Rolling Bearing Application

Liu Zejiu He Shiquan Liu Hui

机械工业出版社

This book briefly introduces the types of rolling bearings and their application, identification codes, tolerance and rotating accuracy, general international technical terms, dynamic and static capacity and life calculation, elastic and permanent deformation calculation, support arrangement, fit selection, radial internal clearance selection, rolling bearing vibration and noise, sliding friction in rolling bearings and lubricant, lubrication method selection, bearing mounting and dismounting and so on.

This would be a book reference for all kinds of the technical engineers and academia person who want to know the basic knowledge of rolling bearings and who are going to select a proper rolling bearing or who carry on bearing applied design. Also this book can be a reference book for all the persons who use rolling bearing and for the teachers and students of universities and colleges.

Preface

There have been three major changes or corrections in technical term of China bearing industry since 1970:

1. The change of load capacity and life calculation method of rolling bearings;

Before 1970, China rolling bearing industry used the load capacity and life calculation method of the former Soviet Union. That is the working capacity factor method of rolling bearings, Its basic equation is: $C = (Qnh)^{0.3}$. Where, C —working capacity factor of a rolling bearing; for a specific rolling bearing, it is a constant. Q —actual load on a rolling bearing (kN). n —rolling bearing rotation speed (r/min). h —rolling bearing life (h).

G. Lundberg and A. Palmgren published two famous articles in 1945 and 1952 respectively, and put forward a statistical probability method for rolling bearing capacity and life calculation. Its basic equation is: For ball bearing, $L = (C/P)^3$; For roller bearing, $L = (C/P)^{10/3}$. Where, C —rolling bearing basic dynamic rating; for a specific rolling bearing, it is a constant (kN). P —equivalent dynamic load (kN). L —rolling bearing life (10^6 r).

Since the publishing of the two famous articles, many rolling bearing companies have carried on a lot of studying, testing, and verifying work about this new rolling bearing theory. The International Standard Organization, ISO, published two recommended standards:

ISO/R281—1962 Basic dynamic load rating of rolling bearings;
ISO/R76—1962 static load rating of rolling bearings. Till 1970, most countries adopted the two ISO recommended standards. So China rolling bearing industry decided to adopt these two ISO standards in China, and stopped using the old rolling bearing calculation method. In 1975, the Rolling Bearing Sample Book was published by China Machine Press, in

IV

which for the first time the parameters of C , C_0 and rotation speed limit n for every rolling bearing were given out.

The change of rolling bearing life calculation method would affect many aspects. and all technical data about rolling bearings must be changed accordingly. Therefore, in 1978. we wrote the book *Rolling Bearing Load Rating and Life* and the book was published by China Machine Press, in 1982.

2. The identification code change of rolling bearings

Before 1990, China rolling bearing industry used the former Soviet Union's rolling bearing identification codes (designation) which was expressed by numbers. It was quite different from the common international rolling bearing identification code which was expressed by English letters and numbers. China government carried out the reform in 1978, and China rolling bearing export increased very quickly. But the difference rolling bearing identification codes seriously hurt Chinese rolling bearing export. Therefore, China rolling bearing industry decided to change the old identification code and adopted the commonly used international rolling bearing identification codes in 1990 and stipulated the new China National Standard GB/T272—1993: rolling bearing identification codes, and it took effect from the first of July, 1994. The identification code change of Chinese rolling bearings affected more comprehensive aspects. So, in 1994, we wrote the book *Rolling Bearing Application Handbook*, which was published by China Machine Press in 1996.

3. The technical standard revision of rolling bearings

The International Standard Organization (ISO) decided to restore Chinese membership in 1978. The China rolling bearing industry hold a meeting of ISO/TC4 (The Rolling Bearing Technical Committee, that is the fourth committee of ISO) in Hangzhou of China in April of 1986.

Since then, China rolling bearing technical standards have been revised synchronized with the international rolling bearing standards, Now most of the international rolling bearings standards have been adopted as the China National Standards equally or equivalently. So that, we wrote the book

Rolling Bearing Application Handbook (2ed) and the book was published by China Machine Press, in January of 2006.

