered by Maite was, in one word, superb! Roses to Maite!

Our sincere thanks to the following reviewers who gave valuable feedback, and numerous accurate and insightful comments. Their contribution has certainly enhanced the quality of the final product.

Ronald E. Bass, Ed.D., Austin Community College
 Thomas A. Burns, Henry Ford Community College
 Chuck Lesko, Ph.D., Craven Community College
 Toshimi Minoura, Oregon State University
 Selmer Moen, Minot State University
 Gregory B. Newby, University of North Carolina at Chapel Hill
 Dr. Marianne Vakalis, Franklin University
 Dr. G. Jan Wilms, Union University, Jackson, Tennessee

Thanks go to Kent Thompson, Senior System Administrator, University of Portland School of Engineering Computer Network (UPSECN), for kindly contributing the .Xdefaults file found in Chapter 21. Thanks also go to Dale Frakes, Computer Operator, also of UPSECN, for his continued support in various capacities. He was always there when we needed him.

PERSONAL ACKNOWLEDGMENTS

Syed Mansoor Sarwar First, I would like to thank my dear parents for the unending love, support, inspiration, and encouragement they have given me throughout my life. They are the most wonderful parents, who stayed awake so I could sleep, took pains so that I could be in comfort, and taught me the right values by personal examples so that I could lead a meaningful life. I love you *Abbuje* and *Bajee*! Thanks also to my brothers and sisters, Masood, Nadeem, Aqeel, Rizwana, Nabeel, and Farhana, for their love and friendship. Special thanks go to Nadeem for his continued encouragement throughout the project and to Nabeel for reviewing some of the chapters and providing valuable feedback.

This textbook would have never seen the light of day without the continued love, support, and understanding of my partner and committed helper, my wife Robina. Thank you Robina; I couldn't have done it without you. Thanks for taking the kids to the soccer and basketball games when it was my turn, keeping them busy when I had to work on the book, and tolerating the printer noise in the middle of the night! And, thank you my little bundles of joy, my son Hassaan and daughter Maham, for the love and happiness that you have given me. Thanks also for allowing me to work for long hours. I love you both.

Last, but not least, thanks to my coauthors, Robert Koretsky and Aqeel Sarwar, for their reassurance throughout the project. Bob, this book would have been difficult to complete without your continued help.

Robert M. Koretsky I thank my wife Kathe, daughter Tara, and son Cody, for all of the love and support they have given me over the years. I also thank Mansoor Sarwar, for his inspiration and friendship.

Aqeel Sarwar I give thanks to my parents for their personal sacrifices and hard work in raising me and teaching me the right values. Thanks also go to my elder brother, Syed Mansoor Sarwar, for supporting me and giving me educational direction when I had none. I thank my entire family, parents, brothers, and sisters, for giving me true love. Last, but not least, I thank my wife for her support and my son for making my day, every day.

TABLE OF CONTENTS

Chapter 1 Overview of Operating Systems	1
1.1 Introduction	2
1.2 What Is an Operating System?	2
1.3 Operating System Services	4
1.4 Character Versus Graphical User Interfaces	4
1.5 Types of Operating Systems	5
1.6 The UNIX Family	6
Summary	6
Problems	7
Chapter 2 Brief History of the UNIX Operating System	9
2.1 Introduction	10
2.2 Historical Development of the UNIX Operating System	10
2.2.1 Beginnings	11
2.2.2 Research Operating System	12
2.2.3 AT&T System V	12
2.2.4 Berkely Software Distributions	12
2.2.5 The History of Shells	13
2.2.6 Current and Future Developments—LINUX	13
2.3 Variations in UNIX Systems	13
Summary	14
Problems	14
Chapter 3 Getting Started	15
3.1 Introduction	16
3.2 Computer System Hardware	16
3.2.1 Main/Primary Storage	16
3.2.2 Central Processing Unit (CPU)	17
3.2.3 Disk	18
3.2.4 Bus	18
3.2.5 I/O Devices	19
3.3 UNIX Software Architecture	19
3.3.1 Device Driver Layer	19
3.3.2 The UNIX Kernel	20
3.3.3 The System Call Interface	22
3.3.4 Language Libraries	22

