出版者的话

文艺复兴以降,源远流长的科学精神和逐步形成的学术规范,使西方国家在自然科学的各个领域中取得了垄断性的优势;也正是这样的传统,使美国在信息技术发展的六十多年间名家辈出、独领风骚。在商业化的进程中,美国的产业界与教育界越来越紧密地结合,信息学科中的许多泰山北斗同时身处科研和教学的最前线,由此而产生的经典科学著作,不仅肇发了研究的范畴,还揭示了学术的源变,既遵循学术规范,又自有学者个性,其价值并不会因年月的流逝而减退。

近年,在全球信息化大潮的推动下,我国的信息产业发展迅猛,对专业人才的需求日益迫切。这对我国教育界和出版界都既是机遇,也是挑战;而专业教材的建设在教育战略上显得举足轻重。在我国信息技术发展时间较短的现状下,美国等发达国家在其信息科学发展的几十年间积淀和发展的经典教材仍有许多值得借鉴之处。因此,引进一批国外优秀教材将对我国教育事业的发展起到积极的推动作用,也是与世界接轨、建设真正的世界一流大学的必由之路。

机械工业出版社华章公司较早意识到“出版要为教育服务”。自1998年开始,我们就将工作重点放在了遴选、移译国外优秀教材上。经过多年的不懈努力,我们与Pearson, McGraw-Hill, John Wiley & Sons, Elsevier, Cambridge等世界著名出版公司建立了良好的合作关系,从他们现有的数百种教材中甄选出《Digital Design: Principles and Practices, 4E(数字设计原理与实践,原书第4版)》(John F. Wakerly著)、《Fundamentals of Digital Logic with Verilog Design(数字逻辑基础与Verilog设计)》(Stephen Brown著)、《Electromagnetic Field Theory Fundamentals, 2E(电磁场与电磁波,原书第2版)》(Bhag Singh Guru著)、《Fundamentals of Electric Circuits, 5E(电路基础,原书第5版、英文版第5版)》(Charles K. Alexander著)、《Digital Fundamentals: A Systems Approach(数字基础:系统方法)》(Thomas L. Floyd著)、《Introductory Circuit Analysis, 12E(电路分析导论,原书第12版,本科教学版)》(Robert L. Boylestad著)、《Foundations of MEMS, 2E(微机电系统基础(原书第2版))》(Chang Liu著)等大师名家的经典教材,以“国外电子电气经典教材系列”为总称出版,供读者学习、研究及珍藏。

权威的作者、经典的教材、一流的译者、严格的审校、精细的编辑,这些因素使我们的图书有了质量的保证。随着电子电气专业学科建设的不断完善和教材改革的逐渐深化,教育界对国外电子电气教材的需求和应用都将步入一个新的阶段,我们的目标是尽善尽美,而反馈的意见正是我们达到这一终极目标的重要帮助。华章公司欢迎老师和读者对我们的工作提出建议或给予指正,我们的联系方式如下:

华章科技图书出版中心

This book is dedicated to my current and former C++ students. You have inspired and helped me to continue to improve this book.

To Samantha, Michael, and Michelle

DEAR READER,

Many of you have provided feedback on previous editions of *Introduction to Programming with C++*, and your comments and suggestions have greatly improved the book. This edition has been substantially enhanced in presentation, organization, examples, exercises, and supplements—including the following:

- Reorganized sections and chapters present subjects in a logical order
- Many new interesting examples and exercises stimulate interest
- Introduction of the `string` type in Chapter 4 enables students to write programs using strings early
- Key Points at the beginning of each section highlight important concepts and materials
- Check Points at the end of each section verify the student's understanding of the material covered

Please visit www.cs.armstrong.edu/liang/cpp3e/correlation.html for a complete list of new features as well as correlations to the previous edition.

what's new?

