前言

本书为 English For Investors (投资者英语系列教程)的第1册。书中课文和阅读材料主要选自美国近年出版的有关证券书籍,旨在帮助读者提高阅读证券英语书刊的能力,扩大证券英语词汇量,丰富证券业务知识。

本书共分 12 个单元,2 个附录。课文和阅读材料均选自国外有关近作,除个别地方为使上下文衔接紧凑而略作修改外,尽量保持原作风格。每篇课文后均有 Word Study,以便读者掌握更多的证券英语词汇;每单元后还有阅读材料,以便读者扩大证券业务知识面。书末附有课文译文,聊供读者参考。附录一《股市透视》(Market Scan)意在帮助读者掌握股市分析基本技术。附录二《中国证券法概述》(Summary of PRC Securities Laws)旨在帮助读者了解有关法律,但仅供一般参考,如要正式引用,须以中国政府最新颁布的证券法规为准。

限于编者的水平,加以时间仓促,错误之处祈请各位读者和同行予以批评指正。

编 者 1993年7月

Investing in Stock

Suppose you want to become a stockholder of IBM, General Motors, McDonald's, or some other company. How do you buy shares?

First, you call a brokerage house and talk to one of the company's registered representatives, or account executives, as these salespersons are frequently called.

"Well," says the representative, "I'm certainly glad you thought of our company. But what are your investment plans?"

"I want to buy five shares of IBM," you say eagerly.

"As you probably know, you must open an account with our firm before you can buy or sell any stock. I will send you the necessary forms right away. Please sign them and return them as soon as possible. Then you can place your order for the IBM stock," says the representative encouragingly.

Many beginning investors make their mistake at this point. They simply say "Thank you" and sit back and wait for the mail. Given the close personal relationship between the broker and the client and the large sums of money involved, they would be better off arranging a personal interview. By meeting with the representative, the investor gets a better idea of how the two of them will work together and a close-up view of the firm's facilities.

Brokerage offices almost look the same. They have a large open room, usually called a boardroom, filled with desks for the representatives. Letters and numbers describing the ups and downs of the stock market silently slide across the long, narrow sign on the front wall of each office. Whenever anyone buys or sells shares of a company listed on an exchange, the news of the transaction appears on this tape. By the way, the word "tape" is a holdcover from the old days when brokerage offices all had paper tape rather than electronic displays.

Some of the letters and numbers moving across the tape are:

PRD 38 X 2_s56 GM 8_s70&M

To save time and space, the tape carries abbreviations instead of the full name of the companies. PRD stands for Polaroid. One hundred shares just sold at \$38 a share. The X represents U. S. Steel. Spectators can always tell the oldest and best-known companies by their symbols — they usually have only one letter. According to the tape, 200 shares of U. S. Steel just traded at \$56 a share — the "2s" in front of the "56" indicates the vol-

ume. The next symbol always receives instant recognition. It is "GM" for General Motors, and 800 shares just sold at \$70 a share. The "M" after "&" indicates that the GM trade took place on the Midwest Stock Exchange rather than the NYSE.

Investors have a great deal of flexibility in placing their orders. If they simply instruct their broker to buy or sell shares at market, the order is executed almost immediately at the best price available.

Some investors use limit orders rather than market orders. For example, they might ask the broker to buy 100 shares of GM for \$52 or less. With a limit order they know they will never pay more than the specified price. With a market order, they could theoretically end up paying almost any price.

Actually, stock prices seldom fluctuate by more than a fraction of a point during the few minutes required to fill a market order. But cautious investors prefer limit orders, especially in inactive securities. And they usually pay a lower price because of their willingness to wait. Of course, they also run the risk of letting the stock "get away" from them when the price moves past their limit.

Many other uncertainties can cloud the investment when an investor buys a security. For example, if the issuer of the stock becomes financially troubled, financial risk threatens not only the interest and dividend income from the investment, but also the principal amount. If the issuer's physical assets were destroyed and if the loss were not properly covered by insurance, the value of the issuer's stocks would diminish.

In spite of the uncertainties, 1 in every 6 American adults has a staggering sum of money invested in stocks. What for? Spectacular gains.

Exercises

- I. Answer the following questions:
 - 1. How does an investor open an account?
 - 2. Where do many beginning investors usually make their mistake?
 - 3. Before opening an account at a brokerage house, investors should always meet with whom? why?
 - 4. What are the advantages and disadvantages of using a market order? What about limit orders?
 - 5. What are the uncertainties that can cloud the investment when an investor buys a stock?
 - 6. Why does the tap carry only abbreviations of the companies?

