To

My Family

For their abundant support, for their patience and
understanding, and for their love

To

Arthur C. Guyton

For his imaginative and innovative research
For his dedication to education
For showing us the excitement and joy of physiology
And for serving as an inspirational role model

Preface

The first edition of the *Textbook of Medical Physiology* was written by Arthur C. Guyton almost 55 years ago. Unlike most major medical textbooks, which often have 20 or more authors, the first eight editions of the *Textbook of Medical Physiology* were written entirely by Dr. Guyton, with each new edition arriving on schedule for nearly 40 years. The *Textbook of Medical Physiology*, first published in 1956, quickly became the best-selling medical physiology textbook in the world. Dr. Guyton had a gift for communicating complex ideas in a clear and interesting manner that made studying physiology fun. He wrote the book to help students learn physiology, not to impress his professional colleagues.

I worked closely with Dr. Guyton for almost 30 years and had the privilege of writing parts of the 9th and 10th editions. After Dr. Guyton's tragic death in an automobile accident in 2003, I assumed responsibility for completing the 11th edition.

For the 12th edition of the *Textbook of Medical Physiology*, I have the same goal as for previous editions—to explain, in language easily understood by students, how the different cells, tissues, and organs of the human body work together to maintain life.

This task has been challenging and fun because our rapidly increasing knowledge of physiology continues to unravel new mysteries of body functions. Advances in molecular and cellular physiology have made it possible to explain many physiology principles in the terminology of molecular and physical sciences rather than in merely a series of separate and unexplained biological phenomena.

The *Textbook of Medical Physiology*, however, is not a reference book that attempts to provide a compendium of the most recent advances in physiology. This is a book that continues the tradition of being written for students. It focuses on the basic principles of physiology needed to begin a career in the health care professions, such as medicine, dentistry and nursing, as well as graduate studies in the biological and health sciences. It should also be useful to physicians and health care professionals who wish to review the basic principles needed for understanding the pathophysiology of human disease.

I have attempted to maintain the same unified organization of the text that has been useful to students in the past and to ensure that the book is comprehensive enough that students will continue to use it during their professional careers.

My hope is that this textbook conveys the majesty of the human body and its many functions and that it stimulates students to study physiology throughout their careers. Physiology is the link between the basic sciences and medicine. The great beauty of physiology is that it integrates the individual functions of all the body's different cells, tissues, and organs into a functional whole, the human body. Indeed, the human body is much more than the sum of its parts, and life relies upon this total function, not just on the function of individual body parts in isolation from the others.

This brings us to an important question: How are the separate organs and systems coordinated to maintain proper function of the entire body? Fortunately, our bodies are endowed with a vast network of feedback controls that achieve the necessary balances without which we would be unable to live. Physiologists call this high level of internal bodily control *homeostasis*. In disease states, functional balances are often seriously disturbed and homeostasis is impaired. When even a single disturbance reaches a limit, the whole body can no longer live. One of the goals of this text, therefore, is to emphasize the effectiveness and beauty of the body's homeostasis mechanisms as well as to present their abnormal functions in disease.

Another objective is to be as accurate as possible. Suggestions and critiques from many students, physiologists, and clinicians throughout the world have been sought and then used to check factual accuracy as well as balance in the text. Even so, because of the likelihood of error in sorting through many thousands of bits of information, I wish to issue a further request to all readers to send along notations of error or inaccuracy. Physiologists understand the importance of feedback for proper function of the human body; so, too, is feedback important for progressive improvement of a textbook of physiology. To the many persons who have already helped, I express sincere thanks.

A brief explanation is needed about several features of the 12th edition. Although many of the chapters have been revised to include new principles of physiology, the text length has been closely monitored to limit the book size so that it can be used effectively in physiology courses for medical students and health care professionals. Many of the figures have also been redrawn and are in full color. New references have been chosen primarily for their presentation of physiologic principles, for the quality of their own references, and for their easy accessibility. The selected bibliography at the end of the chapters lists papers mainly from recently published scientific journals that can be freely accessed from the PubMed internet site at <http://www.ncbi.nlm.nih.gov/sites/entrez/>. Use of these references, as well as cross-references from them, can give the student almost complete coverage of the entire field of physiology. The effort to be as concise as possible has, unfortunately, necessitated a more simplified and dogmatic presentation of many physiologic principles than I normally would have desired. However, the bibliography can be used to learn more about the controversies and unanswered questions that remain in understanding the complex functions of the human body in health and disease.

Another feature is that the print is set in two sizes. The material in large print constitutes the fundamental physiologic information that students will require in virtually all of their medical activities and studies.