This book teaches programming using a problem-driven method that focuses on problem solving rather than syntax. We make introductory programming interesting by using thought provoking problems in a broad context. The central thread of early chapters is on problem solving. Appropriate syntax and libraries are introduced to enable readers to write programs to solve problems. To support the teaching of programming in a problem-driven way, the book provides a wide variety of problems at various levels of difficulty to motivate students. To appeal to students in all majors, the problems cover many application areas, including math, science, business, finance, gaming, and animation.

problem driven

The book focuses on fundamentals first by introducing basic programming concepts and techniques before designing custom classes. The fundamental concepts and techniques of loops, functions, and arrays are the basis for programming. Building this strong foundation prepares students to learn object-oriented programming and advanced C++ programming.

fundamentals first

This book teaches C++. The fundamentals of problem solving and programming are the same regardless of which programming language you use. You can learn programming using any high-level programming language such as Python, Java, C++, or C#. Once you know how to program in one language, it is easy to pick up other languages, because the basic techniques for writing programs are the same.

The best way to teach programming is *by example*, and the only way to learn programming is *by doing*. Basic concepts are explained by example and many exercises with various levels of difficulty are provided for students to practice. In our programming courses, we assign programming exercises after each lecture.

examples and exercises

Our goal is to produce a text that teaches problem solving and programming in a broad context using a wide variety of interesting examples. If you have any comments or suggestions for improving this book, please email me.

Sincerely,

Y. Daniel Liang

PREFACE

What's New in This Edition?

This third edition substantially improves *Introduction to Programming with C++, Second Edition*. The major improvements are as follows:

- | | |
|-------------------------------------|--|
| complete revision | ■ A complete revision to enhance clarity, presentation, content, examples, and exercises |
| new examples and exercises | ■ New examples and exercises to motivate and stimulate student interest in programming |
| Key Points | ■ Key Points that highlight the important concepts covered in each section |
| Check Points | ■ Check Points that provide review questions to help students track their learning progress and evaluate their knowledge about a major concept or example |
| VideoNotes | ■ New VideoNotes that provide short video tutorials designed to reinforce the key concepts |
| string objects early | ■ Introduction of <code>string</code> objects in Chapter 4 to enable strings to be used in the early part of the book |
| simple IO early | ■ Introduction of simple input and output in Chapter 4 to enable students to write programs using files early |
| functions in one chapter | ■ Inclusion of functions in Chapter 6, which now covers all issues related to functions |
| common error sections | ■ Chapter sections on common errors and pitfalls to steer students away from common programming errors |
| simplified examples | ■ Replacement of complex examples with simpler ones (e.g., Solving the Sudoku problem in Chapter 8 is replaced by a problem of checking whether a solution is correct. The complete solution to the Sudoku problem is moved to the Companion Website.) |
| algorithm efficiency and techniques | ■ Expanded bonus Chapter 18 introduces algorithmic techniques: dynamic programming, divide-and-conquer, backtracking, and greedy algorithm with new examples to design efficient algorithms |
| C++11 | ■ Introduction of new C++11 features of <code>foreach</code> loops and auto type inference in the bonus chapters and of lambda functions in the supplements on the Companion Website |

Pedagogical Features

The book uses the following elements to help students gain the most from the material:

- The chapter **Objectives** list what students should learn so that they can determine whether they have met these objectives after completing the chapter.
- The chapter **Introduction** opens the discussion with representative problems to give the reader an overview of what to expect.
- **Key Points** highlight the important concepts covered in each section.
- **Check Points** provide review questions to help students track their progress as they read the chapter and evaluate their learning.
- **Problems and Case Studies**, carefully chosen and presented in an easy-to-follow style, teach problem solving and programming concepts. The book uses many small, simple, and stimulating examples to present important ideas.
- The **Chapter Summary** reviews the important subjects that students should understand and remember. It helps them reinforce the key concepts of the chapter.

- Self-test quizzes are available online through MyProgrammingLab (www.myprogramminglab.com) for students to self-test on programming concepts and techniques.
- **Programming Exercises**, grouped by sections, provide students with opportunities to apply their newly acquired skills. The level of difficulty is rated as easy (no asterisk), moderate (*), hard (**), or challenging (***). The trick of learning programming is practice, practice, and practice. To that end, the book provides numerous exercises.
- **Notes, Tips, Cautions, and Pedagogical Notes** are inserted throughout the text to offer valuable advice and insight on important aspects of program development.