- 7. What does "2s.56" indicate on the tape?
- 8. Which investment do you prefer, stocks or gold?
- II. Give the meaning of the following phrases formed with broker, dividend, issue, share and stock:
 - 1. commodity broker exchange broker floor broker pawn broker real estate broker insurance broker
 - 2. capital dividend cash dividend disguised dividend ex-dividend regular dividend dividend yield
 - 3. glamor (stock) issue par issue stock issue term issue initial issue bonus (share) issue
 - 4. active share amusement share blue chip share common share fractional share growth share
 - 5. barometer stock commercial stock housing stock kiting stocks long stock watered stock
- III. Translate the following English sentences into Chinese:
 - 1. In spite of the uncertainties, 1 in every 6 American adults has a staggering sum of money invested in stocks.
 - 2. By meeting with the representative, the investor gets a better idea of how the two of them will work together and a close-up view of the firm's facilities.
 - 3. Letters and numbers describing the ups and downs of the stock market silently slide across the sign on the front wall.
 - 4. To save time and space, the tape carries abbreviations instead of the full name of the company.
 - 5. Investors have a great deal of flexibility in placing their orders.
 - 6. Some use limit orders rather than market orders.
 - 7. Stock prices seldom fluctuate by more than a fraction of a point during the few minutes required to fill a market order.
 - 8. Many other uncertainties can cloud the investment when an investor buys a security.
 - 9. If the issuer's loss were not properly covered by insurance, the value of the issuer's stocks would diminish.
 - 10. Cautious investors prefer limit orders in inactive securities

Reading Material

Wise Investor's Selection

The earnings and dividends on common stock are not fixed by contract but are determined by the success of the business. Since the common stockholders are the owners of the

business, they receive the profits, but they also assume the risk of loss. The stokholder has the right to receive a certificate as evidence of ownership, to receive dividends, to vote on corporate matters, and in many states, to maintain a proportionate share in earnings, assets, and voting control through the preemptive right.

Preferred stock has prior claim on the assets of the corporation over common stock if the company should be dissolved, liquidated, or merged. Preferred stock also has prior claim on the earnings of the company, and dividends on preferred stock must be paid before those on common stock. Preferred stock offers two promises: (1) a return on par or a stated value in liquidation and (2) a secure dividend superior in claim to the common stock dividend. Preferred stock is usually nonpaticipating in the earnings of the company, but the earnings are frequently cumulative. Preferred stock is nonvoting and has no maturity date, but a sinking fund and a call feature are often provided for possible retirement of the stock. Some investors consider preferred stock a hybrid security possessing all the disadvantages of debt and none of the advantages of the common stock. However, high-grade preferred stocks offer stable income and security of principal and are not as risky as common stock.

Convertible preferred stocks offer not only income but also the opportunity to share in the profits of the company. They are excellent securities for safety of income. They usually pay a higher dividend than common stocks, and they offer the possibilities of appreciation.

Wise investors can combine a diversified selection of individual securities to form a portfolio. Professional investment managers have formed portfolios called mutual funds, which offer another investment alternative. A judicious person can select one or more of the various kinds of mutual fund investment and enjoy the benefits of wide diversification with only a small investment.

New Words & Expressions

Unit 2

Types of Common Stock

Four types of common stock available for investments are blue chip, growth, income and speculative.

Blue Chip Stocks. The term "blue chip" is related to poker, where blue chips have the highest values. Firms whose stocks are blue chip are highly stable and financially strong. Blue chip firms are generally the industry leaders in their product or service markets. They have a long, established history of earnings and dividend payments. The firms have wise managements who do not subject the firms to unnecessary risks. Because of their stability in earnings, blue chip firms are looked upon to provide their stockholders fairly stable returns. That is, blue chip stocks have a history of consistent annual dividend payments. Because investors have very high confidence in blue chip firms, their stocks sell at P/E ratios that are higher than other firms in their industries. Examples of blue chips are Exxon, General Electric and IBM. Blue chip stocks are characterized by low risk, average dividend yields, and average potential for capital gains.

Growth Stocks. Firms whose sales and earnings have grown rapidly for several years in a row and who are expected to sustain the high growth rates are called growth firms. By definition, their growth rates have to be higher than those for the economy as well as for their industries. Growth companies typically are in high technology areas. There are exceptions to this rule. Fast-food retailing and general merchandising, for example, are not technology dependent, yet growth-oriented Mc Donald's and K-Mart come from these industries.