The material in small print is of several different kinds: first, anatomic, chemical, and other information that is

needed for immediate discussion but that most students will learn in more detail in other courses; second, physiologic information of special importance to certain fields of clinical medicine; and, third, information that will be of value to those students who may wish to study particular physiologic mechanisms more deeply.

I wish to express sincere thanks to many persons who have helped to prepare this book, including my colleagues in the Department of Physiology and Biophysics at the University of Mississippi Medical Center who provided valuable suggestions. The members of our faculty and a brief description of the research and educational activities of the department can be found at the web site: <http://physiology.umc.edu/>. I am also grateful to Stephanie Lucas and Courtney Horton Graham for their excellent secretarial services, to Michael Schenk and Walter (Kyle) Cunningham for their expert artwork, and to William Schmitt, Rebecca Gruliow, Frank Morales, and the entire Elsevier Saunders team for continued editorial and production excellence.

Finally, I owe an enormous debt to Arthur Guyton for the great privilege of contributing to the *Textbook of Medical Physiology*, for an exciting career in physiology, for his friendship, and for the inspiration that he provided to all who knew him.

John E. Hall

Contents

UNIT I

Introduction to Physiology: The Cell and General Physiology

CHAPTER 1

Functional Organization of the Human Body and Control of the "Internal Environment" 3

Cells as the Living Units of the Body 3

Extracellular Fluid—The "Internal Environment" 3

"Homeostatic" Mechanisms of the Major Functional Systems 4

Control Systems of the Body 6

Summary—Automaticity of the Body 9

CHAPTER 2

The Cell and Its Functions 11

Organization of the Cell 11

Physical Structure of the Cell 12

Comparison of the Animal Cell with Precellular Forms of Life 17

Functional Systems of the Cell 18

Locomotion of Cells 23

CHAPTER 3

Genetic Control of Protein Synthesis, Cell Function, and Cell Reproduction 27

Genes in the Cell Nucleus 27

The DNA Code in the Cell Nucleus Is Transferred to an RNA Code in the Cell Cytoplasm—The Process of Transcription 30

Synthesis of Other Substances in the Cell 35

Control of Gene Function and Biochemical Activity in Cells 35

The DNA-Genetic System Also Controls Cell Reproduction 37

Cell Differentiation 39

Apoptosis—Programmed Cell Death 40

Cancer 40

UNIT II

Membrane Physiology, Nerve, and Muscle

CHAPTER 4

Transport of Substances Through Cell Membranes 45

The Lipid Barrier of the Cell Membrane, and Cell Membrane Transport Proteins 45

Diffusion 46

"Active Transport" of Substances Through Membranes 52

CHAPTER 5

Membrane Potentials and Action Potentials 57

Basic Physics of Membrane Potentials 57

Measuring the Membrane Potential 58

Resting Membrane Potential of Nerves 59

Nerve Action Potential 60

Roles of Other Ions During the Action Potential 64

Propagation of the Action Potential 64

Re-establishing Sodium and Potassium Ionic Gradients After Action Potentials Are Completed—Importance of Energy Metabolism 65

Plateau in Some Action Potentials 66

Rhythmicity of Some Excitable Tissues—Repetitive Discharge 66

Special Characteristics of Signal Transmission in Nerve Trunks 67

Excitation—The Process of Eliciting the Action Potential 68

Recording Membrane Potentials and Action Potentials 69

CHAPTER 6

Contraction of Skeletal Muscle	71
Physiologic Anatomy of Skeletal Muscle	71
General Mechanism of Muscle Contraction	73
Molecular Mechanism of Muscle Contraction	74
Energetics of Muscle Contraction	78
Characteristics of Whole Muscle Contraction	79

CHAPTER 7

Excitation of Skeletal Muscle: Neuromuscular Transmission and Excitation-Contraction Coupling	83
Transmission of Impulses from Nerve Endings to Skeletal Muscle Fibers: The Neuromuscular Junction	83
Molecular Biology of Acetylcholine Formation and Release	86
Drugs That Enhance or Block Transmission at the Neuromuscular Junction	86
Myasthenia Gravis Causes Muscle Paralysis	86
Muscle Action Potential	87
Excitation-Contraction Coupling	88

CHAPTER 8

Excitation and Contraction of Smooth Muscle	91
Contraction of Smooth Muscle	91
Nervous and Hormonal Control of Smooth Muscle Contraction	94

