ARCHÉS

FABRICHE DES IDEES

Shaping your ideas

www.gruppoarches.it

Gruppo Archés where ideas take place

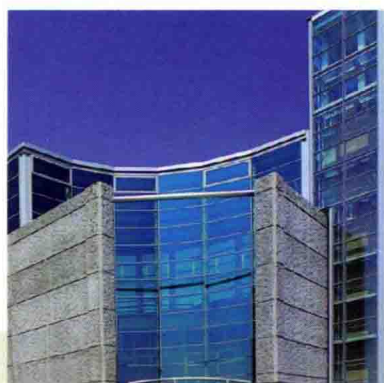

Borne from the strong request and from the desire to offer to the market a complete service able to ensure and suggest solutions in projects and fulfillments regardless of dimensions and typology.

The Group avail itself of the ten-year experience of Companies that belong it, each one totally specialized in a particular industrial and architectonic sector that warrant the Purchaser the higher and advanced solutions in the specific field they work.

The synergy is the main core of the whole Companies in order to ensure maximum quality and satisfaction of our customers making available competence of our engineers, architects and surveyors analyzing needs and employments of the final product.

Spav Prefabbricati Precast structures

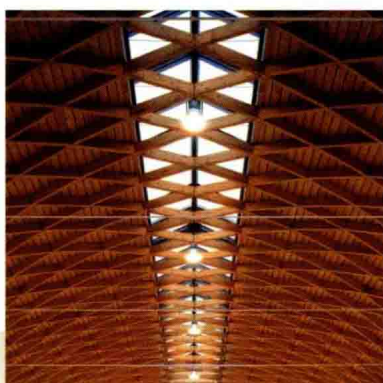

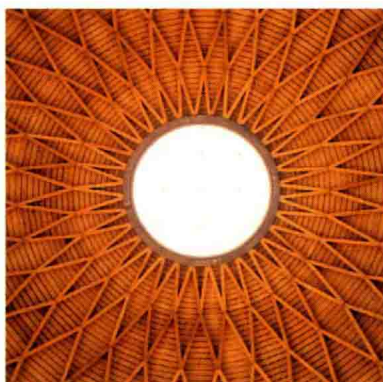

Leader Company in precast structures, since more than 40 years produces precast elements in high technology and standardization both for industrial, business and residential building trade taking care to aesthetic, safety and structural needs thanks to the employment of vibrated concrete or pre-stressed concrete manufactured with fixed and mobile plants.

spav prefabbricati

Euroholz Laminated timber structures

Laminated timber, a versatile material with an high aesthetic yield. Euroholz, a forefront technologic company that designs, produces and assembles glulam structures for civil, business, industrial and sport users from 1994. The company operates in accordance to the quality system applying UNI EN ISO 9001 rules and DIN 68141 and 1052 regulation emitted by the German agency. We offer a complete wide assistance in designing in order to realize any kind of project, even the most ambitious.

euroholz

Tecnoimage Architectural surfaces

Specialized in realizing covering façades, special coverings and architectural surfaces. It responds to the increasingly qualified needs of design studies in the activities of restoration, renovation, restyling. Thanks to its highly specialized staff, Tecnoimage is able to create claddings with relative metalwork, glass façades, metal roof coverings with relative additional elements, metal staircases, cantilever roofs, domes and made-to-measure metal elements. Tecnoimage is a building "tailor made" developer for architectural emotion.

