Computer Networks and Internets

Sixth Edition

[美] Douglas E. Comer 著

电子工业出版社

Publishing House of Electronics Industry

北京·BEIJING

内 容 简 介

本书在前几版的基础上进行了全面的修订与更新,系统介绍了计算机网络各方面的知识,全面翔实地讲解网络底层细节,并增加了最新的网络应用与技术。全书共分为五大部分,讲解了网络基础知识与因特网应用,数据传输技术,分组交换及网络技术,网络互联协议,以及其他网络概念与技术;并提供了可深入阅读的相关资料。本书内容涵盖广泛,例题丰富,注重实践,并提供了大量的练习题和丰富的网络资源,兼顾到教师和学生的双重需求。

本书是一本导论性的网络课程教材,可作为高等院校计算机、电子通信等专业高年级本科生和研究生的网络课程双语教材或参考书,也可供相关领域的科研和技术开发人员参考。

Contents

PART I Introduction And Internet Applications

Chapter 1 Introduction And Overview 35

- 1.1 *Growth Of Computer Networking* 35
- 1.2 *Why Networking Seems Complex* 36
- 1.3 *The Five Key Aspects Of Networking* 36
- 1.4 *Public And Private Parts Of The Internet* 40
- 1.5 *Networks, Interoperability, And Standards* 42
- 1.6 *Protocol Suites And Layering Models* 43
- 1.7 *How Data Passes Through Layers* 45
- 1.8 *Headers And Layers* 46
- 1.9 *ISO And The OSI Seven Layer Reference Model* 47
- 1.10 *Remainder Of The Text* 48
- 1.11 *Summary* 48

Chapter 2 Internet Trends 51

- 2.1 *Introduction* 51
- 2.2 *Resource Sharing* 51
- 2.3 *Growth Of The Internet* 52
- 2.4 *From Resource Sharing To Communication* 55
- 2.5 *From Text To Multimedia* 55
- 2.6 *Recent Trends* 56
- 2.7 *From Individual Computers To Cloud Computing* 57
- 2.8 *Summary* 58

Chapter 3 Internet Applications And Network Programming 61

- 3.1 *Introduction* 61
- 3.2 *Two Basic Internet Communication Paradigms* 62

3.3	<i>Connection-Oriented Communication</i>	63
3.4	<i>The Client-Server Model Of Interaction</i>	64
3.5	<i>Characteristics Of Clients And Servers</i>	65
3.6	<i>Server Programs And Server-Class Computers</i>	65
3.7	<i>Requests, Responses, And Direction Of Data Flow</i>	66
3.8	<i>Multiple Clients And Multiple Servers</i>	66
3.9	<i>Server Identification And Demultiplexing</i>	67
3.10	<i>Concurrent Servers</i>	68
3.11	<i>Circular Dependencies Among Servers</i>	69
3.12	<i>Peer-To-Peer Interactions</i>	69
3.13	<i>Network Programming And The Socket API</i>	70
3.14	<i>Sockets, Descriptors, And Network I/O</i>	70
3.15	<i>Parameters And The Socket API</i>	71
3.16	<i>Socket Calls In A Client And Server</i>	72
3.17	<i>Socket Functions Used By Both Client And Server</i>	72
3.18	<i>The Connect Function Used Only By A Client</i>	74
3.19	<i>Socket Functions Used Only By A Server</i>	74
3.20	<i>Socket Functions Used With The Message Paradigm</i>	77
3.21	<i>Other Socket Functions</i>	78
3.22	<i>Sockets, Threads, And Inheritance</i>	79
3.23	<i>Summary</i>	79

Chapter 4 Traditional Internet Applications

83

4.1	<i>Introduction</i>	83
4.2	<i>Application-Layer Protocols</i>	83
4.3	<i>Representation And Transfer</i>	84
4.4	<i>Web Protocols</i>	85
4.5	<i>Document Representation With HTML</i>	86
4.6	<i>Uniform Resource Locators And Hyperlinks</i>	88
4.7	<i>Web Document Transfer With HTTP</i>	89
4.8	<i>Caching In Browsers</i>	91
4.9	<i>Browser Architecture</i>	93
4.10	<i>File Transfer Protocol (FTP)</i>	93
4.11	<i>FTP Communication Paradigm</i>	94
4.12	<i>Electronic Mail</i>	97
4.13	<i>The Simple Mail Transfer Protocol (SMTP)</i>	98
4.14	<i>ISPs, Mail Servers, And Mail Access</i>	100
4.15	<i>Mail Access Protocols (POP, IMAP)</i>	101
4.16	<i>Email Representation Standards (RFC2822, MIME)</i>	101
4.17	<i>Domain Name System (DNS)</i>	103
4.18	<i>Domain Names That Begin With A Service Name</i>	105
4.19	<i>The DNS Hierarchy And Server Model</i>	106
4.20	<i>Name Resolution</i>	106
4.21	<i>Caching In DNS Servers</i>	108