UNIT III**The Heart****CHAPTER 9**

Cardiac Muscle; The Heart as a Pump and Function of the Heart Valves	101
Physiology of Cardiac Muscle	101
Cardiac Cycle	104
Relationship of the Heart Sounds to Heart Pumping	107
Work Output of the Heart	107
Chemical Energy Required for Cardiac Contraction: Oxygen Utilization by the Heart	109
Regulation of Heart Pumping	110

CHAPTER 10

Rhythmical Excitation of the Heart	115
Specialized Excitatory and Conductive System of the Heart	115
Control of Excitation and Conduction in the Heart	118

CHAPTER 11

The Normal Electrocardiogram	121
Characteristics of the Normal Electrocardiogram	121
Methods for Recording Electrocardiograms	123
Flow of Current Around the Heart during the Cardiac Cycle	123
Electrocardiographic Leads	124

CHAPTER 12

Electrocardiographic Interpretation of Cardiac Muscle and Coronary Blood Flow Abnormalities: Vectorial Analysis	129
Principles of Vectorial Analysis of Electrocardiograms	129
Vectorial Analysis of the Normal Electrocardiogram	131
Mean Electrical Axis of the Ventricular QRS—and Its Significance	134
Conditions That Cause Abnormal Voltages of the QRS Complex	137
Prolonged and Bizarre Patterns of the QRS Complex	137
Current of Injury	138
Abnormalities in the T Wave	141

CHAPTER 13

Cardiac Arrhythmias and Their Electrocardiographic Interpretation	143
Abnormal Sinus Rhythms	143
Abnormal Rhythms That Result from Block of Heart Signals Within the Intracardiac Conduction Pathways	144
Premature Contractions	146
Paroxysmal Tachycardia	148
Ventricular Fibrillation	149
Atrial Fibrillation	151
Atrial Flutter	152
Cardiac Arrest	153

UNIT IV**The Circulation****CHAPTER 14**

Overview of the Circulation; Biophysics of Pressure, Flow, and Resistance	157
Physical Characteristics of the Circulation	157
Basic Principles of Circulatory Function	158
Interrelationships of Pressure, Flow, and Resistance	159

CHAPTER 15		CHAPTER 20	
Vascular Distensibility and Functions of the Arterial and Venous Systems	167	Cardiac Output, Venous Return, and Their Regulation	229
Vascular Distensibility	167	Normal Values for Cardiac Output at Rest and During Activity	229
Arterial Pressure Pulsations	168	Control of Cardiac Output by Venous Return—Role of the Frank-Starling Mechanism of the Heart	229
Veins and Their Functions	171	Pathologically High or Low Cardiac Outputs	232
CHAPTER 16		Methods for Measuring Cardiac Output	240
The Microcirculation and Lymphatic System: Capillary Fluid Exchange, Interstitial Fluid, and Lymph Flow	177	CHAPTER 21	
Structure of the Microcirculation and Capillary System	177	Muscle Blood Flow and Cardiac Output During Exercise; the Coronary Circulation and Ischemic Heart Disease	243
Flow of Blood in the Capillaries—Vasomotion	178	Blood Flow Regulation in Skeletal Muscle at Rest and During Exercise	243
Exchange of Water, Nutrients, and Other Substances Between the Blood and Interstitial Fluid	179	Coronary Circulation	246
Interstitium and Interstitial Fluid	180	CHAPTER 22	
Fluid Filtration Across Capillaries Is Determined by Hydrostatic and Colloid Osmotic Pressures, as Well as Capillary Filtration Coefficient	181	Cardiac Failure	255
Lymphatic System	186	Circulatory Dynamics in Cardiac Failure	255
CHAPTER 17		Unilateral Left Heart Failure	259
Local and Humoral Control of Tissue Blood Flow	191	Low-Output Cardiac Failure—Cardiogenic Shock	259
Local Control of Blood Flow in Response to Tissue Needs	191	Edema in Patients with Cardiac Failure	259
Mechanisms of Blood Flow Control	191	Cardiac Reserve	261
Humoral Control of the Circulation	199	CHAPTER 23	
CHAPTER 18		Heart Valves and Heart Sounds; Valvular and Congenital Heart Defects	265
Nervous Regulation of the Circulation, and Rapid Control of Arterial Pressure	201	Heart Sounds	265
Nervous Regulation of the Circulation	201	Abnormal Circulatory Dynamics in Valvular Heart Disease	268
Role of the Nervous System in Rapid Control of Arterial Pressure	204	Abnormal Circulatory Dynamics in Congenital Heart Defects	269
Special Features of Nervous Control of Arterial Pressure	209	Use of Extracorporeal Circulation During Cardiac Surgery	271
CHAPTER 19		Hypertrophy of the Heart in Valvular and Congenital Heart Disease	272
Role of the Kidneys in Long-Term Control of Arterial Pressure and in Hypertension: The Integrated System for Arterial Pressure Regulation	213	CHAPTER 24	
Renal–Body Fluid System for Arterial Pressure Control	213	Circulatory Shock and Its Treatment	273
The Renin-Angiotensin System: Its Role in Arterial Pressure Control	220	Physiologic Causes of Shock	273
Summary of the Integrated, Multifaceted System for Arterial Pressure Regulation	226	Shock Caused by Hypovolemia—Hemorrhagic Shock	274
		Neurogenic Shock—Increased Vascular Capacity	279
		Anaphylactic Shock and Histamine Shock	280
		Septic Shock	280