**Note**

Provides additional information on the subject and reinforces important concepts.

**Tip**

Teaches good programming style and practice.

**Caution**

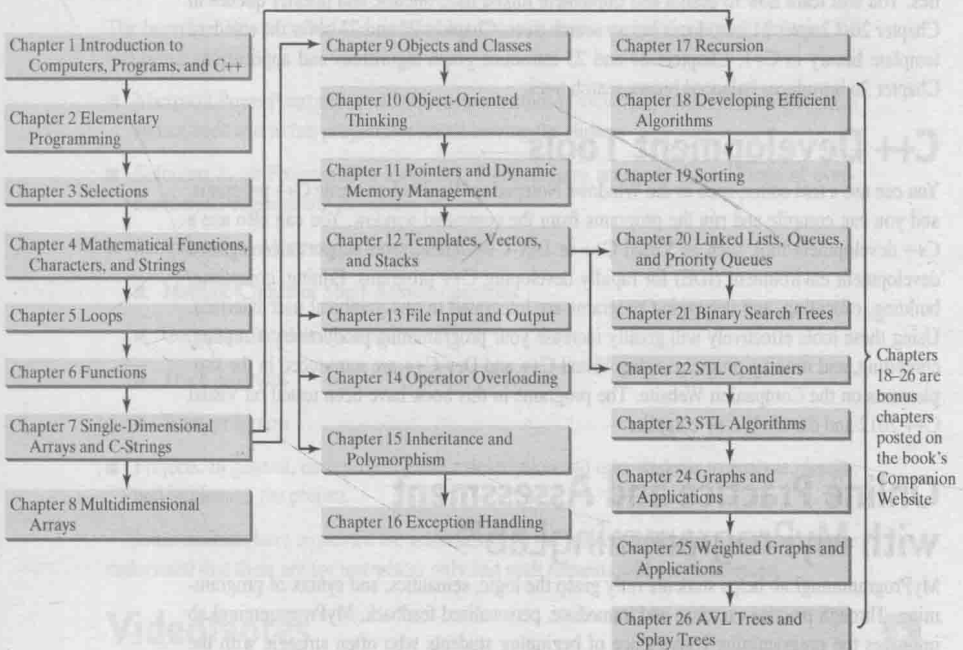

Helps students avoid the pitfalls of programming errors.

**Pedagogical Note**

Gives advice on how to use the materials in the book effectively.

Flexible Chapter Orderings

The book provides flexible chapter orderings, as shown in the following diagram:

Organization of the Book

The chapters can be grouped into three parts, which together form a solid introduction to problem solving and programming using C++.

Part I: Fundamentals of Programming (Chapters 1–8)

This part is a stepping-stone, which prepares you to embark on the journey of learning programming with C++. You will begin to know C++ (Chapter 1) and will learn elementary programming techniques with primitive data types, expressions, and operators (Chapter 2), selection statements (Chapter 3), mathematical functions, characters, and strings (Chapter 4), loops (Chapter 5), functions (Chapter 6), and arrays (Chapters 7–8).

Part II: Object-Oriented Programming (Chapters 9–16)

This part introduces object-oriented programming. C++ is an object-oriented programming language that uses abstraction, encapsulation, inheritance, and polymorphism to provide great flexibility, modularity, and reusability in developing software. You will learn programming with objects and classes (Chapter 9); design classes (Chapter 10); explore pointers and dynamic memory management (Chapter 11); develop generic classes using templates (Chapter 12); use IO classes for file input and output (Chapter 13); use operators to simplify functions (Chapter 14); define classes from base classes (Chapter 15); and create robust programs using exception handling (Chapter 16).

Part III: Algorithms and Data Structures (Chapter 17 and Bonus Chapters 18–26)

This part introduces the main subjects in a typical data structures course. Chapter 17 introduces recursion to write functions for solving inherently recursive problems. Chapter 18 introduces how to measure algorithm efficiency in order to choose an appropriate algorithm for applications. Chapter 19 presents various sorting algorithms and analyzes their complexities. You will learn how to design and implement linked lists, queues, and priority queues in Chapter 20. Chapter 21 introduces binary search trees. Chapters 22 and 23 cover the standard template library in C++. Chapters 24 and 25 introduce graph algorithms and applications. Chapter 26 introduces balanced binary search trees.

