PREFACE 前言

Residence is the most important architectural form of cityscape. It not only meets people's requirements for habitation, but also has become an external embodiment of the city's landscape and feature. With the continuous advancement of urbanization and sharply rising urban population, residence is no longer just a shelter for people. People now concern more about the beauty of the design and the comfort of living, and this is also a challenging task for most of the residential designers.

Residential Design Manual is a professional book that comprehensively presents and introduces the excellent residential design cases both at home and abroad. It has carefully selected the highly representative residential designs to provide a panoramic view of the residences in different styles, which range from the postmodern-style residences to the British-style townhouses, from the waterfront residences of the new Lingnan style to the building complex of classical style. This book is simple but profound, deeply analyzing every project in hope of enabling the readers to feel the beauty of residential design and experience the ingenious thoughts of the designers. Meanwhile, this book is highly illustrated with abundant high-resolution photos, allowing readers to experience the beauty of these residences. It will be an important reference book for both the professional and amateur readers.