Physiology of Treatment in Shock	280
Circulatory Arrest	281

UNIT V

The Body Fluids and Kidneys

CHAPTER 25

The Body Fluid Compartments: Extracellular and Intracellular Fluids; Edema	285
Fluid Intake and Output Are Balanced During Steady-State Conditions	285
Body Fluid Compartments	286
Extracellular Fluid Compartment	287
Blood Volume	287
Constituents of Extracellular and Intracellular Fluids	287
Measurement of Fluid Volumes in the Different Body Fluid Compartments—the Indicator-Dilution Principle	287
Determination of Volumes of Specific Body Fluid Compartments	289
Regulation of Fluid Exchange and Osmotic Equilibrium Between Intracellular and Extracellular Fluid	290
Basic Principles of Osmosis and Osmotic Pressure	290
Osmotic Equilibrium Is Maintained Between Intracellular and Extracellular Fluids	291
Volume and Osmolality of Extracellular and Intracellular Fluids in Abnormal States	292
Glucose and Other Solutions Administered for Nutritive Purposes	294
Clinical Abnormalities of Fluid Volume Regulation: Hyponatremia and Hypernatremia	294
Edema: Excess Fluid in the Tissues	296
Fluids in the “Potential Spaces” of the Body	300

CHAPTER 26

Urine Formation by the Kidneys: I. Glomerular Filtration, Renal Blood Flow, and Their Control	303
Multiple Functions of the Kidneys	303
Physiologic Anatomy of the Kidneys	304
Micturition	307
Physiologic Anatomy of the Bladder	307
Transport of Urine from the Kidney Through the Ureters and into the Bladder	308
Filling of the Bladder and Bladder Wall Tone; the Cystometrogram	309
Micturition Reflex	309

Abnormalities of Micturition	310
Urine Formation Results from Glomerular Filtration, Tubular Reabsorption, and Tubular Secretion	310
Glomerular Filtration—The First Step in Urine Formation	312
Determinants of the GFR	314
Renal Blood Flow	316
Physiologic Control of Glomerular Filtration and Renal Blood Flow	317
Autoregulation of GFR and Renal Blood Flow	319

CHAPTER 27

Urine Formation by the Kidneys: II. Tubular Reabsorption and Secretion	323
Renal Tubular Reabsorption and Secretion	323
Tubular Reabsorption Includes Passive and Active Mechanisms	323
Reabsorption and Secretion Along Different Parts of the Nephron	329
Regulation of Tubular Reabsorption	334
Use of Clearance Methods to Quantify Kidney Function	340

CHAPTER 28

Urine Concentration and Dilution; Regulation of Extracellular Fluid Osmolarity and Sodium Concentration	345
Kidneys Excrete Excess Water by Forming Dilute Urine	345
Kidneys Conserve Water by Excreting Concentrated Urine	346
Quantifying Renal Urine Concentration and Dilution: “Free Water” and Osmolar Clearances	354
Disorders of Urinary Concentrating Ability	354
Control of Extracellular Fluid Osmolarity and Sodium Concentration	355
Osmoreceptor-ADH Feedback System	355
Importance of Thirst in Controlling Extracellular Fluid Osmolarity and Sodium Concentration	357
Salt-Appetite Mechanism for Controlling Extracellular Fluid Sodium Concentration and Volume	360

CHAPTER 29

Renal Regulation of Potassium, Calcium, Phosphate, and Magnesium; Integration of Renal Mechanisms for Control of Blood Volume and Extracellular Fluid Volume	361
Regulation of Extracellular Fluid Potassium Concentration and Potassium Excretion	361