xii Table of Contents

3.3.5 UNIX Shell	22
3.3.6 Applications	23
3.4 Logging On and Logging Off	23
3.5 Correcting Mistakes	27
3.6 Some Important System Setups	28
3.7 Some Useful Commands for the Beginner	30
3.7.1 Changing Your Password	30
3.7.2 Getting Help	30
3.7.3 Finding Out Who You Are and What the Name of Your UNIX System Is	34
Summary	35
Problems	36
Chapter 4 UNIX Shells	39
4.1 Introduction	40
4.2 Various UNIX Shells	41
4.2.1 Shell Programs	42
4.2.2 Which Shell Suits Your Needs?	42
4.2.3 Ways to Change Your Shell	43
4.2.4 Shell Start-up Files and Environment Variables	45
4.3 Some Other Useful General-Purpose Commands	46
4.3.1 Creating and Displaying Directories	46
4.3.2 Displaying Files	48
4.3.3 Printing Files	48
4.3.4 Displaying a Calendar	49
4.3.5 One-Way Real-Time Messaging	49
4.3.6 Notification of and Permission for Electronic Communication	50
4.3.7 Creating Pseudonyms for Commands	51
4.3.8 Displaying System Up Time	53
4.4 Shell Metacharacters	54
Summary	56
Problems	56
Chapter 5 Editing Text Files	59
5.1 Introduction	60
5.2 How to Do Short and Simple Edits by Using the pico Editor	61
5.2.1 Creating the Text of an e-mail Message with the pico Text Editor	61
5.2.2 How to Start, Save a File, and Exit	61
5.2.3 General Keystroke Commands and Cursor Management	64
5.2.4 Cutting/Pasting and Searching	66
5.3 Obtaining More Control by Using the vi Editor	67
5.3.1 Shell Script File	68
5.3.2 How to Start, Save a File, and Exit	70

5.3.3	The Format of a vi Command and the Modes of Operation	71
5.3.4	Cursor Movement and Editing Commands	76
5.3.5	Yank and Put (Copy and Paste) and Substitute (Search and Replace)	78
5.3.6	Setting the vi Environment	81
5.3.7	Executing Shell Commands from Within vi	82
5.4	Getting the Maximum Control by Using the emacs Editor	82
5.4.1	DOS Aliases	82
5.4.2	How to Start, Save a File, and Exit	84
5.4.3	Cursor Movement and Editing Commands	85
5.4.4	Keyboard Macros	86
5.4.5	Cut or Copy and Paste and Search and Replace	89
5.5	Optional—How to Do Graphical Editing by Using emacs and the X Window System	93
5.5.1	Editing Data Files	93
5.5.2	How to Start, Save a File, and Exit	94
5.5.3	X Window emacs Menus	96
	Summary	98
	Problems	98
 Chapter 6 Electronic Mail		 101
6.1	Introduction	102
6.2	How to Use the UNIX mail Command Effectively	105
6.2.1	Sending and Reading e-mail with the UNIX mail Command	105
6.2.2	Sending e-mail with mail	106
6.2.3	Reading e-mail with mail	109
6.2.4	Saving Messages in Folders	111
6.2.5	Replying to and Forwarding Messages—and Including Attachments	112
6.2.6	mail Aliases	113
6.3	elm—A Full Screen Display e-mail System	114
6.3.1	Sending a Message in elm	115
6.3.2	Sending e-mail with elm	115
6.3.3	Reading e-mail in elm	119
6.3.4	Forwarding and Replying to an e-mail Message in elm	120
6.3.5	Saving Messages in Folders	123
6.3.6	elm Aliases	123
6.4	pine—Another Full-Screen Display e-mail System	125
6.4.1	Sending an e-mail Message by Using pine with an Attachment Created in vi	125
6.4.2	Sending e-mail with pine	128
6.4.3	Reading e-mail with pine	130
6.4.4	Disposing of e-mail in Folders in pine	131
6.4.5	Using the pine Address Book	133
6.4.6	A Summary of pine Commands	137

Summary	138
Problems	139
Chapter 7 Files and File System Structure	143
7.1 Introduction	144
7.2 The UNIX File Concept	144
7.3 Types of Files	144
7.3.1 Simple/Ordinary File	144
7.3.2 Directory	145
7.3.3 Link File	146
7.3.4 Special File (Device)	146
7.3.5 Named Pipe (FIFO)	147
7.4 File System Structure	147
7.4.1 File System Organization	147
7.4.2 Home and Present Working Directories	148
7.4.3 Pathnames: Absolute and Relative	148
7.4.4 Some Standard Directories and Files	149
7.5 Navigating the File Structure	152
7.5.1 Determining the Absolute Pathname for Your Home Directory	153
7.5.2 Browsing the File System	154
7.5.3 Creating Files	157
7.5.4 Creating and Removing Directories	157
7.5.5 Determining File Attributes	159
7.5.6 Determining the Type of a File's Contents	161
7.6 File Representation and Storage in UNIX	163
7.7 Standard Files and File Descriptions	165
7.8 End of File (eof) Marker	167