4.22	<i>Types Of DNS Entries</i>	109
4.23	<i>Aliases And CNAME Resource Records</i>	110
4.24	<i>Abbreviations And The DNS</i>	110
4.25	<i>Internationalized Domain Names</i>	111
4.26	<i>Extensible Representations (XML)</i>	112
4.27	<i>Summary</i>	113

PART II Data Communication Basics

Chapter 5 Overview Of Data Communications 119

5.1	<i>Introduction</i>	119
5.2	<i>The Essence Of Data Communications</i>	120
5.3	<i>Motivation And Scope Of The Subject</i>	121
5.4	<i>The Conceptual Pieces Of A Communications System</i>	121
5.5	<i>The Subtopics Of Data Communications</i>	124
5.6	<i>Summary</i>	125

Chapter 6 Information Sources And Signals 127

6.1	<i>Introduction</i>	127
6.2	<i>Information Sources</i>	127
6.3	<i>Analog And Digital Signals</i>	128
6.4	<i>Periodic And Aperiodic Signals</i>	128
6.5	<i>Sine Waves And Signal Characteristics</i>	129
6.6	<i>Composite Signals</i>	131
6.7	<i>The Importance Of Composite Signals And Sine Functions</i>	131
6.8	<i>Time And Frequency Domain Representations</i>	132
6.9	<i>Bandwidth Of An Analog Signal</i>	133
6.10	<i>Digital Signals And Signal Levels</i>	134
6.11	<i>Baud And Bits Per Second</i>	135
6.12	<i>Converting A Digital Signal To Analog</i>	136
6.13	<i>The Bandwidth Of A Digital Signal</i>	137
6.14	<i>Synchronization And Agreement About Signals</i>	137
6.15	<i>Line Coding</i>	138
6.16	<i>Manchester Encoding Used In Computer Networks</i>	140
6.17	<i>Converting An Analog Signal To Digital</i>	141
6.18	<i>The Nyquist Theorem And Sampling Rate</i>	142
6.19	<i>Nyquist Theorem And Telephone System Transmission</i>	142
6.20	<i>Nonlinear Encoding</i>	143
6.21	<i>Encoding And Data Compression</i>	143
6.22	<i>Summary</i>	144

7.1	<i>Introduction</i>	147
7.2	<i>Guided And Unguided Transmission</i>	147
7.3	<i>A Taxonomy By Forms Of Energy</i>	148
7.4	<i>Background Radiation And Electrical Noise</i>	149
7.5	<i>Twisted Pair Copper Wiring</i>	149
7.6	<i>Shielding: Coaxial Cable And Shielded Twisted Pair</i>	151
7.7	<i>Categories Of Twisted Pair Cable</i>	152
7.8	<i>Media Using Light Energy And Optical Fibers</i>	153
7.9	<i>Types Of Fiber And Light Transmission</i>	154
7.10	<i>Optical Fiber Compared To Copper Wiring</i>	155
7.11	<i>Infrared Communication Technologies</i>	156
7.12	<i>Point-To-Point Laser Communication</i>	156
7.13	<i>Electromagnetic (Radio) Communication</i>	157
7.14	<i>Signal Propagation</i>	158
7.15	<i>Types Of Satellites</i>	159
7.16	<i>Geostationary Earth Orbit (GEO) Satellites</i>	160
7.17	<i>GEO Coverage Of The Earth</i>	161
7.18	<i>Low Earth Orbit (LEO) Satellites And Clusters</i>	162
7.19	<i>Tradeoffs Among Media Types</i>	162
7.20	<i>Measuring Transmission Media</i>	163
7.21	<i>The Effect Of Noise On Communication</i>	163
7.22	<i>The Significance Of Channel Capacity</i>	164
7.23	<i>Summary</i>	165