CHAPTER 36		
Hemostasis and Blood Coagulation	451	
Events in Hemostasis	451	
Vascular Constriction	451	
Mechanism of Blood Coagulation	453	
Conditions That Cause Excessive Bleeding in Humans	457	
Thromboembolic Conditions in the Human Being	459	
Anticoagulants for Clinical Use	459	
Blood Coagulation Tests	460	
UNIT VII		
Respiration		
CHAPTER 37		
Pulmonary Ventilation	465	
Mechanics of Pulmonary Ventilation	465	
Pulmonary Volumes and Capacities	469	
Minute Respiratory Volume Equals Respiratory Rate Times Tidal Volume	471	
Alveolar Ventilation	471	
Functions of the Respiratory Passageways	472	
CHAPTER 38		
Pulmonary Circulation, Pulmonary Edema, Pleural Fluid	477	
Physiologic Anatomy of the Pulmonary Circulatory System	477	
Pressures in the Pulmonary System	477	
Blood Volume of the Lungs	478	
Blood Flow Through the Lungs and Its Distribution	479	
Effect of Hydrostatic Pressure Gradients in the Lungs on Regional Pulmonary Blood Flow	479	
Pulmonary Capillary Dynamics	481	
Fluid in the Pleural Cavity	483	
CHAPTER 39		
Physical Principles of Gas Exchange; Diffusion of Oxygen and Carbon Dioxide Through the Respiratory Membrane	485	
Physics of Gas Diffusion and Gas Partial Pressures	485	
Compositions of Alveolar Air and Atmospheric Air Are Different	487	
Diffusion of Gases Through the Respiratory Membrane	489	
Effect of the Ventilation-Perfusion Ratio on Alveolar Gas Concentration	492	
CHAPTER 40		
Transport of Oxygen and Carbon Dioxide in Blood and Tissue Fluids	495	
Transport of Oxygen from the Lungs to the Body Tissues	495	
Transport of Carbon Dioxide in the Blood	502	
Respiratory Exchange Ratio	504	
CHAPTER 41		
Regulation of Respiration	505	
Respiratory Center	505	
Chemical Control of Respiration	507	
Peripheral Chemoreceptor System for Control of Respiratory Activity—Role of Oxygen in Respiratory Control	508	
Regulation of Respiration During Exercise	510	
Other Factors That Affect Respiration	512	
CHAPTER 42		
Respiratory Insufficiency—Pathophysiology, Diagnosis, Oxygen Therapy	515	
Useful Methods for Studying Respiratory Abnormalities	515	
Pathophysiology of Specific Pulmonary Abnormalities	517	
Hypoxia and Oxygen Therapy	520	
Hypercapnia—Excess Carbon Dioxide in the Body Fluids	522	
Artificial Respiration	522	
UNIT VIII		
Aviation, Space, and Deep-Sea Diving Physiology		
CHAPTER 43		
Aviation, High-Altitude, and Space Physiology	527	
Effects of Low Oxygen Pressure on the Body	527	
Effects of Acceleratory Forces on the Body in Aviation and Space Physiology	531	
"Artificial Climate" in the Sealed Spacecraft	533	
Weightlessness in Space	533	
CHAPTER 44		
Physiology of Deep-Sea Diving and Other Hyperbaric Conditions	535	
Effect of High Partial Pressures of Individual Gases on the Body	535	
Scuba (Self-Contained Underwater Breathing Apparatus) Diving	539	
Special Physiologic Problems in Submarines	540	
Hyperbaric Oxygen Therapy	540	

UNIT IX**The Nervous System: A. General Principles and Sensory Physiology****CHAPTER 45**

Organization of the Nervous System, Basic Functions of Synapses, and Neurotransmitters	543
General Design of the Nervous System	543
Major Levels of Central Nervous System Function	545
Comparison of the Nervous System with a Computer	546
Central Nervous System Synapses	546
Some Special Characteristics of Synaptic Transmission	557

CHAPTER 46

Sensory Receptors, Neuronal Circuits for Processing Information	559
Types of Sensory Receptors and the Stimuli They Detect	559
Transduction of Sensory Stimuli into Nerve Impulses	560
Nerve Fibers That Transmit Different Types of Signals and Their Physiologic Classification	563
Transmission of Signals of Different Intensity in Nerve Tracts—Spatial and Temporal Summation	564
Transmission and Processing of Signals in Neuronal Pools	564
Instability and Stability of Neuronal Circuits	569

CHAPTER 47

Somatic Sensations: I. General Organization, the Tactile and Position Senses	571
Classification of Somatic Senses	571
Detection and Transmission of Tactile Sensations	571
Sensory Pathways for Transmitting Somatic Signals into the Central Nervous System	573
Transmission in the Dorsal Column—Medial Lemniscal System	573
Transmission of Less Critical Sensory Signals in the Anterolateral Pathway	580
Some Special Aspects of Somatosensory Function	581

