About the Author

Charles A. Pack is an Oracle Certified Professional DBA with over 15 years of IT experience. His range of experiences includes COBOL, C/C++, Basic, Visual Basic, Clipper, FoxPro, dBase, Prolog, Java, and PL/SQL programming; HP 3000 operations and database administration; network design and construction; Unix and Windows NT administration; and MS-SQL Server and Sybase administration. He earned a bachelor of science degree from Oklahoma State University, an MBA from the University of Oklahoma, and a master of science in computer science from Texas A&M University, Corpus Christi. He teaches Oracle DBA classes at Florida Community College, Jacksonville, and is a regular contributor to the North Florida Oracle User Group. He works for CSX Technology as a DBA project manager responsible for data warehouse, Oracle financials, and PeopleSoft Oracle databases. And he likes to barbecue

About the Oracle Certification Exams

The expertise of Oracle database administrators (DBAs) is integral to the success of today's increasingly complex system environments. The best DBAs operate primarily behind the scenes, looking for ways to fine-tune day-to-day performance to prevent unscheduled crises and hours of expensive downtime. They know they stand between optimal performance and a crisis that could bring a company to a standstill. The Oracle Certified Database Administrator Track provides DBAs with tangible evidence of their skills with the Oracle database.

The Oracle Certified Professional (OCP) Program was developed by Oracle to recognize technical professionals who can demonstrate the depth of knowledge and hands-on skills required to maximize Oracle's core products according to a rigorous standard established by Oracle. By earning professional certification, you can translate the impressive knowledge and skill you have worked so hard to accumulate into a tangible credential that can lead to greater job security or more challenging, better-paying opportunities.

Oracle Certified Professionals are eligible to receive use of the Oracle Certified Professional logo and a certificate for framing.

Requirements for Certification

To become an Oracle Certified Professional Database Administrator for the Oracle9*i* track, you must pass four tests. These exams cover knowledge of the essential aspects of the SQL language, Oracle administration, backup and recovery, and performance tuning of systems. The certification process requires that you pass the following four exams:

Exam 1: Introduction to Oracle9i: SQL (1Z0-007)

Exam 2: Oracle9i Database: Fundamentals | (1Z0-031)

Exam 3: Oracle9i Database Fundamentals II (1Z0-032)

Exam 4: Oracle9i Database: Performance Tuning (1Z0-033)

Recertification

Oracle announces the requirements for upgrading your certification based on the release of new products and upgrades. Oracle will give six months' notice announcing when an exam version is expiring.

Exam Format

The computer-based exam is a multiple-choice test, consisting of 56 questions that must be completed in 90–120 minutes.

Acknowledgments

hanks to my Oracle DBA coworkers Nirupam Majumdar, Gunjan Nath, Don Mongeon, Maritza Gonzalez, Yang Jiang, John King, Bill Sullivan, Bill Barker, Tim Stippler, Rich McClain, and Ron Grinam; my boss Nancy Von Dolteren for excusing my occasional outbursts; Bob Just, for your continuous support (no pun intended); and Robert

Freeman for perpetually challenging me and making me a better DBA.

A great big special thanks to Janet Stern for her technical editing on this book: her contribution was tremendous!

Thanks to my friends at Osborne/McGraw-Hill, Athena Honore and Jeremy Judson, and Beth Brown, Jeanne Henning, and Barbra Guerra from MacAllister Publishing Services.

Without question, I must thank my parents Charlene and Gus, who didn't seem to mind too much that I brought my laptop computer to their 50th wedding anniversary, and to Christmas dinner, and so on, and so on. Most of all, thanks to my beautiful, wonderful, awesome wife Donna—the love of my life—who continues to encourage and support me, and to our daughter Jenny, who thinks Daddy lives in his office. Now we can go play in the Florida sun . . .

Introduction

his book was specifically written to help you prepare for the Oracle Certified Professional (OCP) DBA Exam #1Z0-033: Oracle9*i* Performance Tuning. The book is designed to follow the published test content checklist for the Performance Tuning exam. Each chapter is dedicated to a section on the test content checklist, and each bullet

item on the test content checklist is discussed in detail.

The caveat, of course, is that Oracle has the right to change the test content anytime they choose. This book was written with the test content checklist that was available to the public at the time. Please keep that in mind before you send me an e-mail detailing everything that was missed in the content of this book.

Each content chapter begins with a list of subjects that will be covered and ends with a chapter summary, a two-minute drill, test questions for the chapter, and answers to the test questions.

I have also included two separate practice exams that are approximately the same length as the actual OCP exam. You'll find a third practice exam on the CD. Answers with explanations are provided immediately following each practice exam. I have attempted to make the exam questions similar in format and difficulty to the OCP exam questions; some questions will seem trivial, while others may seem impossible. Any occurrence of one of my questions on the actual exam or vice versa is purely coincidental.

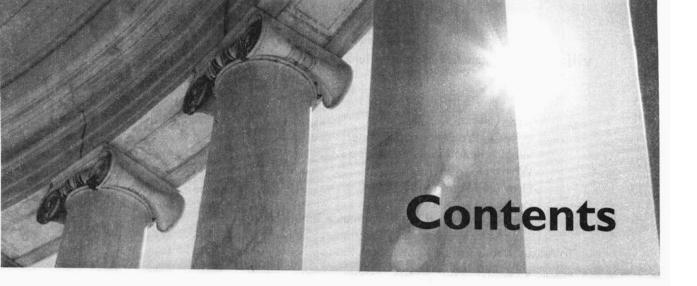

xviii Oracle9i Database: Performance Tuning Exam Guide

If you need additional resources to help you prepare for the exam, I suggest you start with the Oracle documentation set, freely available at http://technet. oracle.com. Click on the Documentation link, then click on the Oracle9*i* Database link. You can drill down to the "Oracle9*i* Database Performance Methods," "Application Developer's Guide—Fundamentals," "Database Concepts," and "Database Reference." These documents provide the foundation material that you should use when you exercise performance tuning and will give you an edge when preparing for the exam.

Also, Oracle University provides excellent instructor-led training; the Oracle9*i* Database Performance Tuning class is a great place to gain detailed performance tuning information and practice database performance tuning in a laboratory environment.

If you have any questions, please feel free to e-mail me at charlesapack@yahoo.com.

Enjoy, and good luck!

PART I	
OCP Tuning Exam Guide	
I Database Tuning Overview	
now this book is Organized	2
Topics Covered in the OCP DBA Tuning Exam	ī
ine Oracle Performance luning Methodology	
Diagnostics and luning lools	
Sizing the Shared Pool	6
Sizing Other SCA Structure	ϵ
Sizing Other SGA Structures	7
Database Configuration and I/O Issues	7
Optimizing Sort Operations	8
Diagnosing Contention for Latches	8
Tuning Rollback or UNDO Segments	g
Monitoring and Detecting Lock Contention	9
Tuning Oracle Shared Server	9
Application Tuning	_
Using Oracle Blocks Efficiently	10
SOI Statement Tuning	10
SQL Statement Tuning	11
OS Considerations	12