8.1	<i>Introduction</i>	169
8.2	<i>The Three Main Sources Of Transmission Errors</i>	169
8.3	<i>Effect Of Transmission Errors On Data</i>	170
8.4	<i>Two Strategies For Handling Channel Errors</i>	171
8.5	<i>Block And Convolutional Error Codes</i>	172
8.6	<i>An Example Block Error Code: Single Parity Checking</i>	173
8.7	<i>The Mathematics Of Block Error Codes And (n,k) Notation</i>	174
8.8	<i>Hamming Distance: A Measure Of A Code's Strength</i>	174
8.9	<i>The Hamming Distance Among Strings In A Codebook</i>	175
8.10	<i>The Tradeoff Between Error Detection And Overhead</i>	176
8.11	<i>Error Correction With Row And Column (RAC) Parity</i>	176
8.12	<i>The 16-Bit Checksum Used In The Internet</i>	178
8.13	<i>Cyclic Redundancy Codes (CRCs)</i>	179
8.14	<i>An Efficient Hardware Implementation Of CRC</i>	182
8.15	<i>Automatic Repeat Request (ARQ) Mechanisms</i>	182
8.16	<i>Summary</i>	183

Chapter 9 Transmission Modes

187

- 9.1 Introduction 187
- 9.2 A Taxonomy Of Transmission Modes 187
- 9.3 Parallel Transmission 188
- 9.4 Serial Transmission 189
- 9.5 Transmission Order: Bits And Bytes 190
- 9.6 Timing Of Serial Transmission 190
- 9.7 Asynchronous Transmission 191
- 9.8 RS-232 Asynchronous Character Transmission 191
- 9.9 Synchronous Transmission 192
- 9.10 Bytes, Blocks, And Frames 193
- 9.11 Isochronous Transmission 194
- 9.12 Simplex, Half-Duplex, And Full-Duplex Transmission 194
- 9.13 DCE And DTE Equipment 196
- 9.14 Summary 196

Chapter 10 Modulation And Modems

199

- 10.1 Introduction 199
- 10.2 Carriers, Frequency, And Propagation 199
- 10.3 Analog Modulation Schemes 200
- 10.4 Amplitude Modulation 200
- 10.5 Frequency Modulation 201
- 10.6 Phase Shift Modulation 202
- 10.7 Amplitude Modulation And Shannon's Theorem 202
- 10.8 Modulation, Digital Input, And Shift Keying 202
- 10.9 Phase Shift Keying 203
- 10.10 Phase Shift And A Constellation Diagram 205
- 10.11 Quadrature Amplitude Modulation 207
- 10.12 Modem Hardware For Modulation And Demodulation 208
- 10.13 Optical And Radio Frequency Modems 208
- 10.14 Dialup Modems 209
- 10.15 QAM Applied To Dialup 209
- 10.16 V.32 And V.32bis Dialup Modems 210
- 10.17 Summary 211

Chapter 11 Multiplexing And Demultiplexing (Channelization)

215

- 11.1 Introduction 215
- 11.2 The Concept Of Multiplexing 215
- 11.3 The Basic Types Of Multiplexing 216
- 11.4 Frequency Division Multiplexing (FDM) 217

11.5	<i>Using A Range Of Frequencies Per Channel</i>	219
11.6	<i>Hierarchical FDM</i>	220
11.7	<i>Wavelength Division Multiplexing (WDM)</i>	221
11.8	<i>Time Division Multiplexing (TDM)</i>	221
11.9	<i>Synchronous TDM</i>	222
11.10	<i>Framing Used In The Telephone System Version Of TDM</i>	223
11.11	<i>Hierarchical TDM</i>	224
11.12	<i>The Problem With Synchronous TDM: Unfilled Slots</i>	224
11.13	<i>Statistical TDM</i>	225
11.14	<i>Inverse Multiplexing</i>	226
11.15	<i>Code Division Multiplexing</i>	227
11.16	<i>Summary</i>	229