CHAPTER 48

Somatic Sensations: II. Pain, Headache, and Thermal Sensations	583
Types of Pain and Their Qualities—Fast Pain and Slow Pain	583

Pain Receptors and Their Stimulation	583
Dual Pathways for Transmission of Pain Signals into the Central Nervous System	584
Pain Suppression ("Analgesia") System in the Brain and Spinal Cord	586
Referred Pain	588
Visceral Pain	588
Some Clinical Abnormalities of Pain and Other Somatic Sensations	590
Headache	590
Thermal Sensations	592

UNIT X**The Nervous System: B. The Special Senses****CHAPTER 49**

The Eye: I. Optics of Vision	597
Physical Principles of Optics	597
Optics of the Eye	600
Ophthalmoscope	605
Fluid System of the Eye—Intraocular Fluid	606

CHAPTER 50

The Eye: II. Receptor and Neural Function of the Retina	609
Anatomy and Function of the Structural Elements of the Retina	609
Photochemistry of Vision	611
Color Vision	615
Neural Function of the Retina	616

CHAPTER 51

The Eye: III. Central Neurophysiology of Vision	623
Visual Pathways	623
Organization and Function of the Visual Cortex	624
Neuronal Patterns of Stimulation During Analysis of the Visual Image	626
Fields of Vision; Perimetry	627
Eye Movements and Their Control	627
Autonomic Control of Accommodation and Pupillary Aperture	631

CHAPTER 52

The Sense of Hearing	633
Tympanic Membrane and the Ossicular System	633
Cochlea	634
Central Auditory Mechanisms	639
Hearing Abnormalities	642

CHAPTER 53

The Chemical Senses—Taste and Smell	645
Sense of Taste	645
Sense of Smell	648

UNIT XI
The Nervous System: C. Motor and Integrative Neurophysiology
CHAPTER 54

Motor Functions of the Spinal Cord; the Cord Reflexes	655
Organization of the Spinal Cord for Motor Functions	655
Muscle Sensory Receptors—Muscle Spindles and Golgi Tendon Organs—And Their Roles in Muscle Control	657
Flexor Reflex and the Withdrawal Reflexes	661
Crossed Extensor Reflex	663
Reciprocal Inhibition and Reciprocal Innervation	663
Reflexes of Posture and Locomotion	663
Scratch Reflex	664
Spinal Cord Reflexes That Cause Muscle Spasm	664
Autonomic Reflexes in the Spinal Cord	665
Spinal Cord Transection and Spinal Shock	665

CHAPTER 55

Cortical and Brain Stem Control of Motor Function	667
Motor Cortex and Corticospinal Tract	667
Role of the Brain Stem in Controlling Motor Function	673
Vestibular Sensations and Maintenance of Equilibrium	674
Functions of Brain Stem Nuclei in Controlling Subconscious, Stereotyped Movements	678

CHAPTER 56

Contributions of the Cerebellum and Basal Ganglia to Overall Motor Control	681
Cerebellum and Its Motor Functions	681
Basal Ganglia—Their Motor Functions	689
Integration of the Many Parts of the Total Motor Control System	694

CHAPTER 57

Cerebral Cortex, Intellectual Functions of the Brain, Learning, and Memory	697
Physiologic Anatomy of the Cerebral Cortex	697
Functions of Specific Cortical Areas	698

Function of the Brain in Communication—Language Input and Language Output	703
Function of the Corpus Callosum and Anterior Commissure to Transfer Thoughts, Memories, Training, and Other Information Between the Two Cerebral Hemispheres	704
Thoughts, Consciousness, and Memory	705

CHAPTER 58

Behavioral and Motivational Mechanisms of the Brain—The Limbic System and the Hypothalamus	711
Activating-Driving Systems of the Brain	711
Limbic System	714
Functional Anatomy of the Limbic System; Key Position of the Hypothalamus	714
Hypothalamus, a Major Control Headquarters for the Limbic System	715
Specific Functions of Other Parts of the Limbic System	718

CHAPTER 59

States of Brain Activity—Sleep, Brain Waves, Epilepsy, Psychoses	721
Sleep	721
Epilepsy	725
Psychotic Behavior and Dementia—Roles of Specific Neurotransmitter Systems	726
Schizophrenia—Possible Exaggerated Function of Part of the Dopamine System	727