9.3 Copying, Moving, and Removing Files	202
9.3.1 Copying Files	202
9.3.2 Moving Files	205
9.3.3 Removing/Deleting Files	207
9.3.4 Determining File Size	209
9.4 Appending to Files	211
9.5 Combining Files	213
9.6 Comparing Files	215
9.7 Removing Repeated Lines	219
9.8 Printing Files and Controlling Print Jobs	221
9.8.1 UNIX Mechanism for Printing Files	221
9.8.2 Printing Files	222
9.8.3 Finding the Status of Your Print Requests	224
9.8.4 Canceling Your Print Jobs	226
Summary	228
Problems	229
Chapter 10 Advanced File Processing	231
10.1 Introduction	232
10.2 Regular Expressions	232
10.3 Compressing Files	234
10.4 Sorting Files	238
10.5 Searching for Commands and Files	241
10.6 Searching Files	245
10.7 Cutting and Pasting	250
10.8 Encoding and Decoding	255
10.9 File Encryption and Decryption	258
Summary	262
Problems	263

Chapter 11 File Sharing	265
11.1 Introduction	266
11.2 Duplicate Shared Files	266
11.3 Common Login for Members of a Team	266
11.4 Setting Appropriate Access Permissions on Shared Files	267
11.5 Common Group for Members of a Team	267
11.6 File Sharing Via Links	267
11.6.1 Hard Links	268
11.6.2 Drawbacks of Hard Links	276
11.6.3 Soft/Symbolic Links	278
11.6.4 Pros and Cons of Symbolic Links	283
Summary	284
Problems	285
Chapter 12 Redirection and Piping	287
12.1 Introduction	288
12.2 Standard Files	288
12.3 Input Redirection	288
12.4 Output Redirection	290
12.5 Combining Input and Output Redirection	292
12.6 I/O Redirection with File Descriptors	293
12.7 Redirection Standard Error	294
12.8 Redirecting stdout and stderr in One Command	295
12.9 Redirecting stdin, stdout, and stderr in One Command	297
12.10 Redirecting Without Overwriting File Contents (Appending)	299
12.11 UNIX Pipes	301
12.12 Redirection and Piping Combined	305
12.13 Error Redirection in the C Shell	306
12.14 Recap of I/O and Error Redirection	310
Summary	312
Problems	313
Chapter 13 Processes	317
13.1 Introduction	318
13.2 Running Multiple Processes Simultaneously	318
13.3 UNIX Process States	319
13.4 Execution of Shell Commands	320
13.5 Process Attributes	324
13.6 Process and Job Control	328
13.6.1 Foreground and Background Processes and Related Commands	328
13.6.2 UNIX Daemons	335

13.6.3 Sequential and Parallel Execution of Commands	335
13.6.4 Abnormal Termination of Commands and Processes	340
13.7 Process Hierarchy in UNIX	344
Summary	345
Problems	346
Chapter 14 Networking and Internetworking	349
14.1 Introduction	350
14.2 Computer Networks and Internetworks	350
14.3 The Reasons for Computer Networks and Internetworks	351
14.4 Network Models	352
14.5 The TCP/IP Protocol Suite	354
14.5.1 TCP and UDP	354
14.5.2 Routing of Application Data—The Internet Protocol (IP)	355
14.5.3 IPv4 Addresses in Dotted Decimal Notation	357
14.5.4 Symbolic Names	358
14.5.5 Translating Names to IP Addresses—The Domain Name System	360
14.6 Internet Services and Protocols	362
14.7 The Client-Server Software Model	363
14.8 Application Software	364
14.8.1 Displaying the Host Name	364
14.8.2 Displaying List of Users Using Hosts on a Network	365
14.8.3 Displaying the Status of Hosts on a Network	367
14.8.4 Testing a Network Connection	368
14.8.5 Displaying Information about Users	369
14.8.6 Remote Login	373
14.8.7 Remote Command Execution	380
14.8.8 File Transfer	383
14.8.9 Remote Copy	387
14.8.10 Interactive Chat	389