Chapter 12 Access And Interconnection Technologies

233

12.1	<i>Introduction</i>	233
12.2	<i>Internet Access Technology: Upstream And Downstream</i>	233
12.3	<i>Narrowband And Broadband Access Technologies</i>	234
12.4	<i>The Local Loop And ISDN</i>	236
12.5	<i>Digital Subscriber Line (DSL) Technologies</i>	236
12.6	<i>Local Loop Characteristics And Adaptation</i>	237
12.7	<i>The Data Rate Of ADSL</i>	238
12.8	<i>ADSL Installation And Splitters</i>	239
12.9	<i>Cable Modem Technologies</i>	239
12.10	<i>The Data Rate Of Cable Modems</i>	240
12.11	<i>Cable Modem Installation</i>	240
12.12	<i>Hybrid Fiber Coax</i>	241
12.13	<i>Access Technologies That Employ Optical Fiber</i>	242
12.14	<i>Head-End And Tail-End Modem Terminology</i>	242
12.15	<i>Wireless Access Technologies</i>	243
12.16	<i>High-Capacity Connections At The Internet Core</i>	243
12.17	<i>Circuit Termination, DSU/CSU, And NIU</i>	244
12.18	<i>Telephone Standards For Digital Circuits</i>	245
12.19	<i>DS Terminology And Data Rates</i>	246
12.20	<i>Highest Capacity Circuits (STS Standards)</i>	246
12.21	<i>Optical Carrier Standards</i>	247
12.22	<i>The C Suffix</i>	247
12.23	<i>Synchronous Optical Network (SONET)</i>	248
12.24	<i>Summary</i>	249

PART III Packet Switching And Network Technologies

Chapter 13 Local Area Networks: Packets, Frames, And Topologies 253

- 13.1 Introduction 253
- 13.2 Circuit Switching And Analog Communication 254
- 13.3 Packet Switching 255
- 13.4 Local And Wide Area Packet Networks 256
- 13.5 Standards For Packet Format And Identification 257
- 13.6 IEEE 802 Model And Standards 258
- 13.7 Point-To-Point And Multi-Access Networks 259
- 13.8 LAN Topologies 261
- 13.9 Packet Identification, Demultiplexing, MAC Addresses 263
- 13.10 Unicast, Broadcast, And Multicast Addresses 264
- 13.11 Broadcast, Multicast, And Efficient Multi-Point Delivery 265
- 13.12 Frames And Framing 266
- 13.13 Byte And Bit Stuffing 267
- 13.14 Summary 268

Chapter 14 The IEEE MAC Sublayer 273

- 14.1 Introduction 273
- 14.2 A Taxonomy Of Mechanisms For Shared Access 273
- 14.3 Static And Dynamic Channel Allocation 274
- 14.4 Channelization Protocols 275
- 14.5 Controlled Access Protocols 276
- 14.6 Random Access Protocols 278
- 14.7 Summary 284

Chapter 15 Wired LAN Technology (Ethernet And 802.3) 287

- 15.1 Introduction 287
- 15.2 The Venerable Ethernet 287
- 15.3 Ethernet Frame Format 288
- 15.4 Ethernet Frame Type Field And Demultiplexing 288
- 15.5 IEEE's Version Of Ethernet (802.3) 289
- 15.6 LAN Connections And Network Interface Cards 290
- 15.7 Ethernet Evolution And Thicknet Wiring 290
- 15.8 Thinnet Ethernet Wiring 291
- 15.9 Twisted Pair Ethernet Wiring And Hubs 292
- 15.10 Physical And Logical Ethernet Topology 293
- 15.11 Wiring In An Office Building 293

- 15.12 Ethernet Data Rates And Cable Types 295
- 15.13 Twisted Pair Connectors And Cables 295
- 15.14 Summary 296

Chapter 16 Wireless Networking Technologies

299

- 16.1 Introduction 299
- 16.2 A Taxonomy Of Wireless Networks 299
- 16.3 Personal Area Networks (PANs) 300
- 16.4 ISM Wireless Bands Used By LANs And PANs 301
- 16.5 Wireless LAN Technologies And Wi-Fi 301
- 16.6 Spread Spectrum Techniques 302
- 16.7 Other Wireless LAN Standards 303
- 16.8 Wireless LAN Architecture 304
- 16.9 Overlap, Association, And 802.11 Frame Format 305
- 16.10 Coordination Among Access Points 306
- 16.11 Contention And Contention-Free Access 306
- 16.12 Wireless MAN Technology And WiMax 308
- 16.13 PAN Technologies And Standards 310
- 16.14 Other Short-Distance Communication Technologies 311
- 16.15 Wireless WAN Technologies 312
- 16.16 Micro Cells 314
- 16.17 Cell Clusters And Frequency Reuse 314
- 16.18 Generations Of Cellular Technologies 316
- 16.19 VSAT Satellite Technology 318
- 16.20 GPS Satellites 319
- 16.21 Software Defined Radio And The Future Of Wireless 320
- 16.22 Summary 321