CHAPTER 60

The Autonomic Nervous System and the Adrenal Medulla	729
General Organization of the Autonomic Nervous System	729
Basic Characteristics of Sympathetic and Parasympathetic Function	731
Autonomic Reflexes	738
Stimulation of Discrete Organs in Some Instances and Mass Stimulation in Other Instances by the Sympathetic and Parasympathetic Systems	738
Pharmacology of the Autonomic Nervous System	739

CHAPTER 61

Cerebral Blood Flow, Cerebrospinal Fluid, and Brain Metabolism	743
Cerebral Blood Flow	743
Cerebrospinal Fluid System	746
Brain Metabolism	749

UNIT XII**Gastrointestinal Physiology****CHAPTER 62****General Principles of Gastrointestinal Function—Motility, Nervous Control, and Blood Circulation 753**

General Principles of Gastrointestinal Motility 753

Neural Control of Gastrointestinal Function—Enteric Nervous System 755

Functional Types of Movements in the Gastrointestinal Tract 759

Gastrointestinal Blood Flow—"Splanchnic Circulation" 759

CHAPTER 63**Propulsion and Mixing of Food in the Alimentary Tract 763**

Ingestion of Food 763

Motor Functions of the Stomach 765

Movements of the Small Intestine 768

Movements of the Colon 770

Other Autonomic Reflexes That Affect Bowel Activity 772

CHAPTER 64**Secretory Functions of the Alimentary Tract 773**

General Principles of Alimentary Tract Secretion 773

Secretion of Saliva 775

Esophageal Secretion 776

Gastric Secretion 777

Pancreatic Secretion 780

Secretion of Bile by the Liver; Functions of the Biliary Tree 783

Secretions of the Small Intestine 786

Secretion of Mucus by the Large Intestine 787

CHAPTER 65**Digestion and Absorption in the Gastrointestinal Tract 789**

Digestion of the Various Foods by Hydrolysis 789

Basic Principles of Gastrointestinal Absorption 793

Absorption in the Small Intestine 794

Absorption in the Large Intestine: Formation of Feces 797

CHAPTER 66**Physiology of Gastrointestinal Disorders 799**

Disorders of Swallowing and of the Esophagus 799

Disorders of the Stomach 799

Disorders of the Small Intestine 801

Disorders of the Large Intestine 802

General Disorders of the Gastrointestinal Tract 803

UNIT XIII**Metabolism and Temperature Regulation****CHAPTER 67****Metabolism of Carbohydrates, and Formation of Adenosine Triphosphate 809**

Central Role of Glucose in Carbohydrate Metabolism 810

Transport of Glucose Through the Cell Membrane 810

Glycogen Is Stored in Liver and Muscle 811

Release of Energy from Glucose by the Glycolytic Pathway 812

Release of Energy from Glucose by the Pentose Phosphate Pathway 816

Formation of Carbohydrates from Proteins and Fats—"Gluconeogenesis" 817

Blood Glucose 817

CHAPTER 68**Lipid Metabolism 819**

Transport of Lipids in the Body Fluids 819

Fat Deposits 821

Use of Triglycerides for Energy: Formation of Adenosine Triphosphate 822

Regulation of Energy Release from Triglycerides 825

Phospholipids and Cholesterol 826

Atherosclerosis 827

CHAPTER 69**Protein Metabolism 831**

Basic Properties 831

Transport and Storage of Amino Acids 831

Functional Roles of the Plasma Proteins 833

Hormonal Regulation of Protein Metabolism 835

CHAPTER 70**The Liver as an Organ 837**

Physiologic Anatomy of the Liver 837

Hepatic Vascular and Lymph Systems 837

Metabolic Functions of the Liver 839

Measurement of Bilirubin in the Bile as a Clinical Diagnostic Tool 840

CHAPTER 71

Dietary Balances; Regulation of Feeding; Obesity and Starvation; Vitamins and Minerals	843
Energy Intake and Output Are Balanced Under Steady-State Conditions	843
Dietary Balances	843
Regulation of Food Intake and Energy Storage	845
Obesity	850
Inanition, Anorexia, and Cachexia	851
Starvation	852
Vitamins	852
Mineral Metabolism	855

CHAPTER 72

Energetics and Metabolic Rate	859
Adenosine Triphosphate (ATP) Functions as an "Energy Currency" in Metabolism	859
Control of Energy Release in the Cell	861
Metabolic Rate	862
Energy Metabolism—Factors That Influence Energy Output	863

CHAPTER 73

Body Temperature Regulation, and Fever	867
Normal Body Temperatures	867
Body Temperature Is Controlled by Balancing Heat Production and Heat Loss	867
Regulation of Body Temperature—Role of the Hypothalamus	871
Abnormalities of Body Temperature Regulation	875