C++ Development Tools

You can use a text editor, such as the Windows Notepad or WordPad, to create C++ programs, and you can compile and run the programs from the command window. You can also use a C++ development tool, such as Visual C++ or Dev-C++. These tools support an integrated development environment (IDE) for rapidly developing C++ programs. Editing, compiling, building, executing, and debugging programs are integrated in one graphical user interface. Using these tools effectively will greatly increase your programming productivity. Creating, compiling, and running programs using Visual C++ and Dev-C++ are introduced in the supplements on the Companion Website. The programs in this book have been tested on Visual C++ 2012 and the GNU C++ compiler.

Online Practice and Assessment with MyProgrammingLab™

MyProgrammingLab helps students fully grasp the logic, semantics, and syntax of programming. Through practice exercises and immediate, personalized feedback, MyProgrammingLab improves the programming competence of beginning students who often struggle with the basic concepts and paradigms of popular high-level programming languages.

A self-study and homework tool, a MyProgrammingLab course consists of hundreds of small practice problems organized around the structure of this textbook. For students, the

system automatically detects errors in the logic and syntax of their code submissions and offers targeted hints that enable students to figure out what went wrong—and why. For instructors, a comprehensive gradebook tracks correct and incorrect answers and stores the code inputted by students for review.

MyProgrammingLab is offered to users of this book. For a full demonstration, to see feedback from instructors and students, or to get started using MyProgrammingLab in your course, visit www.myprogramminglab.com.

Student Resource Website

The Student Resource Website, accessible from www.pearsonhighered.com/liang, contains the following:

- Answers to Check Points
- Solutions to even-numbered Programming Exercises
- Source code for the examples
- Algorithm animations
- Errata

Supplements

The text covers the essential subjects. The supplements extend the text to introduce additional topics that might be of interest to readers. The supplements are available on the Companion Website (www.pearsonhighered.com/liang).

Instructor Resource Website

The Instructor Resource Website, accessible from www.pearsonhighered.com/liang, contains the following:

- Microsoft PowerPoint slides with interactive buttons to view full-color, syntax-highlighted source code and to run programs without leaving the slides.
- Solutions to all Programming Exercises. Students have access to the solutions of even-numbered Programming Exercises.
- Sample exams. Most exams have four parts:
 - Multiple-Choice or Short-Answer questions
 - Correct programming errors
 - Trace programs
 - Write programs
- Projects. In general, each project gives a description and asks students to analyze, design, and implement the project.

Some students have requested the materials from the Instructor Resource Website. Please understand that these are for instructors only and such requests will not be honored.

VideoNotes

Twenty percent of the VideoNotes in this edition are brand new! VideoNotes were introduced in the previous edition to provide additional help by presenting examples of key topics and to show how to solve problems completely, from design through coding. VideoNotes can

VideoNote

be accessed on the book's Companion Website using the student access code printed on the inside front cover of this book. If you have a used book, you can purchase access to the VideoNotes and other premium content through the Purchase link on the Companion Website (www.pearsonhighered.com/liang).

Acknowledgments

I would like to thank Armstrong Atlantic State University for enabling me to teach what I write and for supporting me to write what I teach. Teaching is the source of inspiration for continuing to improve the book. I am grateful to the instructors and students who have offered comments, suggestions, bug reports, and praise.