Based on latest information and development of rolling bearing, recently we wrote the book *Rolling Bearing Application*. This book briefly introduces the types of rolling bearing and their application, identification codes, tolerance and rotating accuracy, common international technical terms, dynamic and static capacity and life calculation, elastic and permanent deformation calculation, support arrangement, fit selection, radial internal clearance selection, rolling bearing vibration and noise, sliding friction in rolling bearings, lubricant, lubrication method selection, bearing mounting and dismounting and so on.

The Chinese edition of this book was written by Liu Zejiu (Chapter 1, 2, 4, 6), He Shiquan (Chapter 3, 7) and Liu Hui (Chapter 5). The English edition of this book was translated by the above authors.

It is hard job to produce this book in English version. We are very thankful to China Machine Press. We also did appreciate any valuable comments from all of readers.

Liu Zejiu

List of Symbols

A	minimum load Constant; Constant
a	Semi-major axis of projected contact ellipse
a_1	Life adjustment factor for reliability
B	Bearing width
b	Semi-minor axis of projected contact ellipse
C	Dynamic load rating
C_0	Static load rating
C_a	Semi-major axis coefficient of projected contact ellipse
C_b	Semi-minor axis coefficient of projected contact ellipse
C_σ	Maximum contact stress coefficient
C_δ	Relative elastic approach coefficient
D	Outside diameter of rolling bearing
D_{pw}	Pitch diameter of rolling bearing
D_m	Average diameter of rolling bearing
D_w	Rolling element diameter
d	Innerring diameter of rolling bearing
E	Modulus of elasticity
F	Applied load on support system
F_A	Applied axial load on support system
F_a	Applied axial load on rolling bearing
F_r	Applied radial load on rolling bearing
F_t	Gear drive circumference force
F_s	Gear drive radial force
f	Curvature radius coefficient of raceway groove
i	Numbers of rolling element rows in rolling bearing
J_a	Axial integral of load distribution
J_r	Radial integral of load distribution
J_1	Mean rolling element load integral of rotating ring

J_2	Mean rolling element load integral of static ring
K	Elastic deformation constant
L	Rating life of rolling bearing
L_s	Fatigue life corresponding to survival probability
L_{10}	Basic rating life that 10% of a group of rolling bearings will endure
L_m	Median life that 50% of a group of rolling bearing will endure
L_{na}	Adjusted fatigue life of arbitrary condition
L_{we}	Effect roller length
M	Bending moment
$\frac{1}{m}$	Poisson's ratio
N	Drive power
n	Rotation speed of rolling bearing
n_i	Rotation speed of inner ring
n_e	Rotation speed of outer ring
n_c	Rotation speed of cage
n_{ci}	Cage rotation speed relative with inner ring
n_{ec}	Outer ring rotation speed relative with cage
n_w	Rolling element rotation speed around self-center axis, or rolling element self rotation speed
O_i	Inner ring curvature center of raceway groove
O_e	Outer ring curvature center of raceway groove
P	Equivalent dynamic load
P_0	Equivalent static load
Q	Rolling element load
Q_c	Rolling element load rating
q	Parameter of curvature center distance
R	Curvature center
r	Curvature radius of raceway groove
S	Probability of survival (reliability)
G_r	Radial clearance
G_a	Axial clearance
V_i	Line velocity of inner ring contact point

VII

V_e	Line velocity of outer ring contact point
V_c	Line velocity of rolling element center
X	Radial factor
X_0	Static radial factor
Y	Axial factor
Y_0	Static axial factor
z	Numbers of rolling elements per row
z_o	Depth of maximum orthogonal shear stress
α	Nominal contact angle
α_i	Contact angle of rolling element with inner ring
α_e	Contact angle of rolling element with outer ring
α_d	Contact angle of rolling element end with ring rib
β	Load angle
γ	Bearing structure parameter
δ	Relative approach of contact bodies
δ_e	Relative approach at outer ring raceway contact
δ_i	Relative approach at inner ring raceway contact
δ_a	Relative axial displacement between inner ring and outer ring
δ_r	Relative radial displacement between inner ring and outer ring
δ_s	Plastic deformation
η	Reduction factor of dynamic rating load
λ	Reduction factor of dynamic rating load
θ	Turn angle of axis
ν	Adjustment factor of dynamic rating load
ρ	Curvature
ρ_{I1}	curvature of body I in plane 1
ρ_{I2}	curvature of body I in plane 2
ρ_{II1}	curvature of body II in plane 1
ρ_{II2}	curvature of body II in plane 2
Σ_p	Curvature sum
$F_{(p)}$	Curvature function
ψ	Angle of rolling bearing element with maximum loaded rolling element