Chapter 17 Repeaters, Bridges, And Switches

325

- 17.1 Introduction 325
- 17.2 Distance Limitation And LAN Design 325
- 17.3 Fiber Modem Extensions 326
- 17.4 Repeaters 327
- 17.5 Bridges And Bridging 327
- 17.6 Learning Bridges And Frame Filtering 328
- 17.7 Why Bridging Works Well 329
- 17.8 Distributed Spanning Tree 330
- 17.9 Switching And Layer 2 Switches 331
- 17.10 VLAN Switches 333
- 17.11 Multiple Switches And Shared VLANs 334
- 17.12 The Importance Of Bridging 335
- 17.13 Summary 336

Chapter 18 WAN Technologies And Dynamic Routing 339

- 18.1 Introduction 339
- 18.2 Large Spans And Wide Area Networks 339
- 18.3 Traditional WAN Architecture 340
- 18.4 Forming A WAN 342
- 18.5 Store And Forward Paradigm 343
- 18.6 Addressing In A WAN 343
- 18.7 Next-Hop Forwarding 344
- 18.8 Source Independence 347
- 18.9 Dynamic Routing Updates In A WAN 347
- 18.10 Default Routes 348
- 18.11 Forwarding Table Computation 349
- 18.12 Distributed Route Computation 350
- 18.13 Shortest Paths And Weights 354
- 18.14 Routing Problems 355
- 18.15 Summary 356

Chapter 19 Networking Technologies Past And Present 359

- 19.1 Introduction 359
- 19.2 Connection And Access Technologies 359
- 19.3 LAN Technologies 361
- 19.4 WAN Technologies 362
- 19.5 Summary 366

PART IV Internetworking

Chapter 20 Internetworking: Concepts, Architecture, And Protocols 369

- 20.1 Introduction 369
- 20.2 The Motivation For Internetworking 369
- 20.3 The Concept Of Universal Service 370
- 20.4 Universal Service In A Heterogeneous World 370
- 20.5 Internetworking 371
- 20.6 Physical Network Connection With Routers 371
- 20.7 Internet Architecture 372
- 20.8 Intranets And Internets 373
- 20.9 Achieving Universal Service 373
- 20.10 A Virtual Network 373
- 20.11 Protocols For Internetworking 375
- 20.12 Review Of TCP/IP Layering 375

