前言

在中国的哲学中,"道"意味着"道路"、"途径"、"方法"、"原则"以及"伦理"等。老子云,"人法地,地法天,天法道,道法自然"。保护人类赖以生存的自然环境,才是人类永续发展的根本之道。

2011年秋,清华大学美术学院与芬兰阿尔托大学艺术、设计与建筑学院合作,成功举办了"持续之道——全球化背景下可持续艺术设计战略"国际研讨会,取得丰硕的学术成果和持久的影响。三年后的今天,两院继续深入合作,并与广东工业大学艺术设计学院一道,共同举办"持续之道——国际可持续设计学术研讨会暨设计作品展"。如果说 2011年的"国际研讨会"是"持续之道"的学术求索和思想盛宴,那么本次 2014年的"国际可持续设计学术研讨会"则是对全球化背景下可持续设计战略的进一步深化和具体化,而本次的"国际可持续设计作品展"将是当今世界范围内可持续设计作品在中国的首次集体呈现和闪亮登场。以物载道,道器相济!

在这三年中,我们的世界依旧过得并不轻松,加剧的雾霾足以抵消国人对新年的喜悦。即使是被誉为环境保护典范的芬兰,在气候变暖的全球化问题中也难以"独善其身",尴尬地度过无雪的"黑色"圣诞和异样的暖冬以及高温多雨的夏日。人们对世界环境的"异常"现象似乎"习以为常"。伴随着资源的日近枯竭和环境问题的加剧,世界发展模式迫切地需要(也必须)向可持续发展转型。与此同时,设计业也通过自身的精进发展和跨学科、多领域交叉,努力探索着自身从促进社会物质消费的"帮凶"向重新建构人、社会与自然和谐相处的"帮手"的转变,从回应资源、能源紧缺问题,到降低环境影响,回归人与自然的亲密关系,设计在其自身内涵和外延不断深化和拓展的同时,都越发广泛、明晰地呈现出对环境问题和可持续发展的积极回应和明确指向——持续之道!

2014年,中芬两国著名设计高等学府——清华大学美术学院、阿尔托大学艺术、设计与建筑学院以及广东工业大学艺术设计学院——向世界范围内征集和评选近年来顶尖可持续设计作品与成果,并以最为直观、生动的方式展现出传承与创新中的设计学科及其各专业领域对环境问题和可持续发展的积极思考,勾勒出设计实践探索中所展现的多元世界图景。三校搭建的平台将继续致力于促进世界各地设计界之间,设计界与商业、企业、技术、政府管理等多领域之间在该主题上的相互接触、了解和合作。

可持续设计体现了一种全新的设计观,它绝对不是一种风格、流派或者技术上的创新,而是一种设计思想和伦理上的革命,它既是科学的生物观、普遍的伦理观和 博大的共享观在艺术或设计中的体现,也可以说是设计师生态智慧的最直观、最富有成效的展示。它不允许任何人的怀疑,更不允许任何人有任何其他的选择,它 是全人类一切行动的根本指针,对人们的设计行为具有无条件的约束力,任何人都必须遵守。

因此,可持续发展作为一种战略,是我国乃至全球未来发展的根本战略,它不像以往出现过的任何一种风格或流派那样,是以人的意志为转移的可有可无、可信可不信的一种突发奇想,而是一场关乎人类生存的设计伦理上的革命。在探讨可持续设计理论与实践的过程中,除了要遵循一般的社会伦理规范之外,更应考虑人类必须承担的生态伦理的义务和责任。

可持续发展的上述属性决定了实现可持续设计的多样化途径,既可以从技术的角度来切入,也可以从人文的角度来考虑。在具体实施的过程中,设计师只要能够尽自己的努力在"节约"、"环保"、"健康"、"长效"等方面有所突破,就可以认为为人类社会的可持续发展作出了贡献。本次展览的评判标准,除了设计本身的艺术质量以外,更关注于设计中所体现的生态智慧。

本次"国际可持续设计作品展"所收录的作品,来自于艺术与设计的各个不同领域,它们除了来自于久经沙场、经验丰富的职业设计师以外,还有不少是来自于初出茅庐却锋芒小露的青年学生,他们怀着保护人类生存环境、促进人与环境和谐发展的责任感、使命感,在老师和其他师长的指导下,进行了有益的尝试和探索,令人欣慰,值得肯定。

金秋的中国北京,"持续之道——国际可持续设计学术研讨会暨设计作品展"热诚欢迎您的参与和到来。

PREFACE

In Chinese philosophy, "Tao" means "way", "approach", "method", "principle", "ethics", etc. According to Lao Tze, "Human follows the land, the land follows the heaven, the heaven follows Tao, and Tao follows nature." Protecting the natural environment, on which our basic human survival depends, is the most essential "Tao" for sustainable development of human beings.