This book was greatly enhanced thanks to outstanding reviews for this and previous editions. The following reviewers contributed: Anthony James Allevato (Virginia Tech); Alton B. Coalter (University of Tennessee, Martin); Linda Cohen (Forsyth Tech); Frank David Ducrest (University of Louisiana, Lafayette); Waleed Farag (Indiana University of Pennsylvania); Max I. Fomitchev (Penn State University); Jon Hanrath (Illinois Institute of Technology); Michael Hennessy (University of Oregon); Debbie Kaneko (Old Dominion University); Henry Ledgard (University of Toledo); Brian Linard (University of California, Riverside); Dan Lipsa (Armstrong Atlantic State University); Jayantha Herath (St. Cloud State University); Daqing Hou (Clarkson University); Hui Liu (Missouri State University); Ronald Marsh (University of North Dakota); Peter Maurer (Baylor University); Jay McCarthy (Brigham Young University); Jay D. Morris (Old Dominion University); Charles Nelson (Rock Valley College); Ronald Del Porto (Pennsylvania State University); Mitch Pryor (University of Texas); Martha Sanchez (University of Texas at Dallas); William B. Seales (University of Kentucky); Kate Stewart (Tallahassee Community College); Ronald Taylor (Wright State University); Matthew Tennyson (Bradley University); David Topham (Ohlone College); Margaret Tseng (Montgomery College); and Barbara Tulley (Elizabethtown College).

It is a great pleasure, honor, and privilege to work with Pearson. I would like to thank Tracy Johnson and her colleagues Marcia Horton, Carole Snyder, Yez Alayan, Scott Disanno, Kayla Smith-Tarbox, Gillian Hall, and their colleagues for organizing, producing, and promoting this project.

As always, I am indebted to my wife, Samantha, for her love, support, and encouragement.

if Statements

```
if (condition)
{
    statements;
}
```

```
if (condition)
{
    statements;
}
else
{
    statements;
}
```

```
if (condition1)
{
    statements;
}
else if (condition2)
{
    statements;
}
else
{
    statements;
}
```

Loop Statements

```
while (condition)
{
    statements;
}

do
{
    statements;
} while (condition);
```

```
for (init; condition;
    adjustment)
{
    statements;
}
```

switch Statements

```
switch (intExpression)
{
    case value1:
        statements;
        break;
    ...
    case valueN:
        statements;
        break;
    default:
        statements;
}
```

Array/Initializer

```
int list[10];
int list[] = {1, 2, 3, 4};
```

Multidimensional Array/Initializer

```
int list[10][15];
int list[2][2] = {{1, 2}, {3, 4}};
```

Dynamic Memory Creation/Deletion

```
int* p1 = new int;
int* p2 = new int[10];
delete p1;
delete [] p2;
```

Frequently Used functions

time(0) returns current time
 srand(seed) sets a new seed for generating random numbers
 rand() returns a random integer
 pow(a, b) returns a^b

Character Functions

isdigit(c) returns true if c is a digit.
 isalpha(c) returns true if c is a letter.
 isalnum(c) returns true if c is a letter or a digit.
 islower(c) returns true if c is a lowercase letter.
 isupper(c) returns true if c is an uppercase letter.
 tolower(c) returns a lowercase for c.
 toupper(c) returns an uppercase for c.

C-String Functions

strlen returns string length
 strcpy copies a string
 strcat concatenate two strings
 strcmp compares two strings
 atoi converts a string to a long value
 itoa converts a integer a string

The string Class Member Functions

append appends new contents to the string
 insert inserts new contents to the string
 at retrieves character from the string
 [] string subscript operator
 length returns the length of the string.
 substr returns a substring from the string

CONTENTS

Chapter 1	Introduction to Computers, Programs, and C++	1
1.1	Introduction	2
1.2	What Is a Computer?	2
1.3	Programming Languages	9
1.4	Operating Systems	12
1.5	History of C++	13
1.6	A Simple C++ Program	14
1.7	C++ Program-Development Cycle	18
1.8	Programming Style and Documentation	20
1.9	Programming Errors	21
Chapter 2	Elementary Programming	29
2.1	Introduction	30
2.2	Writing a Simple Program	30
2.3	Reading Input from the Keyboard	32
2.4	Identifiers	35
2.5	Variables	35
2.6	Assignment Statements and Assignment Expressions	37
2.7	Named Constants	39
2.8	Numeric Data Types and Operations	40
2.9	Evaluating Expressions and Operator Precedence	45
2.10	Case Study: Displaying the Current Time	47
2.11	Augmented Assignment Operators	49
2.12	Increment and Decrement Operators	50
2.13	Numeric Type Conversions	52
2.14	Software Development Process	55
2.15	Case Study: Counting Monetary Units	59
2.16	Common Errors	61
Chapter 3	Selections	71
3.1	Introduction	72
3.2	The bool Data Type	72
3.3	if Statements	73
3.4	Two-Way if-else Statements	76
3.5	Nested if and Multi-Way if-else Statements	77
3.6	Common Errors and Pitfalls	79