20.13 *Host Computers, Routers, And Protocol Layers* 376

20.14 *Summary* 376

Chapter 21 IP: Internet Addressing

379

21.1 *Introduction* 379

21.2 *The Move To IPv6* 379

21.3 *The Hourglass Model And Difficulty Of Change* 380

21.4 *Addresses For The Virtual Internet* 380

21.5 *The IP Addressing Scheme* 382

21.6 *The IP Address Hierarchy* 382

21.7 *Original Classes Of IPv4 Addresses* 383

21.8 *IPv4 Dotted Decimal Notation* 384

21.9 *Authority For Addresses* 385

21.10 *IPv4 Subnet And Classless Addressing* 385

21.11 *Address Masks* 387

21.12 *CIDR Notation Used With IPv4* 388

21.13 *A CIDR Example* 388

21.14 *CIDR Host Addresses* 390

21.15 *Special IPv4 Addresses* 391

21.16 *Summary Of Special IPv4 Addresses* 393

21.17 *IPv4 Berkeley Broadcast Address Form* 393

21.18 *Routers And The IPv4 Addressing Principle* 394

21.19 *Multihomed Hosts* 395

21.20 *IPv6 Multihoming And Network Renumbering* 395

21.21 *IPv6 Addressing* 396

21.22 *IPv6 Colon Hexadecimal Notation* 397

21.23 *Summary* 398

Chapter 22 Datagram Forwarding

403

22.1 *Introduction* 403

22.2 *Connectionless Service* 403

22.3 *Virtual Packets* 404

22.4 *The IP Datagram* 404

22.5 *The IPv4 Datagram Header Format* 405

22.6 *The IPv6 Datagram Header Format* 407

22.7 *IPv6 Base Header Format* 407

22.8 *Forwarding An IP Datagram* 409

22.9 *Network Prefix Extraction And Datagram Forwarding* 410

22.10 *Longest Prefix Match* 411

22.11 *Destination Address And Next-Hop Address* 412

22.12 *Best-Effort Delivery* 412

22.13	<i>IP Encapsulation</i>	413
22.14	<i>Transmission Across An Internet</i>	414
22.15	<i>MTU And Datagram Fragmentation</i>	415
22.16	<i>Fragmentation Of An IPv6 Datagram</i>	417
22.17	<i>Reassembly Of An IP Datagram From Fragments</i>	418
22.18	<i>Collecting The Fragments Of A Datagram</i>	419
22.19	<i>The Consequence Of Fragment Loss</i>	420
22.20	<i>Fragmenting An IPv4 Fragment</i>	420
22.21	<i>Summary</i>	421

Chapter 23 Support Protocols And Technologies

425

23.1	<i>Introduction</i>	425
23.2	<i>Address Resolution</i>	425
23.3	<i>An Example Of IPv4 Addresses</i>	427
23.4	<i>The IPv4 Address Resolution Protocol (ARP)</i>	427
23.5	<i>ARP Message Format</i>	428
23.6	<i>ARP Encapsulation</i>	429
23.7	<i>ARP Caching And Message Processing</i>	430
23.8	<i>The Conceptual Address Boundary</i>	432
23.9	<i>Internet Control Message Protocol (ICMP)</i>	433
23.10	<i>ICMP Message Format And Encapsulation</i>	434
23.11	<i>IPv6 Address Binding With Neighbor Discovery</i>	435
23.12	<i>Protocol Software, Parameters, And Configuration</i>	435
23.13	<i>Dynamic Host Configuration Protocol (DHCP)</i>	436
23.14	<i>DHCP Protocol Operation And Optimizations</i>	437
23.15	<i>DHCP Message Format</i>	438
23.16	<i>Indirect DHCP Server Access Through A Relay</i>	439
23.17	<i>IPv6 Autoconfiguration</i>	439
23.18	<i>Network Address Translation (NAT)</i>	440
23.19	<i>NAT Operation And IPv4 Private Addresses</i>	441
23.20	<i>Transport-Layer NAT (NAPT)</i>	443
23.21	<i>NAT And Servers</i>	444
23.22	<i>NAT Software And Systems For Use At Home</i>	444
23.23	<i>Summary</i>	445

Chapter 24 UDP: Datagram Transport Service

449

24.1	<i>Introduction</i>	449
24.2	<i>Transport Protocols And End-To-End Communication</i>	449
24.3	<i>The User Datagram Protocol</i>	450
24.4	<i>The Connectionless Paradigm</i>	451
24.5	<i>Message-Oriented Interface</i>	451

- 24.6 *UDP Communication Semantics* 452
- 24.7 *Modes Of Interaction And Multicast Delivery* 453
- 24.8 *Endpoint Identification With Protocol Port Numbers* 453
- 24.9 *UDP Datagram Format* 454
- 24.10 *The UDP Checksum And The Pseudo Header* 455
- 24.11 *UDP Encapsulation* 455
- 24.12 *Summary* 456

Chapter 25 TCP: Reliable Transport Service

459

- 25.1 *Introduction* 459
- 25.2 *The Transmission Control Protocol* 459
- 25.3 *The Service TCP Provides To Applications* 460
- 25.4 *End-To-End Service And Virtual Connections* 461
- 25.5 *Techniques That Transport Protocols Use* 462
- 25.6 *Techniques To Avoid Congestion* 466
- 25.7 *The Art Of Protocol Design* 467
- 25.8 *Techniques Used In TCP To Handle Packet Loss* 468
- 25.9 *Adaptive Retransmission* 469
- 25.10 *Comparison Of Retransmission Times* 470
- 25.11 *Buffers, Flow Control, And Windows* 471
- 25.12 *TCP's Three-Way Handshake* 472
- 25.13 *TCP Congestion Control* 474
- 25.14 *Versions Of TCP Congestion Control* 475
- 25.15 *Other Variations: SACK And ECN* 475
- 25.16 *TCP Segment Format* 476
- 25.17 *Summary* 477