ψ_o	Angle of rolling bearing load range
ω	Angular speed
ω_i	Inner ring angular speed
ω_e	Outer ring angular speed
ω_w	Self rotating angular speed of rolling element

Subscripts

i	Inner ring
e	Outer ring
c	Cage
w	Rolling element
a	Axial
r	Radial
p	Central circle
m	Average
min	Minimum
max	Maximum

Chapter 1 Introduction of Rolling Bearings	1
1.1 Rolling Bearing Characteristics	1
1.2 Rolling Bearing Classification and Suitable Scope	1
1.2.1 Rolling Bearing Structure Type Classification	2
1.2.2 Rolling Bearing Dimension Classification	4
1.2.3 Deep Groove Ball Bearings and Double Row Deep Groove Ball Bearings	5
1.2.4 Self-Aligning Ball Bearings	9
1.2.5 Angular Contact Ball Bearings and Double Row Angular Contact Ball Bearings	10
1.2.6 Single-Direction Thrust Ball Bearings and Double Direction Thrust Ball Bearings	14
1.2.7 Four-Point Contact Ball Bearings	16
1.2.8 Insert Ball Bearings with Plummer Block Housing	17
1.2.9 Cylindrical Roller Bearings	20
1.2.10 Tapered Roller Bearings	23
1.2.11 Spherical Roller Bearings and Thrust Spherical Roller Bearings	25
1.2.12 Needle Roller Bearings	28
1.2.13 Thrust Roller Bearings	32
1.2.14 Commonly Used Rolling Bearings Structure Type Classification	32
1.3 Identification Code of Rolling Bearing	43
1.3.1 New Rolling Bearing Identification Code in China	43
1.3.2 Identification Codes for Bearings with Subunit	62
1.4 Rolling Bearing Accuracy and Inspection	63

1. 4. 1	Tolerance Grades of Rolling Bearings	63
1. 4. 2	Symbols and Definitions	63
1. 4. 3	Tables of Rolling Bearing Tolerance and Accuracy	74
1. 4. 4	Inspection Method of Rolling Bearing Tolerance and Rotating Accuracy	101
1. 5	Materials for Rolling Bearings	145
1. 5. 1	Requirements for Rolling Bearing Materials	145
1. 5. 2	Generally Used Rolling Bearing Steel — High Carbon- Chromium Steel	146
1. 5. 3	Carburizing Rolling Bearing Steel	148
1. 5. 4	Medium Carbon Alloy Steel Used for Rolling Bearing Elements	150
1. 5. 5	Steel for Special Rolling Bearings under Special Hostile Operating Conditions	152
1. 6	Commonly Used Rolling Bearing Technical Terms (vocabulary) ...	167
1. 6. 1	Vocabulary Terms Related to Rolling Bearings	168
1. 6. 2	Terms Related to Rolling Bearing Parts	174
1. 6. 3	Terms Related to Rolling Bearing Arrangements and Subunits	184
1. 6. 4	Terms Related to Dimensions	186
1. 6. 5	Terms Related to Tolerance	191
1. 6. 6	Terms Related to Torque , Load and Life	191
1. 6. 7	Other Terms	195
Chapter 2	Rolling Bearing Basic Load Rating and Life	198
2. 1	Fundamental Concepts	199
2. 1. 1	Contact Angle	199
2. 1. 2	Rolling Element Load	201
2. 1. 3	Curvature Radius and Curvature	204
2. 1. 4	Osculation and Ratio of Radius of Curvature	204
2. 1. 5	Principal Plane	205
2. 1. 6	Curvature Sum $\sum \rho$ and Function $F(\rho)$	208
2. 1. 7	Contact Types	209

2. 1. 8	Relative Elastic Approach Quantity δ of Two Bodies	213
2. 2	Contact Stress and Deformation in Rolling Bearings	213
2. 2. 1	General Introduction	213
2. 2. 2	Point Contact	214
2. 2. 3	Line Contact	229