In the autumn of 2011, the Academy of Arts and Design, Tsinghua University, China, and the School of Arts, Design and Architecture, Aalto University, Finland, cooperated and successfully held an international seminar "The Tao of Sustainability — An International Conference on Sustainable Design Strategies in a Globalization Context", which achieved great academic success and long-term impact. Now, three years later, the two schools continue to cooperate further, and together with the School of Arts and Design, Guangdong University of Technology, China, host "The Tao of Sustainability — An International Conference and Exhibition on Sustainable Design". If the international seminar in 2011 was an academic exploration and spiritual feast about "the Tao of sustainability", then this time the "International Exhibition on Sustainable Design" will further intensify and specify the sustainable design strategy in the context of globalization, and the "International Exhibition on Sustainable Design" will be the first collective presentation and brilliant show of worldwide sustainable design works in China. The "Tao" is conveyed by works and works develop with the "Tao".

In these three years, our world is still in a tough time. Aggravating smog is counteracting our joy for the New Year in China. Even Finland, which is hailed as a model for environment protection, can't remain as an outsider in global warming, and has embarrassedly passed snowless "black Christmas", unusual warm winter and rainy summer with high temperature. People seem to feel normal about the abnormal world environment. With the deterioration of resource and the environment, the pattern of world development urgently needs a shift to sustainability. Meanwhile, the design industry, through its own sophisticated development as well as interdisciplinary interactions, is also exploring the way of transitioning itself from the promoter of social consumption to the helper of restoring the harmony between human, society, and the nature. From the response to resource and energy shortage, to the attempt to reduce environmental impact and rebuild the intimacy between human and nature, all these show that design, as it is deepening its context and expanding its extension, and at the same time is increasingly paying more intensive and clearer attention to environmental problems and sustainable development, which is giving a positive response and specific direction to environmental problem — the Tao of sustainability.

In 2014, the famous design institutions of higher education in China and Finland — the Academy of Arts and Design, Tsinghua University, the School of Arts, Design and Architecture, Aalto University, and the School of Arts and Design, Guangdong University of Technology, have jointly collected and evaluated outstanding sustainable design work worldwide, which in the most direct and vivid way to exhibit the design discipline in its inheritance and innovation as well as positive thoughts on environmental problem and sustainable development in several professional fields. It depicts the diversified world scene in design practice and exploration. The three schools will continue to build the platform to promote more mutual understanding, interaction and cooperation on this theme around the design field worldwide. Furthmore, they will bridge the design field and other domains such as business, enterprises, technology and government management.

Sustainable design shows a brand new design point of view. It's definitely not an innovation of style, genre or technology, but a revolution of design concept and ethics. It shows the scientific biological view, prevalent ethic view and broad sharing view in art or design and it can also be seen as the most direct and effective exhibition of the designer's ecological intelligence. It permits no doubt, and won't allow anyone to have other choices. It's the fundamental guide of human behavior and sets absolute rules to design. All should abide by it.

So as a strategy, sustainability is the fundamental principle of our nation and even the global future development. It is not like any one of the past styles or genres that are nonessential whims depending on human will. It is a revolution of design ethics concerning human survival. In the exploration of sustainable design theory and practice, except for following normal social ethic regulations, the obligation and responsibility of human for ecology ethics must be taken into more account.

The above-mentioned properties of sustainable development determine the diversified ways to achieve sustainable design. It can be started from techniques or it can also be considered from humanity. In specific practice process, if designers can try their best to get breakthroughs in terms of "saving", "eco-friendly", "healthy" and "long-acting", etc., they can be considered making a contribution to the sustainable development of human society. Except for the art quality of the design itself, the evaluation criteria of this exhibition will concentrate more on the ecology wisdom conveyed in the work.

This time the works collected in the "International Exhibition of Sustainable Design" are from different fields of art and design. Except for experienced professional designers, lots of works are by newly-fledged but outstanding young students. With the sense of responsibility to protect human existence environment and promote harmonious development of human and the environment, they have had beneficial attempts and exploration with the instruction of their teachers and other seniors, which is comforting and deserves recognition.

In the beautiful golden autumn of Beijing, China, "The Tao of Sustainability — An International Conference and Exhibition on Sustainable Design" warmly welcomes your arrival and participation.