Chapter 4	Mathematical Functions, Characters, and Strings	117
4.1	Introduction	118
4.2	Mathematical Functions	118
4.3	Character Data Type and Operations	122
4.4	Case Study: Generating Random Characters	126
4.5	Case Study: Guessing Birthdays	128
4.6	Character Functions	131
4.7	Case Study: Converting a Hexadecimal Digit to a Decimal Value	133
4.8	The string Type	134
4.9	Case Study: Revising the Lottery Program Using Strings	138
4.10	Formatting Console Output	140
4.11	Simple File Input and Output	144
Chapter 5	Loops	155
5.1	Introduction	156
5.2	The while Loop	156
5.3	The do-while Loop	168
5.4	The for Loop	171
5.5	Which Loop to Use?	174
5.6	Nested Loops	176
5.7	Minimizing Numeric Errors	178
5.8	Case Studies	179
5.9	Keywords break and continue	185
5.10	Case Study: Checking Palindromes	188
5.11	Case Study: Displaying Prime Numbers	190
Chapter 6	Functions	207
6.1	Introduction	208
6.2	Defining a Function	209
6.3	Calling a Function	210
6.4	void Functions	212
6.5	Passing Arguments by Value	215
6.6	Modularizing Code	216
6.7	Overloading Functions	218
6.8	Function Prototypes	221
6.9	Default Arguments	223
6.10	Inline Functions	224
6.11	Local, Global, and Static Local Variables	225
6.12	Passing Arguments by Reference	230
6.13	Constant Reference Parameters	239
6.14	Case Study: Converting Hexadecimals to Decimals	239
6.15	Function Abstraction and Stepwise Refinement	242
Chapter 7	Single-Dimensional Arrays and C-Strings	265
7.1	Introduction	266
7.2	Array Basics	267
7.3	Problem: Lotto Numbers	273

7.4	Problem: Deck of Cards	276
7.5	Passing Arrays to Functions	278
7.6	Preventing Changes of Array Arguments in Functions	280
7.7	Returning Arrays from Functions	281
7.8	Problem: Counting the Occurrences of Each Letter	284
7.9	Searching Arrays	286
7.10	Sorting Arrays	290
7.11	C-Strings	292
Chapter 8	Multidimensional Arrays	309
8.1	Introduction	310
8.2	Declaring Two-Dimensional Arrays	310
8.3	Processing Two-Dimensional Arrays	311
8.4	Passing Two-Dimensional Arrays to Functions	314
8.5	Problem: Grading a Multiple-Choice Test	315
8.6	Problem: Finding a Closest Pair	317
8.7	Problem: Sudoku	319
8.8	Multidimensional Arrays	322
Chapter 9	Objects and Classes	341
9.1	Introduction	342
9.2	Defining Classes for Objects	342
9.3	Example: Defining Classes and Creating Objects	344
9.4	Constructors	347
9.5	Constructing and Using Objects	348
9.6	Separating Class Definition from Implementation	351
9.7	Preventing Multiple Inclusions	354
9.8	Inline Functions in Classes	355
9.9	Data Field Encapsulation	356
9.10	The Scope of Variables	359
9.11	Class Abstraction and Encapsulation	361
Chapter 10	Object-Oriented Thinking	371
10.1	Introduction	372
10.2	The string Class	372
10.3	Passing Objects to Functions	381
10.4	Array of Objects	384
10.5	Instance and Static Members	386
10.6	Constant Member Functions	390
10.7	Thinking in Objects	392
10.8	Object Composition	398
10.9	Case Study: The StackOfIntegers Class	400
10.10	Class Design Guidelines	402
Chapter 11	Pointers and Dynamic Memory Management	411
11.1	Introduction	412
11.2	Pointer Basics	412
11.3	Defining Synonymous Types Using the typedef Keyword	417
11.4	Using const with Pointers	418
11.5	Arrays and Pointers	419
11.6	Passing Pointer Arguments in a Function Call	422