Chapter 26 Internet Routing And Routing Protocols

481

- 26.1 *Introduction* 481
- 26.2 *Static Vs. Dynamic Routing* 481
- 26.3 *Static Routing In Hosts And A Default Route* 482
- 26.4 *Dynamic Routing And Routers* 483
- 26.5 *Routing In The Global Internet* 484
- 26.6 *Autonomous System Concept* 485
- 26.7 *The Two Types Of Internet Routing Protocols* 485
- 26.8 *Routes And Data Traffic* 488
- 26.9 *The Border Gateway Protocol (BGP)* 488
- 26.10 *The Routing Information Protocol (RIP)* 490
- 26.11 *RIP Packet Format* 491
- 26.12 *The Open Shortest Path First Protocol (OSPF)* 492
- 26.13 *An Example OSPF Graph* 493

- 26.14 OSPF Areas 493
- 26.15 Intermediate System - Intermediate System (IS-IS) 494
- 26.16 Multicast Routing 495
- 26.17 Summary 499

PART V Other Networking Concepts & Technologies

Chapter 27 Network Performance (QoS And DiffServ) 503

- 27.1 Introduction 503
- 27.2 Measures Of Performance 503
- 27.3 Latency Or Delay 504
- 27.4 Capacity, Throughput, And Goodput 506
- 27.5 Understanding Throughput And Delay 507
- 27.6 Jitter 508
- 27.7 The Relationship Between Delay And Throughput 509
- 27.8 Measuring Delay, Throughput, And Jitter 510
- 27.9 Passive Measurement, Small Packets, And NetFlow 512
- 27.10 Quality Of Service (QoS) 513
- 27.11 Fine-Grain And Coarse-Grain QoS 514
- 27.12 Implementation Of QoS 516
- 27.13 Internet QoS Technologies 518
- 27.14 Summary 519

Chapter 28 Multimedia And IP Telephony (VoIP) 523

- 28.1 Introduction 523
- 28.2 Real-Time Data Transmission And Best-Effort Delivery 523
- 28.3 Delayed Playback And Jitter Buffers 524
- 28.4 Real-Time Transport Protocol (RTP) 525
- 28.5 RTP Encapsulation 526
- 28.6 IP Telephony 527
- 28.7 Signaling And VoIP Signaling Standards 528
- 28.8 Components Of An IP Telephone System 529
- 28.9 Summary Of Protocols And Layering 532
- 28.10 H.323 Characteristics 533
- 28.11 H.323 Layering 533
- 28.12 SIP Characteristics And Methods 534
- 28.13 An Example SIP Session 535
- 28.14 Telephone Number Mapping And Routing 536
- 28.15 Summary 537

Chapter 29 Network Security

541

- 29.1 Introduction 541
- 29.2 Criminal Exploits And Attacks 541
- 29.3 Security Policy 545
- 29.4 Responsibility And Control 546
- 29.5 Security Technologies 547
- 29.6 Hashing: An Integrity And Authentication Mechanism 547
- 29.7 Access Control And Passwords 548
- 29.8 Encryption: A Fundamental Security Technique 548
- 29.9 Private Key Encryption 549
- 29.10 Public Key Encryption 549
- 29.11 Authentication With Digital Signatures 550
- 29.12 Key Authorities And Digital Certificates 551
- 29.13 Firewalls 553
- 29.14 Firewall Implementation With A Packet Filter 554
- 29.15 Intrusion Detection Systems 556
- 29.16 Content Scanning And Deep Packet Inspection 556
- 29.17 Virtual Private Networks (VPNs) 557
- 29.18 The Use of VPN Technology For Telecommuting 559
- 29.19 Packet Encryption Vs. Tunneling 560
- 29.20 Security Technologies 562
- 29.21 Summary 563

Chapter 30 Network Management (SNMP)

567

- 30.1 Introduction 567
- 30.2 Managing An Intranet 567
- 30.3 FCAPS: The Industry Standard Model 568
- 30.4 Example Network Elements 570
- 30.5 Network Management Tools 570
- 30.6 Network Management Applications 572
- 30.7 Simple Network Management Protocol 573
- 30.8 SNMP's Fetch-Store Paradigm 573
- 30.9 The SNMP MIB And Object Names 574
- 30.10 The Variety Of MIB Variables 575
- 30.11 MIB Variables That Correspond To Arrays 575
- 30.12 Summary 576

Chapter 31 Software Defined Networking (SDN)

579

- 31.1 Introduction 579
- 31.2 Marketing Hype And Reality 579
