Doctors tell us, "Eat less, don't smoke, and exercise more." Running is good exercise because it helps build a strong heart. It also helps most people lose weight. One 68-year-old woman runs three times a week. She runs to lose weight. "I love to eat," she says.

Running is good for health in other ways, too. Many runners say running makes colds and other small health problems go away. "Running is my doctor," says one man.

Running can also help people to relax(放松). So today men and women of all ages enjoy running.

"But I'm busy. I have a lot of work to do. I can't leave my factory," said her husband.

Millions of years ago, there were lots of trees on the earth, because summer lasted all year round. A forest covered the earth like a green carpet.

What was that forest like? It is not difficult to find out, because parts of that ancient forest still stand. It is known as the rain forest. Here, even in fine weather water drips through the leaves.

The largest of today's rain forests is in South America. It covers about a million square miles. All the trees are very tall. The young trees are up to 60 feet high. But it is not easy for some to grow taller, because very little sunlight reaches them.

The grown-up trees are about 60 to 120 feet high. Some are even taller. The tallest trees can be 200 or more feet high.

In this forest of tall trees, not only plant life is rich but also animal life. At different heights live different animals. By many noises they make you know they are there.