11.7	Returning a Pointer from Functions	426
11.8	Useful Array Functions	427
11.9	Dynamic Persistent Memory Allocation	429
11.10	Creating and Accessing Dynamic Objects	433
11.11	The <code>this</code> Pointer	435
11.12	Destructors	436
11.13	Case Study: The Course Class	439
11.14	Copy Constructors	442
11.15	Customizing Copy Constructors	445
Chapter 12	Templates, Vectors, and Stacks	455
12.1	Introduction	456
12.2	Templates Basics	456
12.3	Example: A Generic Sort	460
12.4	Class Templates	462
12.5	Improving the Stack Class	469
12.6	The C++ vector Class	471
12.7	Replacing Arrays Using the vector Class	474
12.8	Case Study: Evaluating Expressions	477
Chapter 13	File Input and Output	491
13.1	Introduction	492
13.2	Text I/O	492
13.3	Formatting Output	498
13.4	Functions: <code>getline</code> , <code>get</code> , and <code>put</code>	499
13.5	<code>fstream</code> and File Open Modes	502
13.6	Testing Stream States	504
13.7	Binary I/O	506
13.8	Random Access File	513
13.9	Updating Files	516
Chapter 14	Operator Overloading	523
14.1	Introduction	524
14.2	The Rational Class	524
14.3	Operator Functions	530
14.4	Overloading the Subscript Operator <code>[]</code>	532
14.5	Overloading Augmented Assignment Operators	534
14.6	Overloading the Unary Operators	535
14.7	Overloading the <code>++</code> and <code>--</code> Operators	535
14.8	friend Functions and friend Classes	537
14.9	Overloading the <code><<</code> and <code>>></code> Operators	539
14.10	Automatic Type Conversions	541
14.11	Defining Nonmember Functions for Overloading Operators	542
14.12	The Rational Class with Overloaded Function Operators	543
14.13	Overloading the <code>=</code> Operators	551
Chapter 15	Inheritance and Polymorphism	559
15.1	Introduction	560
15.2	Base Classes and Derived Classes	560
15.3	Generic Programming	568
15.4	Constructors and Destructors	569
15.5	Redefining Functions	574
15.6	Polymorphism	575

15.7	Virtual Functions and Dynamic Binding	576
15.8	The protected Keyword	580
15.9	Abstract Classes and Pure Virtual Functions	581
15.10	Casting: static_cast versus dynamic_cast	589
Chapter 16 Exception Handling		597
16.1	Introduction	598
16.2	Exception-Handling Overview	598
16.3	Exception-Handling Advantages	601
16.4	Exception Classes	603
16.5	Custom Exception Classes	607
16.6	Multiple Catches	612
16.7	Exception Propagation	617
16.8	Rethrowing Exceptions	618
16.9	Exception Specification	620
16.10	When to Use Exceptions	621
Chapter 17 Recursion		625
17.1	Introduction	626
17.2	Example: Factorials	626
17.3	Case Study: Fibonacci Numbers	630
17.4	Problem Solving Using Recursion	633
17.5	Recursive Helper Functions	635
17.6	Towers of Hanoi	638
17.7	Eight Queens	642
17.8	Recursion versus Iteration	645
17.9	Tail Recursion	645

The following bonus chapters are on the book's Companion Website at www.pearsonhighered.com/liang.

Chapter 18	Developing Efficient Algorithms	18-1
Chapter 19	Sorting	19-1
Chapter 20	Linked Lists, Queues, and Priority Queues	20-1
Chapter 21	Binary Search Trees	21-1
Chapter 22	STL Containers	22-1
Chapter 23	STL Algorithms	23-1
Chapter 24	Graphs and Applications	24-1
Chapter 25	Weighted Graphs and Applications	25-1
Chapter 26	AVL Trees and Splay Trees	26-1