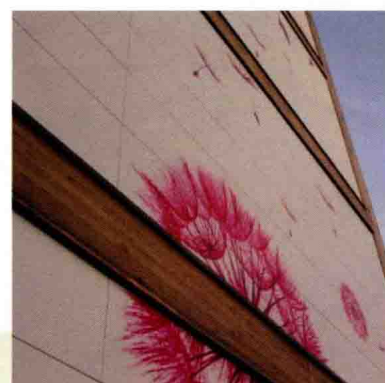

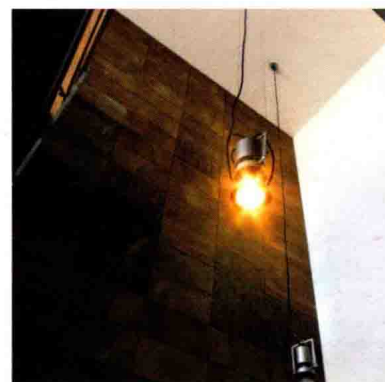

tecnoimage

Avantgarde Ventilated wall claddings

With this patent is now possible the employment of new and original materials, also contemporaneously, such as stone, wood, terracotta and the new one "eco", completely obtained from recycled materials and itself 100% recyclable.

With our system the substructure is no longer a mere support, but becomes a modular architectural device, allowing to set the cladding elements free from the bearing structure. Thanks to Avantgarde the designer can now indulge himself and create new volumes in a cheap and easy way.

LIGHT & DESIGN

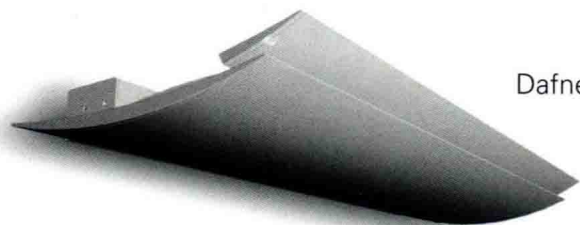

A dramatic black and white photograph. A bright, vertical beam of light enters from the top center, illuminating a dark, reflective surface. The light creates a series of concentric, circular ripples that spread outwards from the point of impact. The overall mood is mysterious and artistic.

Disegnata dalla luce
Drawn by light

fischer's main goal: an Environmentally Responsible Continuous Innovation to support people on site.

Glass

fischer FZP-G is a unique innovation in the glass industry. A glass point fixing solution which does not require any through hole. Fischer Zykon Panel anchor for glass panels is the first undercut anchor for thin and fragile glass plates. The 26 mm FZP-G fixing can be placed just 60 mm from the edge of the panels. An unbelievable reduction of the whole appearance of the traditional spider system with a 75% reduction in size. Developed for monolithic glass and safety glass (LSG), this system can also be used with enamelled or digitally printed glass as well for photovoltaic panels.

Insulation

fischer offers the most complete range of fixings for insulation boards. Any kind of insulation panel can be applied to any possible kind of substrate. Among those fischer Thermax, the first thermally insulated fixing system for off-standing application that eliminates any thermal cold bridge. Thermax insulating cone made of nylon is reinforced with glass fibres breaks the thermal flow in the threaded bar to avoid any heat transmission and achieve maximum safety standard.

Ventilated facades

fischer systems for backventilated facade are the result of research into increasingly sophisticated solutions for fixing thinner cladding. They are tested to ensure resistance to seismic stress and offer designers endless freedom of design in complete safety.

Structural Reinforcement

FRP systems are used in renovation and static adaptation of all kinds of structures as a valid alternative to traditional methods. Many advantages are guaranteed: easy handling and a quick installation without any specific equipment; complete reversibility, very important in the event of temporary work on historic buildings; last but not least overall lower costs.

Photovoltaic and Solar Energy

fischer Solar-fix is ideal for installations on sloped roofing, flat surfaces and for bespoke solutions. The pre-assembled system means a quick and easy installation. The system is sturdy and reliable over time thanks to its components made in aluminium and Aisi 304 stainless steel. Solar-premium is available for heavy loads and large span areas.

SaMontec Installation System

fischer offers a complete system for thermo-hydraulic and electrical plant installation in industrial areas and factories, with a specific product line. fischer SaMontec includes a range of premium quality, versatile, easy to use and entirely modular/compatible elements to minimize application times and ensure fast, rational assembly on site, with significant savings in time and efforts.