Growth firms have great need for money to finance their expansions. Consequently, growth firms choose to retain most of their earnings and have low dividend payout ratios. Dividend yields on growth stocks are low. However, the potential for capital gains is very high. The prices of growth stocks tend to fluctuate a lot, making them relatively high risk investments.

Income Stocks. Income stocks, as the name implies are characterized by high dividend yields. However, not all high dividend yielding stocks are income stocks. Income stocks are generally very safe investments. They are attractive for persons seeking a steady income with low levels of risk. Some stocks have high yields because their prices are low due to possible future bad news. For example, the price may be low and the yield high for stock of an oil company that may have its overseas assets nationalized. The high yield here

would reflect the very high risk for the investor.

Income stocks are also called mature stocks. Mature firms are in low-growth industries. Their potential for growth in sales and earnings is low. As a result they have high dividend payout ratios. Income stocks have high yields, low potential for capital gains and relatively low risk. Examples of income stocks are American Telephone and Telegraph and other utilities.

Speculative Stocks. Speculative stocks are characterized by the potential of very high returns. Speculative stocks are also highly risky. Many speculative stocks are "glamour" stocks, that is, investors have a belief that there is something special about the firms. Some years ago, firms with the syllable "tronics" in their names were considered to be glamour stocks. Recently, computing manufacturing firms have been regarded as glamour firms.

Some firms may be desirable because investors are speculating that these firms will be taken over by other firms. Sometimes investors are attracted to those firms whose assets are expected to appreciate in value. Some gold and silver mining stocks fall in this category. Any variety of reasons may attract investors to speculative stocks. The driving force for investments in speculative stocks is potential for very high gains. Speculative stocks seem to go in and out of investor favor. As such, they tend to be high risk investments.

Besides the categories of stocks discussed above, investors occasionally mention cyclic and defensive stocks. Cyclic firms are those whose sales and earnings fluctuate with the economy. Many of the blue chip stocks fall in this category. Defensive stocks belong to firms whose earnings do not change with changes in economic activity. Many income stocks fall in this category.

New Words & Expressions

blue chip stocks 蓝筹码股 growth stocks 成长股 income stocks 收益股 speculative stocks 投机股. cyclic stocks 股份循环股 defensive stocks 防守性股 poker / pauka/ n. 扑克牌游戏 divident payments 分派股息;分红派息 dividend yields 股息收入。 potential for capital gains 资本收益潜力 (可能) 接连

Analysis for Investing

There are probably as many different investment philosophies as there are investors, but all of the available advice can be boiled down to one simple truism — the object is to "buy low, and sell high". Half of this object can be accomplished by identifying and purchasing undervalued securities. These "bargain" securities are those selling for less than other securities with similar earnings records, growth potential, and risk characteristics.

In buying undervalued securities, it is the investor's expectation that ultimately other investors will recognize these bargains and start buying them. The buying by investors will force upward the prices of these undervalued securities, thereby producing healthy profits for those investors who correctly identified the undervaluation.

Another important aspect of analysis is the correct identification of the investment climate. For example, an investor may identify the undervalued nature of a particular stock and buy shares. Other investors may recognize the undervalued nature but they may not be feeling confident enough to invest money. In this case, the undervalued security will continue to remain undervalued.

Analysis for investing is a three-step process. First the investment climate needs to be analyzed. Next, the right industries should be identified. Last, 'undervalued securities in the right industries should be selected for investing.

The Investment Climate. Individual stocks, as well as the stock markets in general, react to the economic environment. News about inflation, war, unemployment, taxes, economic growth, etc., affects stock prices. Investors' perceptions or feelings about the economic environment make them optimistic or pessimistic about investing. The economic environment and the mood of investors in general form the investment climate. Investors should have a feel for the investment climate before making investment decisions. Business and financial publications are excellent sources for information on economic and investment trends.

The Leading Industries. The second step is to identify the leading industries, those industries whose prospects for profits and growth are outstanding. For example, in recent years the mineral extraction or mining industry has done very well. The reason is that oil companies, in efforts to diversify, have been seeking out mining firms to buy. Similarly, at one time the electronics industry was considered to be desirable for investing. The leading industries tend to change over time. Again, business periodicals and investment advisory services are excellent sources for identifying leading industries.

Undervalued Securities. Once the leading industries have been identified, the next step is to find undervalued securities in these industries. Undervalued securities have the