UNIT XIV

Endocrinology and Reproduction

CHAPTER 74

Introduction to Endocrinology	881
Coordination of Body Functions by Chemical Messengers	881
Chemical Structure and Synthesis of Hormones	881
Hormone Secretion, Transport, and Clearance from the Blood	884
Mechanisms of Action of Hormones	886
Measurement of Hormone Concentrations in the Blood	891

CHAPTER 75

Pituitary Hormones and Their Control by the Hypothalamus	895
Pituitary Gland and Its Relation to the Hypothalamus	895
Hypothalamus Controls Pituitary Secretion	897
Physiological Functions of Growth Hormone	898
Posterior Pituitary Gland and Its Relation to the Hypothalamus	904

CHAPTER 76

Thyroid Metabolic Hormones	907
Synthesis and Secretion of the Thyroid Metabolic Hormones	907
Physiological Functions of the Thyroid Hormones	910
Regulation of Thyroid Hormone Secretion	914
Diseases of the Thyroid	916

CHAPTER 77

Adrenocortical Hormones	921
Synthesis and Secretion of Adrenocortical Hormones	921
Functions of the Mineralocorticoids—Aldosterone	924
Functions of the Glucocorticoids	928
Adrenal Androgens	934
Abnormalities of Adrenocortical Secretion	934

CHAPTER 78

Insulin, Glucagon, and Diabetes Mellitus	939
Insulin and Its Metabolic Effects	939
Glucagon and Its Functions	947
Somatostatin Inhibits Glucagon and Insulin Secretion	949
Summary of Blood Glucose Regulation	949
Diabetes Mellitus	950

CHAPTER 79

Parathyroid Hormone, Calcitonin, Calcium and Phosphate Metabolism, Vitamin D, Bone, and Teeth	955
Overview of Calcium and Phosphate Regulation in the Extracellular Fluid and Plasma	955
Bone and Its Relation to Extracellular Calcium and Phosphate	957
Vitamin D	960
Parathyroid Hormone	962
Calcitonin	966
Summary of Control of Calcium Ion Concentration	966

Pathophysiology of Parathyroid Hormone, Vitamin D, and Bone Disease	967	Function of the Placenta	1005
Physiology of the Teeth	969	Hormonal Factors in Pregnancy	1007
CHAPTER 80		Response of the Mother's Body to Pregnancy	1009
Reproductive and Hormonal Functions of the Male (and Function of the Pineal Gland)	973	Parturition	1011
Physiologic Anatomy of the Male Sexual Organs	973	Lactation	1014
Spermatogenesis	973	CHAPTER 83	
Male Sexual Act	978	Fetal and Neonatal Physiology	1019
Testosterone and Other Male Sex Hormones	979	Growth and Functional Development of the Fetus	1019
Abnormalities of Male Sexual Function	984	Development of the Organ Systems	1019
Erectile Dysfunction in the Male	985	Adjustments of the Infant to Extrauterine Life	1021
Pineal Gland—Its Function in Controlling Seasonal Fertility in Some Animals	986	Special Functional Problems in the Neonate	1023
		Special Problems of Prematurity	1026
		Growth and Development of the Child	1027
CHAPTER 81			
Female Physiology Before Pregnancy and Female Hormones	987	UNIT XV	
Physiologic Anatomy of the Female Sexual Organs	987	Sports Physiology	
Female Hormonal System	987		
Monthly Ovarian Cycle; Function of the Gonadotropic Hormones	988	CHAPTER 84	
Functions of the Ovarian Hormones—Estradiol and Progesterone	991	Sports Physiology	1031
Regulation of the Female Monthly Rhythm—Interplay Between the Ovarian and Hypothalamic-Pituitary Hormones	996	Muscles in Exercise	1031
Abnormalities of Secretion by the Ovaries	999	Respiration in Exercise	1036
Female Sexual Act	1000	Cardiovascular System in Exercise	1038
Female Fertility	1000	Body Heat in Exercise	1039
		Body Fluids and Salt in Exercise	1040
CHAPTER 82		Drugs and Athletes	1040
Pregnancy and Lactation	1003	Body Fitness Prolongs Life	1041
Maturation and Fertilization of the Ovum	1003		
Early Nutrition of the Embryo	1005	Index	1043

Introduction to Physiology: The Cell and General Physiology

1. Functional Organization of the Human Body and Control of the "Internal Environment"
2. The Cell and Its Functions
3. Genetic Control of Protein Synthesis, Cell Function, and Cell Reproduction
